

## CONTENTS

### GENERAL THEORY

#### The Elements of Digital Picture Processing

M. J. B. Duff

1.	Introduction . . . . .	1
2.	Unary and Binary Operations . . . . .	2
3.	Higher Order Operations . . . . .	4
4.	Serial or Parallel Processing . . . . .	6
5.	Propagation . . . . .	7
6.	Conclusions . . . . .	8
7.	References . . . . .	9

#### Some Neighborhood Operators

R. M. Haralick

1.	Introduction . . . . .	11
2.	Region Growing Operator . . . . .	12
3.	Nearest Neighbor Sets . . . . .	13
4.	Region Shrinking Operators . . . . .	13
5.	Mark Interior Border Pixels . . . . .	14
6.	Connectivity Number Operator . . . . .	15
6.1	Yokoi Connectivity Number . . . . .	15
6.2	Rutovitz Connectivity Number . . . . .	18
7.	Connected Shrink Operator . . . . .	18
8.	Pair Relationship Operator . . . . .	21
9.	Thinning Operator . . . . .	22
10.	Distance Transformation Operator . . . . .	23

11.	Contact Distances . . . . .	24
12.	Non-Minima-Maxima Operator . . . . .	25
13.	Relative Extrema Operator . . . . .	26
14.	Connected Components Operator . . . . .	31
15.	Reachability Operator . . . . .	33
16.	Conclusion . . . . .	34
17.	References . . . . .	34

## Region Relaxation in a Parallel Hierarchical Architecture

P. A. Nagin, A. R. Hanson, and M. Riseman

1.	Introduction . . . . .	37
1.1	The Need for Parallelism . . . . .	37
2.	A Parallel Hierarchical Architecture . . . . .	38
2.1	Modes of Processing and Algorithm Specification	40
2.2	Reductions: Upward Processing within the Cone	40
2.3	Horizontal (Lateral) Processing: At a Fixed Level in the Cone . . . . .	43
2.4	Projection: Processing Information Downward in the Cone . . . . .	43
3.	The Processing Cone as an Operating System for Image Analysis . . . . .	44
4.	Segmentation Algorithms and Applications . . . . .	46
4.1	Glucoma . . . . .	46
4.2	Image Analysis Using Histogram Cluster Labels	47
4.3	Refinement of Initial Labeling Using Spatial Relaxation . . . . .	50
4.4	Segmentation Algorithm Applied to a Natural Image . . . . .	51
5.	Localization . . . . .	54
5.1	Region Merging . . . . .	56
5.2	Results of Localization . . . . .	56
6.	Conclusion . . . . .	57
7.	Acknowledgements . . . . .	58
8.	References . . . . .	58

## Generalized Cellular Automata

A. Rosenfeld

1.	Introduction . . . . .	63
2.	One-Dimensional Cellular Automata . . . . .	63
3.	Multi-Dimensional Cellular Automata . . . . .	65
4.	Cellular Pyramids . . . . .	66
5.	Memory-Augmented Cellular Automata . . . . .	68
6.	Cellular Graphs . . . . .	69
7.	Concluding Remarks . . . . .	70
8.	Acknowledgements . . . . .	71
9.	References . . . . .	71

**Theoretical Considerations on a Family of Distance Transformations and Their Applications**

S. Yokoi, J-i. Toriwaki, and T. Fukumura

1. Introduction . . . . .	73
2. Basic Definitions . . . . .	75
3. Distance Transformation by Variable Operators (VODT) . . . . .	77
3.1 Distance Transformation by Variable Operators (VODT) . . . . .	78
3.2 DTLP (Distance Transformation of Line Pattern) . . . . .	80
3.3 The LMDT and Its Skeleton . . . . .	81
4. Generalized Grey Weighted Distance Transformation (GGWDT) . . . . .	86
4.1 GGWDT and IGGWDT . . . . .	86
4.2 Decomposition of Pictures by the GGWDT and Iterative Application of the GWDT . . . . .	90
5. Conclusion . . . . .	93
6. Acknowledgement . . . . .	94
7. References . . . . .	94

**LANGUAGES**

**Image Data Modeling and Language for Parallel Processing**

H. Enomoto, T. Katayama, N. Yonezaki, and I. Miyamura

1. Introduction . . . . .	95
2. Structure Lines . . . . .	96
3. Requirements for Feature Retrieval . . . . .	98
4. Language Requirements for Parallel Image Processing . . . . .	100
5. A Language for Parallel Processing with Non-Deterministic and Recursive Features . . . . .	102
6. Conclusion . . . . .	105
7. Acknowledgements . . . . .	105
8. References . . . . .	105

**A Study on Parallel Parsing of Tree Languages and Its Application to Syntactic Pattern Recognition**

N. S. Chang and K. S. Fu

1. Introduction . . . . .	107
2. Parallel Parsing of Tree Languages . . . . .	108
2.1 Tree Grammars . . . . .	108
2.2 Lexical Analyzer for Tree Grammars . . . . .	111
2.3 Parallel Parsing of Tree Languages . . . . .	113
2.4 Simulation Results . . . . .	116
3. Road Recognition by Using an Error-Correcting Tree Automaton . . . . .	121

3.1	Primitive Selection . . . . .	122
3.2	Grammar Construction . . . . .	123
3.3	Road Recognition . . . . .	126
4.	Conclusions . . . . .	127
5.	Acknowledgements . . . . .	127
6.	References . . . . .	128

**PIXAL: A High Level Language for Image Processing**

S. Levialdi, A. Maggiolo-Schettini, M. Napoli,  
and G. Uccella

1.	Introduction . . . . .	131
2.	Basic Features of the PIXAL Language . . . . .	133
2.1	Declaration . . . . .	133
2.2	Parallel Statements . . . . .	135
2.3	Global Assignment . . . . .	137
2.4	Composition of Sequential and Parallel Operations . . . . .	138
2.5	Built-In Functions . . . . .	138
3.	Implementation Considerations . . . . .	140
4.	Final Comments . . . . .	141
5.	References . . . . .	142

**Languages for Parallel Processing of Images**

K. Preston, Jr.

1.	Introduction . . . . .	145
2.	Languages for Image Analysis . . . . .	146
3.	Languages Associated with Parallel Processors . . . . .	149
3.1	MORPHAL . . . . .	150
3.2	CAP4 . . . . .	150
3.3	C3PL . . . . .	151
3.4	DAP FORTRAN . . . . .	152
3.5	GLOL . . . . .	152
3.6	PPL . . . . .	153
3.7	Other Languages . . . . .	153
4.	Examples of Use . . . . .	154
5.	Conclusions . . . . .	154
6.	References . . . . .	155

**TECHNIQUES**

**Real Time Region Analysis for Image Data**

Y. Fukada

1.	Introduction . . . . .	159
2.	Region Segmentation . . . . .	160

2.1 Properties of Images and Regions . . . . .	160
2.2 Spatial Clustering Algorithm . . . . .	161
3. Picture Processing Firmware . . . . .	163
3.1 Characteristics of Firmware . . . . .	163
3.2 Support Software . . . . .	164
3.3 Evaluation of Picture Processing Firmware . . . . .	165
4. Application of Image Data . . . . .	165
5. Conclusions . . . . .	168
6. Acknowledgements . . . . .	169
7. References . . . . .	169

**Hybrid Image Processing Using a Simple Optical Technique**

Y. Ichioka and S. Kawata

1. Introduction . . . . .	171
2. Interactive Image Processing System . . . . .	172
3. Adaptive Binarization Using Hybrid Processing . . . . .	174
3.1 Mathematical Analysis . . . . .	174
3.2 Optical Implementation . . . . .	175
4. Contrast Improvement and Feature Extraction by Hybrid Processing . . . . .	176
4.1 High Voltage Electron Microscope Images . . . . .	176
4.2 Extraction of Dislocation Lines . . . . .	178
5. Constant Variance Enhancement by Hybrid Processing . . . . .	178
6. Conclusion . . . . .	182
7. References . . . . .	182

**Focus of Attention in the Analysis of Complex Pictures**

Such as Aerial Photographs

M. Nagao

1. Introduction . . . . .	185
2. Selective Area Analysis . . . . .	186
2.1 Use of Context in Target Detection . . . . .	187
2.2 Planning Methods for Focusing Attention . . . . .	188
2.3 Application of Edge Preservation Smoothing . . . . .	188
3. Conclusions . . . . .	190
4. References . . . . .	191

**The Virtual Plane Concept in Image Processing**

T. Soma, T. Ida, N. Inada, and M. Idesawa

1. Introduction . . . . .	193
2. Virtual Tape . . . . .	195
3. Virtual Plane . . . . .	196
4. Implementation of the V-Plane Concept . . . . .	198
5. Conclusions . . . . .	200
6. Acknowledgements . . . . .	201
7. References . . . . .	201

## HARDWARE AND SYSTEMS

### A Multi-Microprocessor Architecture for Associative Processing of Image Data

H. Aiso, K. Sakamura, and T. Ichikawa

1. Introduction . . . . .	203
2. Principle of Association . . . . .	204
3. Associative Processing in a Semantic Data Base . . . . .	205
4. Multi-Microprocessor ARES . . . . .	206
4.1 Functional Configuration . . . . .	206
4.2 Cell Structure . . . . .	206
4.3 Multiple Response Resolver . . . . .	209
4.4 Distribution of Data in a Semantic Data Base . . . . .	212
5. Evaluation of the Optimum Number of Cells . . . . .	212
6. Conclusion . . . . .	217
7. Acknowledgements . . . . .	217
8. References . . . . .	217

### An Interactive Image Processing and Analysis System

S. Hanaki

1. Introduction . . . . .	219
2. Interactive Image Processing and Analysis Systems . . . . .	219
2.1 Man-Machine Interaction . . . . .	220
2.2 Speeding Up Processing . . . . .	220
2.3 Flexibility . . . . .	220
2.4 Cost Reduction . . . . .	220
2.5 Summary . . . . .	220
3. An I <sup>2</sup> PAS at NEC/CRL . . . . .	221
3.1 Color Image Display . . . . .	221
3.2 Computer and Peripherals . . . . .	223
3.3 Software and Applications . . . . .	223
4. Future Developments . . . . .	225
5. Conclusion . . . . .	225
6. Acknowledgement . . . . .	225
7. References . . . . .	225

### Interpolation to Reduce Difficulty in D/A Conversion

M. Hatori and Y. Taki

1. Introduction . . . . .	227
2. Interpolation of Samples . . . . .	227
3. Estimation of the Value to be Interpolated . . . . .	229
4. Implementation of the Interpolator . . . . .	234
5. Experimental Result . . . . .	236
6. Conclusion . . . . .	240
7. References . . . . .	240

**A Computing System Organization for Image Data Retrieval**

T. Ichikawa and H. Aiso

1. Introduction . . . . .	241
2. System Organization . . . . .	242
2.1 The ARES for Associative Search of Semantic Data Bases . . . . .	242
2.2 The ELPIS for Image Feature Extraction . . . . .	245
3. Image Feature Extraction Facility . . . . .	248
3.1 Feature Extraction by Content Addressing . . . . .	248
3.2 Control of Detailed Fineness . . . . .	251
4. Concluding Remarks . . . . .	252
5. Acknowledgements . . . . .	254
6. References . . . . .	254

**A Compound Computer System for Image Data Processing**

J. Iisaka, S. Ito, T. Fujisaki, and Y. Takao

1. Introduction . . . . .	257
2. Shared Intelligent I/O Controller (ETOILE) . . . . .	258
2.1 Programmable I/O Controller . . . . .	258
2.2 Host-Controller Communication Facility . . . . .	259
2.3 I/O Peripherals . . . . .	259
2.4 User-Friendly Interface (UFI) . . . . .	259
2.5 The ETOILE Supervisor . . . . .	260
2.6 Subsystems . . . . .	260
3. Image Data Base . . . . .	260
3.1 System Overview . . . . .	261
4. Special-Purpose Processor . . . . .	262
4.1 Structure of Special-Purpose Processor . . . . .	263
4.2 Parallel Processing Schemes . . . . .	264
5. Conclusion . . . . .	265
6. Acknowledgements . . . . .	265

**Interactive Techniques for Producing and Encoding Color  
Graphics**

T. Kamae, T. Hoshino, M. Okada, and M. Nagura

1. Introduction . . . . .	267
2. Interactive Production of Color Graphics . . . . .	268
2.1 Input of Line Drawings . . . . .	268
2.2 Trimming Lines . . . . .	268
2.3 Detection of Uncolored Closed Areas . . . . .	268
2.4 Coloring . . . . .	270
2.5 Outline of the Experimental System . . . . .	270
3. Encoding of Color Graphics . . . . .	270
3.1 Color Run-Length Coding . . . . .	270
3.2 Boundary Coding . . . . .	271
4. Concluding Remarks . . . . .	277
5. References . . . . .	277

## **Image Processing Unit Hardware Implementation**

M. Kidode, H. Asada, H. Shinoda, and S. Watanabe

1.	Introduction . . . . .	279
2.	Design Concepts . . . . .	280
2.1	Image Data Hierarchies . . . . .	280
2.2	Important Image Processing Functions . . . . .	280
2.3	Local Parallel Operations . . . . .	282
2.4	Flexible Control . . . . .	283
2.5	Word Length . . . . .	283
3.	Hardware Implementation . . . . .	283
3.1	Microprogram Control and ALU . . . . .	285
3.2	Address Control . . . . .	285
3.3	Data Memory and Table Memory . . . . .	286
3.4	Spatial Filtering . . . . .	287
3.5	Fast Transform with Multiplier and Adder . . . . .	287
3.6	Logical Filtering . . . . .	289
3.7	Region Labeling . . . . .	290
4.	Software Implementations and Applications . . . . .	290
4.1	Functional Commands for the IPU . . . . .	290
4.2	Microprograms in the IPU . . . . .	292
4.3	Applications . . . . .	292
5.	Conclusion . . . . .	295
6.	Acknowledgements . . . . .	295
7.	References . . . . .	295

## **Man-Machine Interactive Processing for Extracting Meteorological Information from GMS Images**

N. Kodaira, K. Kato, and T. Hamada

1.	Introduction . . . . .	297
2.	GMS Cloud Top Height Estimation System . . . . .	298
2.1	Basic Equation . . . . .	298
2.2	Basic Parameters . . . . .	299
2.3	Conversion to Cloud Top Height . . . . .	301
2.4	System Configuration and Function . . . . .	301
3.	GMS Cloud Wind Estimation System . . . . .	306
3.1	GMS Cloud Wind Estimation System . . . . .	307
3.2	Registration of Images . . . . .	307
3.3	Wind Derivation . . . . .	309
3.4	Quality Control in the CWES System . . . . .	316
3.5	Delivery and Archiving . . . . .	321
4.	References . . . . .	321

## **An Array Processor for Image Processing**

H. Matsushima, T. Uno, and M. Ejiri

1.	Introduction . . . . .	325
2.	Design Principles . . . . .	326
2.1	The Memory Unit . . . . .	326
2.2	The Processing Unit . . . . .	326

2.3	The Array . . . . .	326
2.4	The Processing Element . . . . .	327
2.5	Programming . . . . .	327
3.	System Construction . . . . .	327
3.1	System Outline . . . . .	327
3.2	Control Memory . . . . .	328
3.3	Central Processing Unit . . . . .	329
3.4	Micro Instruction Controller . . . . .	329
3.5	Picture Memory . . . . .	329
3.6	Processing Element Array . . . . .	330
3.7	Local Register . . . . .	330
3.8	Input Output Controller . . . . .	331
4.	Parallel Processing . . . . .	331
4.1	Processing Element . . . . .	331
4.2	Data Supply to the Processing Element Array . . . . .	334
4.3	Processing Element Array Execution Mode . . . . .	334
5.	Examples . . . . .	335
5.1	Thresholding . . . . .	335
5.2	Filtering . . . . .	336
6.	Conclusion . . . . .	337
7.	Acknowledgements . . . . .	337
8.	References . . . . .	338

**Real-Time Shading Corrector for a Television Camera Using  
a Microprocessor**

M. Onoe, M. Ishizuka, and K. Tsuboi

1.	Introduction . . . . .	339
2.	Hardware Configuration . . . . .	341
2.1	Operational Details . . . . .	341
2.2	Correction Mode . . . . .	342
3.	Operation Flow . . . . .	344
4.	Conclusion . . . . .	344
5.	Acknowledgement . . . . .	346
6.	References . . . . .	346

**Parallel Architectures for Image Processing**

S. R. Sternberg

1.	Introduction . . . . .	347
2.	The Binary Image . . . . .	348
3.	Binary Image Transforms . . . . .	348
3.1	Geometric Transforms . . . . .	348
3.2	Logical Transforms . . . . .	348
3.3	Dilation and Erosion . . . . .	349
3.4	General Comparison . . . . .	351
4.	Hardware Implementation . . . . .	352
4.1	Optomechanical Model . . . . .	353
4.2	Binary Cell Arrays . . . . .	353
4.3	Computational Efficiency . . . . .	354
4.4	Window Configurations . . . . .	357

5.	Array Architectures . . . . .	357
5.1	Pipelined Processor . . . . .	357
6.	Conclusion . . . . .	359
<b>Color Display for Image Processing with Multiple Functions</b>		
M. Takagi and M. Onoe		
1.	Introduction . . . . .	361
2.	Design Principles . . . . .	362
2.1	Multiple Image Storage in the IC Memory . . . . .	362
2.2	Arithmetic Operations on Each Picture Element . . . . .	362
2.3	Access to the Displayed Data . . . . .	363
2.4	Access from Multiple Computers . . . . .	363
3.	System Configuration . . . . .	363
4.	Utilization of Image Memory . . . . .	364
5.	Capabilities . . . . .	367
5.1	Data Input and Output . . . . .	367
5.2	Switching of Monitors . . . . .	367
5.3	Pseudocolor Display . . . . .	367
5.4	Mosaic Display . . . . .	367
5.5	Display of Moving Images . . . . .	367
5.6	Roll-up . . . . .	368
5.7	Joystick . . . . .	368
5.8	Vector Display . . . . .	368
5.9	Character Display . . . . .	368
5.10	Pointer Display . . . . .	368
5.11	Variable Display Range . . . . .	368
5.12	Arithmetic Operations . . . . .	369
5.13	Image Input . . . . .	370
6.	Conclusion . . . . .	370
<b>Image Processing Oriented Multiprocessor System with a Multipurpose Video Processor</b>		
A. Tojo and S-i. Uchida		
1.	Introduction . . . . .	371
2.	Interconnection Structure and Organization of the System . . . . .	372
3.	Intelligent Coupler and Implementation of Parallel Processing . . . . .	374
4.	Function and Organization of the Video System . . . . .	377
5.	Conclusion . . . . .	379
6.	Acknowledgements . . . . .	379
7.	References . . . . .	380
