

CONTENTS

	<u>Page</u>
<u>Introduction</u>	7
<u>Goal of the survey</u> : to estimate the maximum annual production capacity obtainable with the natural and technological limitations in the next 40 years	9
<u>Conventional and unconventional petroleum</u>	9
<u>Unconventional petroleum</u> : 1. Deep offshore petroleum. 2. Enhanced recovery. 3. Heavy oils. 4. Tar sands. 5. Oil shales. 6. Synthetic fuels.	10
<u>Outline of report; method followed; Delphi poll.</u>	12
<u>Part One. Conventional petroleum resources</u>	17
1.1. Difficulties and uncertainties in evaluating petroleum resources	17
1.1.1. General classification of mineral reserves and resources.	
1.1.2. Specific classification of petroleum reserves (proven, probable, possible).	
1.1.3. Uncertainty of evaluations particular to petroleum: recovery rate.	
1.1.4. Price and volume of reserves.	
1.1.5. Problem of possible resources and recourse to the Delphi poll.	
1.2. The 1976/77 Delphi poll	26
1.2.1. Poll, questionnaire, persons visited.	
1.2.2. <u>Results of poll.</u>	
1.2.3. Comments on world resources.	
1. Importance of Middle East/Africa.	
2. USSR/China.	
3. Depletion of conventional oil resources.	
4. Summary of the poll results.	

<u>Part Two.</u>	<u>Technical limitations to the future annual production of conventional oil</u>	47
2.1.	Breakdown into six zones	47
2.2.	Method of plotting curves for maximum technical capacity	47
2.2.1.	Cumulative discovery curves.	
2.2.2.	Curves for gross annual discoveries.	
2.2.3.	Annual technical production capacity curves.	
2.2.4.	<u>Explanation of curves.</u> Comparison with data from the WAES report (May 1977).	
2.3.	Conclusions on the proposed curves	60
2.3.1.	Choice of curves DI and DII (4 to 5 GT in 1990).	
2.3.2.	Critical nature of years 1985 to 1995.	
<u>Part Three.</u>	<u>Unconventional oil reserves and their mobilization</u>	63
	Little known in view of their reduced economic interest. 200 to 300 GT around year 2000 (between \$20 and \$25/bbl). Financial, technological, ecological and labor problems.	
3.1.	Oil shales	65
3.2.	Tar sands and heavy oils	69
3.3.	Enhanced recovery	77
3.4.	Oil under deep seas and in polar zones	83
3.5.	Fuel from coal or of vegetable origin	88
3.6.	Conclusion on unconventional oils	90

<u>Part Four.</u> <u>Conditions of access to maximum production capacities</u>	93
4.1. Financing; need for cooperation between governments and companies	94
4.2. Need for international cooperation	95
4.3. Technology (government incentives) and labor	96
4.4. Risk of "flattening out" of maximum production curves	96
4.5. Concluding note	97
4.6. But how to convince public opinion?	97

APPENDIXES

I. Delphi poll questionnaire and accompanying letter	101
II. Visits made in the course of the Delphi poll	109
III. Delphi poll analysis	111
IV. Methodology of the curves of technical maxima	165
V. General classification of mineral reserves, and classification of petroleum reserves and resources	169
VI. General observations expressed at the Round Table discussion (Istanbul, 21 September 1977)	171
VII. Figures	175
