## CHAPTER 1 INTRODUCTION

1.1	The Human Side of Man-Computer Systems .....	1
1.1.1	Background .....	1
1.1.2	Requirements .....	2
1.2	The Present Situation of Relational Query Languages ...	3
1.2.1	Classification of Relational Query Languages ...	3
1.2.2	The Existing Query Languages .....	4
1.3	Problems With Individual Query Languages .....	6
1.3.1	Diversity .....	6
1.3.2	Flexibility .....	7
1.4	Objectives and Benefits of the ILEX System .....	7
1.5	The System Design Outline .....	9

## CHAPTER 2 ON RELATIONAL DATABASE SYSTEMS THROUGH LOGIC

2.1	Relational Databases .....	11
2.1.1	Terminology of Relational Model .....	12
2.1.2	The Example Databases .....	14
2.2	Logic Programming .....	17
2.2.1	The First Order Predicate Calculus .....	17
2.2.2	Clausal Form .....	19
2.2.3	Horn Clauses .....	20
2.3	PROLOG as a Logic Programming Language .....	21
2.3.1	A Brief View of PROLOG .....	22
2.3.2	Resolution Proof Procedures of PROLOG .....	23
2.3.3	Extralogical Facilities of PROLOG .....	25
2.4	The Relationships Between Logic and Relational Databases	26

## CHAPTER 3 A CANONICAL LOGIC FORM FOR QUERY LANGUAGES

3.1	General Comments Regarding the Unified Approach .....	29
3.1.1	Compatibility and Interference .....	29
3.1.2	Considerations of Query Processing .....	31
3.2	Query Formulation .....	33
3.3	Formal Definition of the Canonical Form .....	35
3.4	Relational Processing Capability of the Canonical Form	37

3.5 An Introductory Example .....	43
<b>CHAPTER 4 A PICTURE-LIKE LANGUAGE</b>	
4.1 QBE as a Candidate of the ILEX System .....	45
4.2 The Language PL .....	46
4.2.1 Retrieval Operations .....	46
4.2.2 Built-in Functions .....	51
4.2.3 Storage Operations .....	52
4.3 The Syntax of PL .....	55
4.3.1 Query Table Entry .....	55
4.3.2 Query Tuples .....	56
4.4. The Screen Editor of PL .....	57
4.4.1 User-System Interaction .....	57
4.4.2 Conversion .....	59
4.4.3 Digestion .....	60
4.4.4 Recognition .....	62
<b>CHAPTER 5 AN ENGLISH-LIKE LANGUAGE</b>	
5.1 SQL as a Candidate of the ILEX System .....	65
5.2 The Language EL .....	66
5.2.1 Retrieval Operations .....	66
5.2.2 Built-in Functions .....	70
5.2.3 Storage Operations .....	71
5.3 The Syntax of EL .....	73
5.4 The Parser of EL .....	74
5.4.1 Considering Keywords as Operators .....	75
5.4.2 Creation of Variables .....	78
5.4.3 The Treatment of Conditions .....	79
<b>CHAPTER 6 A MATHEMATICS-LIKE LANGUAGE</b>	
6.1 Relational Algebra Operations .....	87
6.2 The Language ML .....	88
6.2.1 The Syntax of ML .....	88
6.2.2 Simple Retrieval .....	89
6.2.3 Select-Project-Equijoin Expressions .....	89
6.2.4 Complex Queries .....	91
6.3 The Analyzer of ML .....	92
6.3.1 The Strategy of Algebra Manipulation .....	92
6.3.2 The Rule System .....	93
6.3.3 Unification of Arbitrary Algebra Queries .....	96
6.4 The Compatibility between ML and EL .....	101
6.4.1 Five Standardised Models .....	101
6.4.2 The ILEX Shared Bank .....	102
<b>CHAPTER 7 NEGATION AND AGGREGATION WITHIN THE SYSTEM ILEX</b>	
7.1 Treatment of Negation as Non-Provability .....	105
7.1.1 The Open and Close World Assumptions .....	106
7.1.2 Negation as Failure .....	106
7.2 The Second Order Predicates: "all", "group" and "update"	107
7.2.1 The Predicate "all" .....	107

7.2.2	The Predicate "group" .....	108
7.2.3	The Predicate "update" .....	109
7.3	Aggregate Functions in ILEX .....	110
7.3.1	Formal Definitions .....	110
7.3.2	The Implementation of Aggregate Functions .....	111
7.3.3	The Combination of Second Order Predicates .....	113
7.4	Extensibility of the Canonical Logic Form .....	115
<b>CHAPTER 8 QUERY OPTIMISATION BASED ON THE CANONICAL LOGIC FORM</b>		
8.1	The Strategy for Query Optimisation in ILEX .....	117
8.2	A Specific Cost Measure .....	118
8.2.1	The Significance of the Cost Measurement .....	118
8.2.2	A Cost Formula .....	119
8.3	Dynamic Optimisation .....	121
8.3.1	Assumptions .....	121
8.3.2	Ordering Goals in a Conjunction .....	122
8.3.3	The Implementation of the Optimisation Method ..	122
8.4	Potential Power For Improving Efficiency .....	124
<b>CHAPTER 9 THE ILEX SYSTEM ARCHITECTURE BASED ON MEMEX</b>		
9.1	Interface between PROLOG and RDBM .....	127
9.2	Content Addressing Mechanism .....	131
9.3	A Compression Technique Based on Zipf's Law .....	131
9.4	The Serial Associative System MEMEX .....	135
9.5	A Specialized Hardware Based on MEMEX .....	135
<b>CHAPTER 10 CONCLUSIONS AND FUTURE WORK</b>		
10.1	General Conclusions .....	141
10.2	Recommendation for Future Studies .....	145
<b>REFERENCES</b>	.....	147
<b>APPENDIX 1</b>	<b>BUILT-IN PREDICATES AND PRECEDENCES OF OPERATORS</b> ..	151
<b>APPENDIX 2</b>	<b>PROGRAMMING IN PROLOG</b> .....	157
<b>APPENDIX 3</b>	<b>THE RELATIONAL COMPLETENESS OF THE CANONICAL FORM</b> ..	169
<b>APPENDIX 4</b>	<b>SAMPLE QUERIES</b> .....	179
<b>INDEX</b>	.....	205
