

# Contents

Preface	v
<b>1 FOUNDATIONS</b>	<b>1</b>
1-1 Probability and Measure	2
1-2 Integration Theory	15
<b>2 RANDOM VARIABLES</b>	<b>21</b>
2-1 Distribution Functions and Density Functions	22
2-2 Expected Values	28
2-3 Moments	30
2-4 Characteristic Functions	33
2-5 Vector Random Variables and Joint Distribution Functions	35
2-6 Correlation Coefficient and Least-squares Regression	43
2-7 Gaussian Random Variables	47
<b>3 RANDOM PROCESSES</b>	<b>54</b>
3-1 Statistics of Random Processes	55
3-2 Relating Time and Ensemble Statistics	62
3-3 Summary of the Analysis of Linear Systems	71
3-4 Correlation Functions and Spectra	79
3-5 Gaussian Random Processes	89
3-6 The Poisson Process	93
<b>4 OPTIMUM FILTERING</b>	<b>104</b>
4-1 Matched Filter for Pulse Signal	105
4-2 Least-squares Filtering without Constraints	109
4-3 Optimization within the Realizability Constraint	113
4-4 Discussion of Extensions	122
<b>5 INTRODUCTION TO COMMUNICATIONS AND RADAR WITH ADDITIONAL RESULTS ON OPTIMUM FILTERING</b>	<b>130</b>
5-1 Model for Communications and Radar	130
5-2 Bandpass Signals and Systems	148
	ix

5-3	Conjugate Linear Filtering and Phase Lock	157
5-4	Strong Results in the Gaussian Case	169
<b>6</b>	<b>DETECTION THEORY</b>	<b>179</b>
6-1	General Theory	180
6-2	Detection of a Signal in Noise	184
6-3	Signals with Parameters	193
6-4	Parameter Estimation	196
<b>7</b>	<b>INFORMATION THEORY WITH APPLICATIONS TO COMMUNICATIONS</b>	<b>204</b>
7-1	Formalities	207
7-2	Source Coding	213
7-3	Channel Coding Theorem	226
7-4	Description of Applications	232
7-5	Angle-modulation Systems	234
<b>8</b>	<b>SOME ASPECTS OF RADAR THEORY</b>	<b>244</b>
8-1	Synthetic-aperture Radar	245
8-2	Ambiguity Functions and Parameter Estimation	259
8-3	Effects of Phase Errors	274
	<b>APPENDIX 1—PROOFS OF BASIC THEOREMS OF INTEGRATION</b>	<b>287</b>
	<b>APPENDIX 2—COMPLEMENTS ON TIME AND ENSEMBLE AVERAGES</b>	<b>295</b>
	<b>APPENDIX 3—MODES OF CONVERGENCE</b>	<b>305</b>
	Bibliography	313
	Index	319
