FOREWORD III

ACKNOWLEDGMENTS IV

CHAPTER 1. INTRODUCTION 1
- Purpose and Scope 1
- Definition of Ceramics 2
- Ceramics in Electronic Systems 3

CHAPTER 2. CERAMIC AND GLASS INSULATORS 9
- Types of Electrical Insulation 9
- Ceramic Insulators 10
- Glass Insulators 23
- Joining 30
- NASA Contributions 31

CHAPTER 3. CERAMICS AND GLASSES IN RESISTORS 39
- Discrete Resistors 39
  - Carbon Composition Resistors 40
  - Discrete Film Resistors 43
  - Wirewound Resistors 46
  - Chip Resistors 47
  - Special Resistors 49
- Film Resistors for Microelectronics 50
  - Thick-Film Resistors 52
    - Silver-Palladium/Palladium Oxide Systems 52
    - Ruthenium Oxide System 54
    - Thallium Oxide System 54
    - Other Systems 56
    - Theories of Conduction in Metal-Glass Films 56
  - Thin-Film Resistors 57
- NASA Contributions 58

CHAPTER 4. CERAMIC AND GLASS CAPACITORS 63
- Classification of Capacitors 64
- Ceramic Capacitors 65
  - Temperature Compensating Capacitors 65
  - High Dielectric Constant Capacitors 68
  - Semiconducting Ceramic Capacitors 70
  - Configurations and Designs 72
- Glass and Glass-Ceramic Capacitors 74
- Substrate and Film Capacitors 76
  - Substrate Capacitors 76
  - Thick-Film Capacitors 78

Page

Thin-Film Capacitors 79
Tantalum Integrated Capacitors 81
NASA Contributions 82
CHAPTER 5. CERAMICS AND GLASSES IN MICROCIRCUITRY 89
Ceramics and Glasses in Film Technologies 91
Substrates 91
Crossovers and Passivation 99
Ceramics and Glasses in Monolithic Integrated Circuitry 102
Packaging 105
NASA Contributions 111
New Designs in Microcircuitry 111
New Film Preparation Techniques 119
Information Transfer 124
CHAPTER 6. TECHNOLOGY TRANSFER TO NONAEROSPACE USES 127
Designing Ceramics Into Microcircuitry 127
Electrical Properties 129
Thermal Dissipation 129
Environmental Considerations 131
Reliability 132
Design Flexibility 132
Trends in Ceramics for Devices 133
The Process of Technology Transfer 135
Microelectronics in Nonaerospace Applications 138
