CHAPTER 1	INTRODUCTION	1
CHAPTER 2	GENERALIZED HARMONIC ANALYSIS	4
A	Periodic Functions	5
	1. Exponential Form of Fourier Series	5
	2. Correlation	9
	3. Autocorrelation	11
	4. Illustrative Examples	14
	5. Crosscorrelation	17
	6. Illustrative Examples	22
	7. Convolution and Correlation	27
B	Aperiodic Functions (or Transient Functions)	32
	1. Fourier Transforms	32
	2. Correlation	36
	3. Autocorrelation	37
	4. Crosscorrelation	43
	5. Correlation and Convolution	45
C	Random Functions	50
	1. Introduction	50
	2. Autocorrelation	51
	3. Wiener Theorem for Autocorrelation	56
	4. Power Density Spectrum, Integrated Power Spectrum, and Their Interpretation	60
	5. Graphical Determination of Autocorrelation Function	66
	6. Further Discussion on Properties of Autocorrelation and Power Density Spectrum	69
	7. Derivatives of the Autocorrelation Function	72
	8. Summary of Properties of Autocorrelation	73
	9. Crosscorrelation	74

D Spectrums of Amplitude and Phase and Spectrums of Energy and Power	79
1. Introduction	79
2. Scope of the Wiener Theorem	79
3. Generalized Fourier Transforms	80
4. Quadratic Variation	83
5. Quadratic Variation for a Periodic Function	85
6. Quadratic Variation for a Transient Function	86
7. Quadratic Variation for Some Special Functions	87
8. Quadratic Variation for Continuing Functions	91
9. Relation between Integrated Fourier Transform and Autocorrelation	93
10. Proof of the Wiener Theorem for Autocorrelation	93
CHAPTER 3 PROBABILITY	105
1. Introduction	105
2. Statistical Regularity	107
3. Outcomes of a Random Experiment	110
4. Measure of Probability	112
5. Theorem of Total Probability	114
6. Theorem of Compound Probability	116
7. Bernoulli's Theorem	120
CHAPTER 4 RANDOM VARIABLES, ENSEMBLES, AND DISTRIBUTIONS	122
1. Discrete Random Variables	122
2. Continuous Random Variables	125
3. Variables with Continuous and Discrete Ranges	129
4. Representation of a Discrete Distribution as a Density	130
5. Integrated Probability Density	130
6. Remarks concerning the Basic Element of Probability for a Continuous Random Variable	131
7. Ensembles	133
8. Description of an Ensemble at One Point in Time; Stationary Ensembles	134
9. Description of a Stationary Ensemble at Two Points in Time	136
10. Some Properties of the Second Probability Density	141

11. An Example of the Second Probability Density 144
12. Description of a Stationary Ensemble at Three Points in Time 145
13. Complete Description of a Stationary Ensemble 147
14. Statistically Dependent Ensembles of Continuous Processes 149
15. Ensemble of a Discrete Random Process 150
16. Statistically Dependent Ensembles of Discrete Processes 153

CHAPTER 5 AVERAGES**155**

1. Average of a Discrete Random Variable 155
2. Average of a Continuous Random Variable 157
3. Moments 159
4. Some General Forms of Averages 160
5. Variance 162
6. Averages Involving Multiple Random Variables 164
7. Average of the Product of Independent Random Variables 168
8. Average and Average Square of the Sum of Random Variables 170
9. Characteristic Functions 172
10. Variance of the Sum of Random Variables 176

CHAPTER 6 THE POISSON DISTRIBUTION, THE NORMAL DENSITY, AND OTHER DENSITIES**177**

1. The Poisson Distribution 177
2. The Normal Density 186
3. The Sum of Normally Distributed Independent Variables 189
4. Transformation of Probability Densities 190
5. The Rectangular Density 194
6. The First Probability Density of an Ensemble of Periodic Functions 195

CHAPTER 7 TIME AVERAGES AND ENSEMBLE AVERAGES**200**

1. The Aggregate of Elements of an Ensemble Member and the Aggregate of Elements of the Ensemble at a Given Time 200

2. The Equivalence of the Time Average of an Ensemble Member and the Ensemble Average	202
3. Concerning the Justification for the Interchange of Time and Ensemble Averages	207
4. The Autocorrelation Function as a Time Average and as an Ensemble Average	209
5. General Forms of Equivalence of Time and Ensemble Averages	212
6. The Crosscorrelation Function as a Time Average and as an Ensemble Average	214
7. The Quasi-Ergodic Hypothesis for Correlation and Other Averages	214
CHAPTER 8 ANALYTICAL DETERMINATION OF CORRELATION FUNCTIONS AND POWER DENSITY SPECTRUMS OF RANDOM PROCESSES	219
1. Background of the Correlation Function	220
2. Autocorrelation of a Rectangular Wave with Poisson Distributed Zeros	221
3. Autocorrelation of a Pulse-Width Modulated Wave	225
4. Resolution of the Autocorrelation Function	232
5. Waveform Determination of Periodic Component in Random Wave	236
6. Autocorrelation of Poisson-Distributed Unit Impulses	240
<i>a. Equally Likely Positive and Negative Impulses</i>	241
<i>b. Impulses of the Same Sign</i>	244
<i>c. Alternately Positive and Negative Impulses</i>	245
CHAPTER 9 SUMMARY OF BASIC CONCEPTS AND TOOLS	257
CHAPTER 10 MEASUREMENT OF CORRELATION FUNCTIONS AND PROBABILITY DENSITIES	262
1. Measurement of Correlation Functions	262
2. Measurement of Probability Densities	268
CHAPTER 11 SAMPLING THEORY	278
1. Variance of Sample Mean of Independent Discrete Samples	278

2. Variance of Sample Mean of Dependent Discrete Samples 282
3. Variance of Sample Mean of Continuous Samples 285
4. An Example 286

CHAPTER 12 DETECTION OF A PERIODIC SIGNAL IN NOISE BY CORRELATION 288

1. Detection by Autocorrelation 288
2. Detection by Crosscorrelation 290
3. Calculation of Gain in Detection by Autocorrelation 291
4. Calculation of Gain in Detection by Crosscorrelation 299
5. Detection of Periodic Signal Waveform by Crosscorrelation with Periodic Impulses 303
6. Detection by Correlation and by Means of Linear Networks 312

CHAPTER 13 FUNDAMENTAL RELATIONS FOR A LINEAR SYSTEM AND CERTAIN APPLICATIONS 323

1. The Instantaneous Input-Output Relation 323
2. The Unit-Impulse Response-System Function Relation 328
3. The Transform of the Superposition Integral 330
4. Input-Output Relation in Autocorrelation 331
5. Input-Output Relation in Spectrum 332
6. Another Form of the Input-Output Relation in Autocorrelation 334
7. Application of Input-Output Relation in Autocorrelation to the Determination of Autocorrelation Functions of Poisson Waves 336
 - a. *Wave of Equally Likely Positive and Negative Pulses* 336
 - b. *Wave of Pulses of the Same Sign* 338
 - c. *Wave of Alternately Positive and Negative Pulses* 339
8. Input-Output Crosscorrelation Theorem 341
9. Determination of the Behavior of a Linear System by Crosscorrelation 342
10. Crosscorrelation of Linearly Transformed Random Functions 348

CHAPTER 14	OPTIMUM LINEAR SYSTEMS	355
1.	The Filter Problem and Some Generalizations	355
2.	The Mean-Square-Error Functional	358
3.	Calculus of Variations	360
4.	Minimization of the Mean-Square-Error Functional	364
5.	Some Aspects of the Wiener-Hopf Equation	369
6.	Location of Singularities of the Complex Fourier Transform of a Function Vanishing over a Half-Line	371
7.	Complex Fourier Transform of the Difference between the Input-Desired-Output Crosscorrelation and the Input-Output Crosscorrelation of the Optimum System	375
8.	Spectrum Factorization	376
9.	Solution of the Wiener-Hopf Equation by the Method of Spectrum Factorization	389
10.	Verification of the Solution of the Wiener-Hopf Equation	393
11.	Expression of the Solution of the Wiener-Hopf Equation in the Time Domain	394
CHAPTER 15	OPTIMUM FILTERING AND PREDICTION	396
1.	The Optimum Filter	396
2.	Illustrative Example in Optimum Filtering	397
3.	Optimum Zero-Lag Filter	401
4.	Optimum Prediction Filter	403
5.	The Optimum Pure Predictor	406
6.	An Interpretation of the Pure Predictor	410
7.	A Laboratory Demonstration of Prediction	417
8.	Contour Integration	418
9.	Example of Optimum System Expressed in the Time Domain	420
CHAPTER 16	ERRORS IN OPTIMUM SYSTEMS	427
1.	The Minimum Mean-Square Error	427
2.	Minimum Mean-Square Error and Irremovable Error in Optimum Filtering	429
3.	Minimum Mean-Square Error in Pure Prediction	433

CHAPTER 17 SOME PROBLEMS IN THE THEORY OF OPTIMUM SYSTEMS 440

1. Optimum Compensation 440
2. A Generalization of the Input and Desired Output 444
3. Optimum Systems on the Minimum-Integral-Square-Crosscorrelation-Error Criterion 448
4. The Minimum Integral-Square-Crosscorrelation Error 452
5. Optimum Systems with Transient Inputs on the Minimum-Integral-Square-Error Criterion 454

CHAPTER 18 REPRESENTATION OF CORRELATION FUNCTIONS AND POWER DENSITY SPECTRUMS BY ORTHONORMAL FUNCTIONS 459

1. Orthonormal Functions 460
2. Orthonormalization in the Time Domain 461
3. Representation of Correlation Functions by Orthonormal Functions 464
4. Representation of Power Density Spectrums by Orthonormal Functions 466
5. Method of Orthonormalization in the Frequency Domain 470
6. Laguerre Functions 473
7. Legendre Functions 476

CHAPTER 19 SYNTHESIS OF OPTIMUM LINEAR SYSTEMS BY MEANS OF ORTHONORMAL FUNCTIONS 481

1. Introduction 481
2. Networks Corresponding to the Orthonormal Set of Exponential Functions 483
3. Legendre Networks 486
4. Laguerre Networks 487
5. Fourier Networks 489
6. Hilbert Transforms 491
7. Approximation Mean-Square Error 500
