

Contents

1. THE MECHANISM OF HEAT CONDUCTION	1
1.1 Fourier's Law of Heat Conduction	1
1.2 Derivation of Basic Equation of Heat Conduction	2
1.3 Steady-State Unidirectional Conduction	5
1.4 Thermal Resistance of Composite Bodies	5
1.5 Values of Thermal Conductivity	6
1.6 Values of Thermal Conductivity of Gases	7
1.7 Values of Thermal Conductivity of Liquids	8
1.8 Thermal Conduction in Solids	9
1.9 Values of Thermal Conductivity of Solids	11
1.10 Insulation	13
2. RADIANT HEAT TRANSFER BETWEEN SOLIDS	17
2.1 Radiation Emitted by an Ideal Radiator	17
2.2 Absorption, Reflection, and Transmission of Arriving Radiation	17
2.3 Kirchhoff's Law; the Black Body	19
2.4 Black-Body Radiation	20
2.5 Radiation Characteristics of Real Surfaces	22
2.6 Intensity of Radiation	24
2.7 Radiation Interchange Between Black Surfaces	26
2.8 Radiation Interchange Between Gray Surfaces	28
3. CONVECTION HEAT TRANSFER	31
3.1 Fluid Motion	31
3.2 The Boundary Layer	31
3.3 Definition of the Film Coefficient	33
3.4 Convection Heat Transfer	33
3.5 Dimensional Analysis	35
3.6 Forced Convection in Conduits	37

3.7	Equations for Turbulent and Laminar Flow in Circular Conduits	39
3.8	Natural Convection	40
4.	METHODS FOR CHANGING THERMAL CONDUCTANCE	46
4.1	Introduction	46
4.2	Parameters for Rating Heat Transfer Fluids	48
4.3	Extended Surface Elements: Fins	51
4.4	Determining Thermal Contact Resistance	54
4.5	Fundamental Relations of Heat Exchangers and Cold Plates	57
5.	TEMPERATURE CONTROL: METHODS, ANALYSIS, SYSTEMS	71
5.1	Introduction	71
5.2	Definitions	71
5.3	Basic Methods of Temperature Control	72
5.4	Basic Relations for Thermal Design for Time-Variable Temperature-Control Systems	78
5.5	Commanding Components of Control Systems; ON-OFF and Proportional Control	80
5.6	Arranging the Elements of a Temperature Control System	82
5.7	Thermal Analogues	84
5.8	Thévenin's Theorem	87
5.9	Temperature Control Systems	90
5.10	Introduction to Linear-System Mathematics	93
5.11	Introduction to Nonlinear-System Mathematics	98
5.12	Example Illustrating the Performance of a Controlled Mass	102
6.	ELECTRICAL RESISTANCE ELEMENTS	108
6.1	Introduction	108
6.2	The Wheatstone Bridge	109
6.3	The Basic Wheatstone Bridge Equations	110
6.4	Errors Caused by Lead Wire Resistance	112
6.5	Three-Wire Connections	113
6.6	Conductive Resistance Elements	114
6.7	Resistance-Temperature Characteristic of Conductors	115
6.8	Effects of Alloys and Impurities	118
6.9	Effects of Mechanical Strain	119
6.10	Semiconductive Resistance Elements	120
6.11	Resistance-Temperature Characteristic for Thermistors	122
6.12	Thermistor Self-Heating	122
6.13	Some Relative Merits of Conductive and Semiconductive Resistance Elements	124

7. ELECTRONIC TEMPERATURE CONTROL EQUIPMENT	127
7.1 Introduction	127
7.2 The Silicon Controlled Rectifier	128
7.3 The Unijunction Transistor	130
7.4 The Magnetic Amplifier	133
7.5 Electrical Resistance Heaters	136
7.6 Blowers and Fans	138
8. MECHANICAL THERMOSTATS	143
8.1 Introduction	143
8.2 Bimetallic Elements	144
8.3 Bending of Bimetallic Elements	145
8.4 Bending of Multicomponent Elements	152
8.5 Snap-Action Element Operation	152
8.6 Deflections in Bimetallic Element Buckling	157
8.7 Snap-Action Element Temperature Differential	158
8.8 Bimetallic Element Construction	159
8.9 Applications of Bimetallic Elements	160
8.10 Comparison of Creep and Snap-Action Thermostats	162
8.11 Self-Heating of Bimetallic Elements	164
8.12 Mercury-in-Glass Thermostats	164
9. THERMOELECTRIC DEVICES	168
9.1 Introduction	168
9.2 Basic Steady-State Equations and Performance of Thermoelectric Refrigerators	170
9.3 Cooling Capabilities of Thermoelectric Couples	175
9.4 Construction of Thermoelectric Cooling Modules	177
9.5 Thermoelectric Modules in Cascade	179
9.6 Temperature Control with and Dynamic Response of Thermoelectric Modules	181
9.7 Thermocouples for Measurement and Control of Temperature	184
10. CONTROL OF SPACECRAFT TEMPERATURES	187
10.1 Introduction	187
10.2 Terms in the Energy Balance Equation	188
10.3 Parameters of the Energy Balance Equation	193
10.4 Solution to the Energy Balance Equation	194
10.5 Methods of Spacecraft Temperature Control	196
10.6 Passive Control	197
10.7 Stability of Coatings in Space	198
10.8 Active Control of Effective Emissivity/Absorptivity	199
10.9 Active Control with Phase-Change Materials	202
Index	209
