
CONTENTS

Preface	v
1 Mathematical Aspects of the Systems Engineering Process	iii
1. The Systems Engineering Process	1
2. Optimal System Design Selection	5
3. System Cost and Effectiveness	8
4. System Measures	11
5. Cost versus Effectiveness Analysis	16
6. Mathematical Processes	21
7. Optimization and Probabilistic Aspects	23
References	25
Exercises	26

- 2 Calculus Techniques in Optimization 29**
 - 1. Introduction 29
 - 2. Maxima and Minima 30
 - 3. Necessary and Sufficient Conditions 31
 - 4. Application to Inventory Systems 33
 - 5. Monotone Functions 37
 - 6. Convex Sets and Functions 39
 - 7. Functions of Discrete Variables 42
 - 8. Examples of Discrete Variable Functions 43
 - 9. The Lagrange Multiplier Method 47
 - 10. Applications of the Lagrange Multiplier Method 49
 - 11. An Approximation Technique 55
 - References 58
 - Exercises 59

- 3 Linear Programming 65**
 - 1. Introduction 65
 - 2. Production Example 68
 - 3. System Reliability Example 69
 - 4. Circuit Design Example 71
 - 5. Project Scheduling Example 73
 - 6. Basic Results of Linear Programming 76
 - 7. Example of the Basic Result 81
 - 8. Simplex Method 83
 - 9. Example of the Simplex Method 88
 - 10. Two-Phase Simplex Method 90
 - 11. Example of the Two-Phase Method 93
 - 12. Primal-Dual Problem 94
 - References 97
 - Exercises 98

- 4 Recursion Techniques 106**
 - 1. Introduction 106
 - 2. Recursion in Series Systems 108
 - 3. Recursion in Parallel Systems 111
 - 4. Computational Considerations 115
 - 5. Generating Function Technique 116
 - 6. Separable Objective Functions 119
 - 7. Optimization of Separable Functions 120

8. Application to Reliability Allocation	128
9. Application to Failure Rate Apportionment	131
10. Solution of an Integer Programming Problem	134
11. Special Recursion Algorithm for Integer Variables	137
References	138
Exercises	139
5 System Reliability	145
1. Introduction	145
2. The Reliability Function	146
3. System Failure Rate	148
4. System Mean Time Before Failure	150
5. Topological Reliability	151
6. Structures and Structure Functions	155
7. Reliability of Structures	158
8. Series Systems	161
9. Parallel Systems	162
10. (k, n) Systems	164
11. Series-Parallel Systems	167
12. Parallel-Series Systems	169
13. Standby Systems	169
14. Systems Subject to Two Types of Failure	172
15. Reliability Allocation	177
References	181
Exercises	182
6 Systems With Repair	187
1. Introduction	187
2. System Maintainability	188
3. Systems of Order 2	190
4. $(1, 2)$ Systems with Arbitrary Repair	195
5. (m, n) Systems with Parallel Repair	200
6. Standby Systems with Parallel Repair	207
7. Repair as a Renewal Process	211
8. Renewal Function	214
9. Two-State System	218
10. Distribution of System Failures	223
11. Preventive Maintenance Considerations	225
12. Distribution of System Downtime	230
References	232
Exercises	232

7	<i>System Availability and Dependability</i>	238
1.	Introduction	238
2.	System Availability Measures	240
3.	A One-Unit System	244
4.	Renewal Theory Considerations	245
5.	(m, n) Systems with Parallel Repair	247
6.	Series Systems with Repair	253
7.	Standby Systems with Repair	255
8.	Preventive Maintenance Considerations	259
9.	Tradeoffs in Availability	261
	References	267
	Exercises	267
8	<i>Systems with Spares</i>	272
1.	Introduction	272
2.	Basic Sparing Criteria	273
3.	Standby Systems	276
4.	(m, n) Systems	283
5.	Series Systems	288
6.	Simple Parallel Systems	291
7.	System Measures	292
8.	Value Engineering Application	295
9.	Determination of the Spares Kit	296
10.	Sparing for Replacement	299
	References	304
	Exercises	305
9	<i>Markov Techniques</i>	309
1.	Introduction	309
2.	Definition of a Markov Process	310
3.	Discrete Parameter Markov Chains	313
4.	Two-State Markov Chains	318
5.	Examples of Discrete Parameter Markov Chains	321
6.	Canonical Form of the Transition Matrix	329
7.	Existence of Stationary Probabilities	334
8.	Replacement Example	336
9.	Continuous Parameter Markov Chains	339
10.	Birth and Death Processes	345
	References	349
	Exercises	350

10 Queuing Systems	355
1. Introduction	355
2. System Measures	357
3. Deterministic Queues	360
4. Arrival Time Distributions	362
5. Service Time Distributions	363
5. Systems with One Service Center	366
7. Systems with Parallel Service Centers	374
8. Multiple Service Center System Examples	378
9. Applications to Inventory Operation	385
10. Nonparallel Service Centers	389
References	395
Exercises	396
Index	401
