<i>Preface by Roger C. Schank</i>	xiii
<i>Acknowledgements</i>	xix
<i>Introduction</i>	xxi

CHAPTER ONE

Natural Language Understanding by People	1
---	---

1.1	Language Understanding and World Knowledge	1
1.2	Language Understanding and Thinking	3
1.2.1	Inference	3
1.2.2	Expectations	7
1.2.3	Ambiguity	9
1.3	The Process of Language Understanding	10
1.3.1	Syntax, Semantics and Pragmatics	10
1.3.2	Understanding Connected Discourse	12
1.3.3	Learning to Think	16
1.3.4	Learning to Understand	17
1.4	Summary	18

CHAPTER TWO

Natural Language Understanding by Computers	21
--	----

2.1	Natural Language Processing Without Understanding	22
2.2	What Does it Mean for a Computer Program to Understand?	25

2.2.1	The Representation of Meaning in Human Memory	25
2.2.1.1	The Representation of Meaning Cannot be Word-based.	26
2.2.1.2	The Representation of Meaning Must Be Language Independent.	27
2.2.2	Conceptual Dependency	27
2.2.2.1	The Primitive ACTs.	29
2.2.2.2	States.	31
2.2.2.3	Instrumentality.	32
2.2.2.4	Causality.	33
2.2.3	The Process of Computer Understanding	33
2.2.3.1	Conceptual Analysis.	34
2.2.3.1.1	The dictionary.	34
2.2.3.1.2	The conceptual dependency parsing process.	35
2.2.3.1.3	Disambiguation.	39
2.2.3.2	The Inference Mechanism.	40
2.2.3.3	MARGIE.	40
2.2.4	Knowledge Structures	42
2.2.4.1	Scripts.	43
2.2.4.2	Plans and Goals.	44
2.2.4.3	Semantic Networks.	45
2.3	Theoretical Issues in Natural Language Processing	47
2.3.1	Representational Issues	47
2.3.1.1	What Constitutes a Good Representation.	49
2.3.2	Syntax vs. Semantics	50
2.3.2.1	The Intermediate Syntactic Representation.	50
2.3.2.2	The Need for Syntactic Processing.	51
2.3.2.3	The Autonomous Syntax Debate.	52
2.4	Historical Perspective	53
2.5	Summary	55

CHAPTER THREE

Artificial Intelligence in the Commercial World

57

3.1	Defining Artificial Intelligence	57
3.2	Expert Systems	59

3.2.1	How Expert Systems Work	61
3.2.2	Advantages of Expert Systems	63
3.2.3	Limitations of Expert Systems	65
3.3	Expert Systems and Natural Language	69
3.4	Summary	71

CHAPTER FOUR

Retrieving Information from Computer Data Bases

73

4.1	Data Base Terminology	73
4.2	Programming Languages	76
4.3	Query Languages	78
4.3.1	Power vs. Ease of Use in Query Language Design	80
4.3.1.1	Multi-file Data Base Query Languages.	80
4.3.1.2	Retrieval From Multiple Files Within the Same Query.	81
4.3.2	English-like Query Languages	84
4.3.2.1	English-like query languages for multi-file data bases.	85
4.3.2.2	English-like queries involving multiple file access.	86
4.3.2.2.1	Predefined views.	87
4.3.2.2.2	Automatic navigation.	88
4.3.3	Limitations of English-like Query Languages	89
4.3.3.1	Limitations of Predefined Views.	91
4.3.3.2	Limitations of Automatic Navigation.	95
4.3.4	Expert Systems and Query Languages	97
4.3.5	Report Generation	98
4.3.5.1	Sorting.	98
4.3.5.2	Grouping and Summarization.	99
4.3.5.3	Computations.	100
4.3.5.4	Other Formatting Options.	100
4.4	Menu Systems	101
4.4.1	Menu System Data Base Query	101
4.4.2	Iconic Menu Systems	102
4.4.3	Natural Language Menu Systems	102
4.4.4	The Yellow Pages Problem	104
4.5	Report-based Information Delivery	105

4.5.1	The Problem with Standard Reports	107
4.5.2	Standard Report Menus	108
4.5.2.1	Accessing Reports Through Menus.	109
4.5.2.2	Natural Language Access to Report Menus.	110
4.5.2.2.1	Keyword access to report menus.	111
4.5.2.2.2	Pattern recognition access to report menus.	111
4.5.2.2.3	"Best guess" access to report menus.	112
4.5.3	The Information Center	112
4.6	Summary	114

CHAPTER FIVE

Data Base Retrieval Using Natural Language 117

5.1	Natural Language Report Generation	118
5.2	Natural Language Input vs. Formal Language Input	131
5.2.1	Understanding Ambiguous and Implicit Content	142
5.2.2	Recognition of Nominal Data References	149
5.2.3	Processing Temporal References	156
5.3	Natural Language and Speech Recognition	156
5.4	Summary	159

CHAPTER SIX

Domain-Independent Natural Language Interfaces 161

6.1	How Domain-Independent Systems Work	162
6.1.1	Display Fields	163
6.1.2	Selection	168
6.1.3	Nominal Data References	170
6.1.4	Pseudo-field References	171
6.1.4.1	Computation Definitions.	171
6.1.4.2	Macro-field Selection Definitions.	171
6.1.4.3	Default Display Fields.	172
6.1.4.4	Multiple Display Field Definitions.	173
6.1.5	Sorting	173
6.1.6	Multiple File Data Bases	174

<i>Contents</i>		ix
6.1.7	Summarization	176
6.1.8	Ambiguity	177
6.2	Limitations of Domain-independent Language Systems	181
6.3	Summary	187
 CHAPTER SEVEN		
	Knowledge-Based Natural Language Interfaces	189
7.1	The Intermediate Meaning Representation	189
7.1.1	Example 1: Queries Concerning the Concept of "Debt"	192
7.1.2	Example 2: Queries Containing Temporal References	194
7.1.3	The Advantage of Having an Intermediate Meaning Representation	200
7.2	How Knowledge-based Interfaces Work	200
7.2.1	The CONCEPTUAL ANALYZER	201
7.2.2	The APPLICATION EXPERT	202
7.2.3	The DATA BASE EXPERT	204
7.3	The Development of Knowledge-based Interfaces	205
7.3.1	Creating the Application-specific Lexicon	206
7.3.2	Creating Conceptual Entities	207
7.3.3	Creating Disambiguation Rules	209
7.3.4	Creating Application-specific Inference Rules	210
7.3.5	The Development of Data Base Expert System Rules	211
7.4	Summary	211
 CHAPTER EIGHT		
	Evaluating Natural Language Interfaces	213
8.1	Tools vs. Applications	213
8.1.1	Evaluating Applications	213
8.1.2	Evaluating Tools	214
8.2	Performance	217
8.2.1	Robustness	217
8.2.2	Syntactic Competence	219

8.2.2.1	Syntactic Ambiguity.	219
8.2.2.2	Negation.	220
8.2.2.3	Pronominalization.	220
8.2.2.4	Other Forms of Intersentential Reference.	221
8.2.2.5	Ungrammatical Sentences.	221
8.2.2.6	Conjunctions.	222
8.2.2.7	Other Forms of Syntax.	223
8.2.3	Semantic Competence	223
8.2.3.1	Processing of Nominal Data.	223
8.2.3.2	Dates.	225
8.2.3.3	Numbers.	226
8.2.4	Efficiency of Generated Retrieval Code.	226
8.2.4.1	Use of Data Base Indices.	227
8.2.4.2	Accessing Nominal Data.	227
8.2.4.3	Choice of Navigation Paths.	228
8.2.4.4	Expensive Query Traps.	228
8.2.5	Friendliness	229
8.2.5.1	On-line Help.	229
8.2.5.2	Request Paraphrasing.	230
8.2.5.3	Spelling Correction.	230
8.2.5.4	Lack of Vocabulary.	231
8.2.5.5	Informative Clarification Dialogues.	232
8.2.5.6	Disambiguation Dialogues.	233
8.2.5.7	When the System Cannot Answer the Query.	233
8.3	Summary	234

CHAPTER NINE

Conversational Advisory Systems 237

9.1	An Example: Le Courtier	237
9.2	How Conversational Advisory Systems Work	243
9.2.1	The CONCEPTUAL ANALYZER	244
9.2.2	The Dialogue Expert	245
9.2.2.1	Topic Switching and Volunteered Information.	245
9.2.2.2	Conversational Boundaries.	246
9.2.2.3	Rule Maintenance.	247

9.2.2.4	Explanation.	247
9.2.2.5	Natural Language Generation.	248
9.3	Conversational Interfaces to Expert Systems	
	Revisited	248
9.3.1	Incremental Functionality	249
9.3.1.1	Expert Systems Assume an Understanding of Terminology.	249
9.3.1.2	Expert Systems Require the User to Make Complex Judgements.	249
9.3.1.3	Expert Systems and Menus.	251
9.3.2	Incremental Development Cost	252
9.3.2.1	TAXADVISOR: Extremely High Incremental Cost.	253
9.3.2.2	XCON: Much Lower Incremental Cost.	255
9.4	Summary	256

CHAPTER TEN

The Commercial Impact of the Technology 257

10.1	The Recent Past: Commercializing AI Technology	257
10.1.1	Stage 1: Capital Investment	257
10.1.2	Stage 2: The Development of AI Tools	258
10.1.2.1	AI Workstation Tools.	258
10.1.2.2	Expert System Tools.	260
10.1.2.3	Natural Language Tools.	260
10.1.3	Stage 3: The Emergence of AI Applications	260
10.2	The Near Term Future: The Market for Applications of Today's AI Technology	262
10.2.1	Information Retrieval	263
10.2.1.1	The Corporate Marketplace.	263
10.2.1.2	The Consumer Marketplace.	265
10.2.2	Advice and Services	270
10.2.2.1	The Corporate Marketplace.	270
10.2.2.2	The Consumer Marketplace.	272
10.3	The Longer-Term Future: Applications Requiring Technology Still in the Laboratories	274

10.3.1	Knowledge Limitations of Near-Term Products	274
10.3.2	The AI Frontier: Automatic Knowledge Acquisition	275
10.4	Closing Comments	277
<i>Bibliography</i>		281
<i>Index</i>		291
