

CONTENTS

<i>Preface</i>	v
----------------------	---

Chapter One

COMMUTING AND COMPUTING

1. Introduction	1
2. A Commuting Problem	3
3. Enumeration of Paths	4
4. Tree Diagrams	6
5. Timing and the Shortest Route	10
6. An Improved Map	12
7. The Array of Times	16
8. Arbitrary Starting Point	19
9. Minimum Time Functions	21
10. The Minimum Function	22
11. Equations for the f_i	25
12. Reduced Tree	27
13. General Map	28
14. Solving the Equations	30
15. Why Not Enumeration Using Computers?	32
16. Graphs	33
17. The Problem of the Königsberg Bridges	35
18. Systems and States	39
19. Critical Path Analysis	43
20. Summing Up	46
Bibliography and Comments	47

Chapter Two

THE METHOD OF SUCCESSIVE APPROXIMATIONS

1. Introduction	49
2. A Simple Example of Successive Approximations	50
3. A Simple Example of the Failure of the Method	53
4. Algorithms	54
5. Computer Programming	57
6. Algorithms for Solving $x = f(x)$	60

7.	The Newton–Raphson Method: Square Roots	63
8.	An Example	66
9.	Enter the Digital Computer	67
10.	Stop Rules	68
11.	Flow Charts for the Determination of \sqrt{a}	68
12.	What Initial Approximation?	69
13.	An Approximation Method of Steinhaus	70
14.	Successive Approximations for a Simple Routing Problem . . .	71
15.	The Map of Fig. 3 of Chapter One	73
16.	Determination of Optimal Policy	76
17.	A Different Initial Policy	77
18.	Successive Approximations for a General Map	79
19.	Computer Program	82
20.	The Connection Matrix and A Second Programming Method .	82
21.	Fictitious Links	85
22.	Paths With a Given Number of Junctions	86
23.	A Labelling Algorithm	90
24.	Working Back From the End	91
	Miscellaneous Exercises	94
	Bibliography and Comment	99

Chapter Three

FROM CHICAGO TO THE GRAND CANYON BY CAR AND COMPUTER: Difficulties Associated With Large Maps

1.	Introduction	101
2.	How to Plan a Vacation	102
3.	A Particular Initial Approximation	106
4.	The Peculiarities of Structure	106
5.	Computer Program	109
6.	Storage Considerations	110
7.	Use of Tapes	110
8.	Storage of Sparse Data	111
9.	Calculation of the t_{ij}	112
10.	Transformation of Systems	112
11.	Stratification	114
12.	Acceleration of Convergence	115
13.	Design of Electric Power Stations	118
	Miscellaneous Exercises	120
	Bibliography and Comments	121

Chapter Four

PROOF OF THE VALIDITY OF THE METHOD

1.	Will the Method Always Work?	123
----	--	-----

2.	Is There at Least One Solution ?	125
3.	How Do We Find the Desired Solution?	125
4.	Monotonicity	126
5.	The Upper Solution	127
6.	The Lower Solution	128
7.	Experimental Proof of Uniqueness	129
8.	Uniqueness of Solution	129
9.	Determination of Optimal Policy	131
10.	Arbitrary Initial Approximation	132
11.	Least Time to Move k Steps	133
12.	Number of Iterations	135
	Miscellaneous Exercises	137
	Bibliography and Comment	141

Chapter Five

JUGGLING JUGS

1.	A Classical Puzzle	142
2.	Precise Formulation	142
3.	Trial and Error	143
4.	Tree Diagrams	143
5.	Some Further Observations	147
6.	Enumeration by Computer	148
7.	A Geometrical Representation	149
8.	Cost Matrix	152
9.	Connection Matrix	154
10.	Minimum Cost Functions	155
11.	Powers of the Adjacency Matrix	155
12.	Functional Equations	156
13.	Successive Approximations	157
14.	The Labelling Algorithm	158
15.	Avoiding the Cost Matrix	160
16.	Another Initial Policy	161
17.	Getting Close	161
18.	Making the Closest Approach	163
19.	Calculation of $f_N(y, z)$	164
20.	Accessible and Inaccessible States	167
	Miscellaneous Exercises	168
	Bibliography and Comment	173

Chapter Six

**THE SAWYER GRAPH AND THE BILLIARD BALL
COMPUTER**

1.	The Sawyer Graph	174
----	------------------------	-----

2.	Analysis of the Sawyer Graph	177
3.	Connectedness of the Sawyer Graph	180
4.	The Spine of the Sawyer Graph	181
5.	The Case When c is a Divisor of b	182
6.	The General Case	183
7.	The Case when b and c Have No Common Factor.....	185
8.	The Billiard Ball Solution	187
9.	The Billiard Ball Diagram and Sawyer Graph	188
10.	Graphical Determination of Shortest Paths	189
11.	Discussion.....	192
12.	Computer Assistance in Drawing State Graphs.....	192
	Miscellaneous Exercises.....	193
	Bibliography and Comment	195

Chapter Seven

CANNIBALS AND MISSIONARIES

1.	Another Classical Puzzle.....	196
2.	Trees and Enumeration	197
3.	The State Diagram.....	198
4.	Existence and Uniqueness.....	200
5.	Analytic Methods	204
6.	Example	206
	Miscellaneous Exercises.....	209
	Bibliography and Comment	211

Chapter Eight

THE 'TRAVELLING SALESMAN' AND OTHER SCHEDULING PROBLEMS

1.	Introduction	213
2.	A Mathematician's Holiday	214
3.	A Map and a Matrix	214
4.	Enumeration.....	216
5.	A Simplified Version.....	216
6.	Recurrence Relations.....	217
7.	Do All the Errands!	218
8.	Feasibility.....	219
9.	How Many Errands Could We Do?	219
10.	Trading Time for Storage.....	220
11.	How to Build a Tennis Court.....	221
12.	Sequential Selection.....	222
13.	Feasibility.....	223
14.	Simplified and More Realistic Assignment Problem.....	224
15.	Constraints	225

16.	Discussion.....	225
17.	2^N	226
18.	A Branching Process.....	226
19.	Recurrence Relations.....	227
20.	Discussion.....	228
	Miscellaneous Exercises.....	228
	Bibliography and Comment.....	236
