Preface	v
-------------------	---

PART ONE – INTRODUCTION

Chapter 1. Fundamentals of Thermodynamics and Aerodynamics

[1-1] Introduction	3
[1-2] Equation of State	3
[1-2.1] Equation of State of Real Gases	4
[1-3] First Law of Thermodynamics	5
[1-3.1] Specific Heats	6
[1-3.2] Internal Energy	6
[1-3.3] Relationship Between Specific Heats c_p and c_v	7
[1-3.4] Enthalpy	7
[1-3.5] Entropy	8
[1-3.5.1] Reversible Process	9
[1-3.5.2] Adiabatic Process	9
[1-3.5.3] Isentropic Process	9
[1-3.5.4] Polytropic Process	10
[1-3.5.4.1] Work Done	10
[1-3.5.4.1.1] Special Case for Isentropic Case where $n = k$	11
[1-3.5.4.1.2] Heat Added	11
[1-3.6] Mixture of Gases	12
[1-3.7] Entropy-Enthalpy Diagram	14
[1-3.7.1] Remarks on Entropy-Enthalpy Diagram	17
[1-3.8] The Ideal (Reversible) Cycles	17
[1-3.9] Cycle Work, Cycle Heat Added, and Cycle Efficiency	17
[1-4] Steady Flow Energy Equation	18
[1-4.1] Stagnation Enthalpy or Total Enthalpy, H	19
[1-4.2] Application of Steady Flow Energy Equation to Compressor and Turbine Analysis	20
[1-5] One-Dimensional Steady Flow Analysis	20
[1-5.1] One-Dimensional Energy Equation	20
[1-5.2] One-Dimensional Continuity Equation	21

[1-5.3] One-Dimensional Momentum Equation without Fluid Shearing or Friction Losses	21
[1-5.3.1] One-Dimensional Momentum Equation with Fluid Shearing or Friction Losses	22
[1-5.4] Speed of Sound	22
[1-5.5] Mach Number	23
[1-5.6] Another Form of Energy Equation	23
[1-5.7] Isentropic Flow Equations	24
[1-6] Normal Shock Waves and Rayleigh and Fanno Lines	29
[1-7] Oblique Shock Waves	33
[1-8] One-Dimensional Convergent - Divergent Nozzle Flow	38
[1-8.1] Nozzle Efficiency	46
[1-8.2] Nozzle Thrust	47
[1-9] Supersonic Inlet	47
[1-9.1] Constant Geometry Supersonic Inlet	49
[1-9.2] Variable-Geometry Supersonic Inlet	50
[1-9.3] Inlet Diffuser Efficiency	50
[1-10] One-Dimensional Flow Analysis with Area Change, Friction and Heat Addition	52
[1-10.1] One-Dimensional Flow Analysis with Area Change, Friction and Heat Addition (Additional Analysis)	58
[1-10.2] Mixing of Two Flows in a Non-Constant Area Duct	67
[1-11] Thermodynamic Cycle Analysis	75
[1-11.1] Ram Compression and Ram Pressure Recovery	75
[1-11.2] Compressor Compression and Compressor Work	77
[1-11.3] Combustion and Burner Efficiency	80
[1-11.3.1] Combustion	80
[1-11.4] Turbine Expansion and Turbine Work	83
[1-11.5] Nozzle Expansion and Nozzle Efficiency	86
[1-12] Variations of Basic Gas Turbine or Jet Engine Cycles	89
[1-12.1] Intercooling	89
[1-12.2] Reheat	94
[1-12.3] Regeneration	97
[1-12.4] After-burning	98
[1-12.5] Water Injection	99
[1-12.6] Pressure Loss in Various Components	102
[1-13.1] Output, Input and Thermal Efficiency	103
[1-13.2] Jet Thrust	103
[1-13.3] Propeller Thrust	104
[1-13.4] Specific Fuel Consumption	105
[1-14] Variations of Gas Turbine Cycle and Turbojet Cycle by Gas Table Method	105
[1-14.1] Gas Table	105
[1-14.2] Example 1: Gas Turbine Analysis	107
[1-14.3] Example 2: Turbojet Analysis	112

PART TWO – JET PROPULSION**Chapter 2. Thermodynamic Cycle Analysis of Gas Turbines and Air-breathing Propulsion Systems**

[2-1] Introduction	119
[2-2] Symbols and Sketches of Air-breathing Propulsion Systems	119
[2-3] Gas Turbine Cycles	121
[2-4] Air-breathing Propulsion Systems: Turbojet, Turboprop, Ducted Fan, Ram Jet and Ducted Rocket	133
[2-4.1] Turbojet Cycles	147
[2-4.2] Turboprop Cycles	150
[2-4.3] Ducted Fan Cycles	153
[2-4.4] Off-Design Point Engines	160
[2-4.4.1] Compression Rate Variation with Altitude and Air Speed (Variation with Compressor Inlet Temperature) at Constant Compressor Speed	161
[2-4.4.2] Air Flow Variation with Altitude and Airplane Speed at Constant Compressor Speed	162
[2-5] Rotary Matrix Regenerator for Turboprop Applications	165
[2-5.1] Discussion	165
[2-5.2] Operating Principles	168
[2-5.3] Theory and Design	172
[2-6] Analytical Solutions for Rotary Matrix, Wire Screen Heat Exchangers	173
[2-7] Pulse Jet	191
[2-7.1] Discharging from Point <i>c</i> to Point <i>a</i>	192
[2-7.1.1] Supercritical Discharging When $(P/p \geq [(k+1)/2]^{k/(k-1)}$	193
[2-7.1.2] Subcritical Discharging When $(P/p \geq [(k+1)/2]^{k/(k-1)}$	195
[2-7.2] Combustion from Point <i>b</i> to Point <i>c</i>	197
[2-7.3] Charging Process from Point <i>a</i> to Point <i>b</i>	200
[2-7.3.1] Supercritical Charging and Subcritical Discharg- ing	202
[2-7.3.2] Subcritical Charging and Subcritical Discharging .	204
[2-7.3.3] Subcritical Charging and Supercritical Discharg- ing	204

Chapter 3. Aerodynamic Design of Axial Flow Compressors and Turbines

[3-1] Introduction	207
[3-2] Compressible Flow Analysis	208
[3-2.1] Radial Equilibrium	211
[3-2.2] Continuity Equation	214
[3-2.3] Density Relationship	214
[3-2.4] Method of Calculation	215

[3-3] Turbine Analysis	218
[3-4] Appendix: Two Dimensional Incompressible Compressor Design	224
[3-4.1] Turning Angle θ as $f(C_L)$ and Derivation of Blade Efficiency η_b	232

Chapter 4. Ramjets and Air-Augmented Rockets

[4-1] Preliminary Performance Calculations	237
[4-2] Diffuser Design	242
[4-2.1] Inviscid Design of External-Compression Diffusers	244
[4-2.2] Off-Design Operation, Boundary Layer Problems, and Instabilities	248
[4-2.3] Hypersonic Inlets	251
[4-3] Combustor and Nozzle Design	254
[4-4] Considerations for Preliminary Design of Ramjet Vehicles	257
[4-5] Air-Augmented Rockets	264
[4-6] Engines with Supersonic Combustion	265
[4-7] Concluding Remarks	268
[4-8] Acknowledgments	268
[4-9] Nomenclature	269

PART THREE – ROCKET PROPULSION**Chapter 5. Rocket Classifications, Liquid Propellant Rockets, Engine Selection, and Heat Transfer**

[5-1] Definitions and Classification of Rocket Propulsion Engines.	277
[5-2] Liquid Propellant Rockets	283
[5-3] Selection Criteria	293
[5-4] Heat Transfer (based largely on Reference 7)	296
[5-4.1] Radiation Cooling	296
[5-4.2] Heat-Sink Cooling	301
[5-4.3] Low Flame Temperature Metal Chamber	301
[5-4.4] Turbine Exhaust Gas Cooling	301
[5-4.5] Insulation Cooling	302
[5-4.6] Dump Cooling	302
[5-4.7] Ablative Cooling	303
[5-4.8] Regenerative Cooling	304
[5-4.9] Film Cooling	304
[5-4.10] Transpiration Cooling	305
[5-4.11] Combined Methods	305

Chapter 6. Solid Propellant Rockets

[6-1] Composition of a Solid Propellant	308
---	-----

[6-2] Processability Criteria	312
[6-3] Performance of Typical Propellants	312
[6-4] Burning Rate – Pressure Relationships	314
[6-5] Propellant Area Ratio	316
[6-6] Temperature Sensitivity of Burning Equations	317
[6-7] Erosive Burning	318
[6-8] Effect of Spin on Burning Rate	318
[6-9] Mechanism of Homogeneous Propellant Burning	318
[6-10] Mechanism of Composite Propellant Burning	320
[6-11] Correlation of Burning Rates with Oxidizer Activation Energy	321
[6-12] Effect of Composition on Burning Rate	321
[6-13] Catalysts	323
[6-14] Mechanical Properties	323
[6-14.1] Uniaxial Tensile Test	323
[6-14.2] Uniaxial Shear Test	326
[6-14.3] Bulk Dilution Test	326
[6-14.4] Poisson's Ratio	326
[6-14.5] Glass Transition	327
[6-15] Nomenclature	329

Chapter 7. Hybrid Rocket Theory and Design

[7-1] Introduction	332
[7-2] Hybrid Combustion with Negligible Radiation	334
[7-2.1] The Physical Process	334
[7-2.2] Convective Heat Transfer	335
[7-2.3] The Role of Nonvolatile Particles	338
[7-3] Operating Characteristics of Hybrid Rockets with Negligible Radiation	340
[7-3.1] Regression Rate Insensitivity to Thermochemical Parameters	340
[7-3.2] Regression Rate Dependence Upon Grain Configuration	340
[7-3.3] Throttling and Off-Design Point Operation	340
[7-3.4] Combustion Efficiency	341
[7-3.5] Regression Rate Dependence Upon Pressure	342
[7-4] Hybrid Combustion in Radiative Motors	342
[7-4.1] Regression Rate Dependence Upon Radiant Energy Flux	342
[7-4.2] Evaluation of Convective Heat Transfer Q_c	344
[7-4.3] Evaluation of Radiative Heat Transfer Q_r	345
[7-5] Transient Operation of Hybrid Rockets	346
[7-5.1] Penetration of Temperature Profile	346
[7-5.2] Critical Regression Rate	348

[7-6] Design of Hybrid Rockets	349
[7-6.1] Specification of Mission	349
[7-6.2] Preliminary Design Procedure	350
[7-6.3] Example Configurations	351

PART FOUR – NUCLEAR PROPULSION

Chapter 8. Nuclear Rocket Propulsion

[8-1] Nuclear Rocket Engine Design and Performance	359
[8-1.1] Types of Nuclear Rockets	359
[8-1.2] Overall Engine Design	359
[8-1.3] Nuclear Rocket Performance	361
[8-2] Component Design	362
[8-2.1] Nuclear Rocket Reactors	362
[8-2.1.1] General Design Considerations	362
[8-2.1.2] Reactor Core Materials	364
[8-2.1.3] Thermal Design	365
[8-2.1.4] Mechanical Design	365
[8-2.1.5] Nuclear Design	367
[8-2.1.6] Shielding	369
[8-2.2] Nuclear Rocket Nozzles	370
[8-2.2.1] General Design Considerations	370
[8-2.2.2] Heat-Transfer Analysis	371
[8-2.2.2.1] Over-all Problem	371
[8-2.2.2.2] Hot-Gas Boundary	371
[8-2.2.2.3] Cold-Gas Boundary	373
[8-2.3] Propellant Feed Systems	375
[8-2.3.1] General Design Considerations	375
[8-2.3.2] Turbopump Power Cycle	375
[8-2.3.3] Turbopump	376
[8-2.3.3.1] Pumps	376
[8-2.3.3.2] Turbines	381
[8-2.3.3.3] Power Transmission	381
[8-2.3.3.4] Critical Speeds	382
[8-2.3.4] Valves	382
[8-2.4] Nuclear Rocket Engine Control	383
[8-2.4.1] General Design Considerations	383
[8-2.4.2] Power Level Control	384
[8-2.4.3] Chamber-Pressure Control	386
[8-2.5] Thrust-Vector-Control Systems	387
[8-2.5.1] General Design Considerations	387
[8-2.5.2] Types of Systems	387
[8-2.5.2.1] Auxiliary Thrusters	388
[8-2.5.2.2] Jet-Deflection Systems	389

[8-2.5.2.2.1] Fluid-Injection Systems	389
[8-2.5.2.2.2] Jet elevators and Jet Vanes	390
[8-2.5.2.3] Gimbal Systems	390

Chapter 9. Radioisotope Propulsion

[9-1] Alternative Approaches	395
[9-1.1] Direct Recoil Method	395
[9-1.2] Thermal Heating Method	397
[9-2] Basic Thruster Configurations	398
[9-3] Propulsion System and Upper Stage	400
[9-4] Relative Mission Capabilities	402
[9-4.1] Primary Propulsion	402
[9-4.2] Auxiliary Propulsion	404
[9-5] Thruster Technology	405
[9-5.1] Design Criteria	405
[9-5.1.1] Performance	405
[9-5.1.2] Safety	406
[9-5.1.3] Design Criteria Summary	409
[9-5.2] Heat Source Development	409
[9-5.2.1] Radioisotope Fuel	409
[9-5.2.2] Capsule Technology	410
[9-5.2.2.1] General Considerations	410
[9-5.2.3] Thermal Design	412
[9-5.2.4] Fabrication and Non-Destructive Testing Techniques	414
[9-5.2.5] Pressure Containment	414
[9-5.2.6] Impact	415
[9-5.2.7] Heat Source Simulation	418
[9-5.2.8] Oxidation and Corrosion of Encapsulating Materials	418
[9-5.3] Nozzle Performance	419
[9-6] Summary	422

PART FIVE – ELECTRIC AND ION PROPULSION**Chapter 10. Electric and Ion Propulsion**

[10-1] Basic Concepts	427
[10-1.1] Energy Sources	427
[10-1.2] The Separately Powered Rocket	429
[10-1.3] Effects of Variable Mass	432
[10-1.4] Power Requirements and Rocket Efficiency	434
[10-1.5] Effects of Gravitational Fields	435

[10-2] Thrust Devices	436
[10-2.1] Thermal Thrusters	437
[10-2.1.1] The Resistojet	437
[10-2.1.2] Arc Jets	439
[10-2.1.3] Ablative Thrusters	439
[10-2.2] Electrostatic Thrusters	440
[10-2.2.1] Ion Engines	441
[10-2.2.1.1] High Pressure Arcs (Duoplasmatron) .	441
[10-2.2.1.2] Contact Thrusters	442
[10-2.2.1.3] The Bombardment Thruster	447
[10-2.2.2] Colloid Thrusters	449
[10-2.3] Plasma Thrusters	452
[10-2.3.1] $j \times B$ Machines	453
[10-2.3.2] MPD Arcs	454
[10-2.3.3] Pulsed Inductive Accelerators	455
[10-3] State of the Art and Future Trends	456
[10-3.1] Sample Problem 1	457
[10-3.2] Sample Problem 2	460
[10-3.3] Sample Problem 3	462

Chapter 11. Ion Propulsion

[11-1] Introduction	463
[11-2] Fundamentals	464
[11-2.1] Performance Analysis	465
[11-2.1.1] Characteristic Velocity	465
[11-2.1.2] Payload	467
[11-2.1.3] Specific Power	468
[11-2.2] Electrical Thrust Devices	470
[11-2.2.1] Ion and Colloid	470
[11-3] Ion Rocket Engine	471
[11-3.1] Ion Sources	475
[11-3.2] Electromagnetic Fields	480
[11-3.3] Charged Colloid Sources	481

PART SIX – THEORY ON COMBUSTION, DETONATION AND FLUID INJECTION

Chapter 12. Interaction Flows Due to Supersonic Secondary Jets

[12-1] Introduction	487
[12-2] Jets Directed Upstream	488
[12-3] Transverse Jets	496
[12-4] Summary	502

Chapter 13. Gasdynamics of Explosions

[13-1] Theoretical Aspects	508
[13-1.1] Fundamentals of Non-steady Gasdynamics	508
[13-1.1.1] Continuity Equation	509
[13-1.1.2] Equation of Motion	510
[13-1.1.3] Entropy Equation	510
[13-1.1.4] Characteristic Relations	512
[13-1.2] Gasdynamic Discontinuity	515
[13-1.2.1] Mechanical Conditions	515
[13-1.2.2] The Hugoniot Relationship	516
[13-1.2.3] Oblique Discontinuity	521
[13-1.3] Simple Wave	523
[13-1.3.1] Simple Wave in Non-Steady Flow	523
[13-1.3.2] Simple Wave in Steady Flow	524
[13-2] Analytical Aspects	527
[13-2.1] Vector Polar Method	527
[13-2.1.1] Wave Interactions	529
[13-2.1.2] Wave Intersections	542
[13-3] Appendix: Salient Properties of the Hugoniot Curve	555

Chapter 14. Supersonic Combustion Technology

[14-1] Introduction	561
[14-2] Performance of Supersonic Combustion Ramjet	562
[14-2.1] Possible Air-breathing Engine Schemes	562
[14-3] Supersonic Combustion	564
[14-3.1] Qualitative Description of Supersonic Combustion Controlled by Mixing	564
[14-3.1.1] Supersonic Combustion Controlled by Diffusion	564
[14-3.1.2] Supersonic Combustion Controlled by Heat Convection	570
[14-3.2] Analysis of the Reaction Process	574
[14-3.2.1] Determination of Reaction Times	575
[14-3.2.2] Numerical Results	578
[14-3.2.3] Discussion of Results	581
[14-3.2.4] Tangential Injection with Chemical Reaction	582
[14-3.3] Analysis of Mixing Processes	583
[14-3.3.1] Mixing of Non-Reacting Flows	584
[14-3.3.2] Discussion of Experimental Results of Non-Reacting Gases	586
[14-3.3.3] Mixing with Pressure Gradients	587

Chapter 15. Combustion Instability Theory

[15-1] Introduction	599
[15-1.1] Unstable Combustion	599

[15-2] Review of Theoretical Developments	601
[15-2.1] Early Developments and the Time Lag Concept	601
[15-2.2] Current Status in Liquid Propellant Rockets	602
[15-2.3] Current Status in Solid Propellant Rockets	603
[15-3] Formulation and Analysis	605
[15-3.1] Low Frequency, Capacitive Type Stability	605
[15-3.2] High Frequency, Wave Type Instability	608
[15-3.3] The Energy Approach	610
[15-3.4] Non-linear Effects	612
[15-3.5] Nozzle Outflow	613
[15-4] Concluding Remarks	614

PART SEVEN – ADVANCED CONCEPTS AND MISSION APPLICATIONS

Chapter 16. An Advanced Space Propulsion Concept

[16-1] Introduction	621
[16-1.1] General Consideration for Propulsion in Space	621
[16-1.2] Power Supply	622
[16-1.3] Propellant Storage and Handling Facilities	624
[16-1.4] Electrostatic and Electromagnetic Thrusters	625
[16-1.5] Advanced Electric Propulsion Systems for Space Vehicles	627
[16-2] Sputtering, A Thrust Generation Mechanism	628
[16-2.1] Sputtering Phenomena	628
[16-2.2] Possible Performance of Sputtering Thrusters	632
[16-2.3] Energy Efficiency of the Sputtering Process	633
[16-3] Analyses of an Elementary Mission with Different Electric Thrusters	635
[16-3.1] General Consideration	635
[16-3.2] Performance Formula for Electric Thrusters	637
[16-3.3] Optimization with Electric Thrusters	639
[16-4] Summary and Concluding Remarks	642

Chapter 17. Zero g Propulsion Problems

[17-1] Introduction	644
[17-2] Basic Definitions	645
[17-2.1] Zero Gravity	647
[17-2.2] Engineering Considerations of Zero-g Environment	649
[17-2.3] Principle of Minimum Energy	651
[17-3] Hydrostatics	651
[17-3.1] The Variational Problem	651
[17-3.2] Solutions for the Variational Problem	655
[17-3.3] Conclusions from Hydrostatic Analysis	658

[17-4] Static Configurations in Zero g	658
[17-5] Hydrodynamics	661
[17-5.1] Propellant Slosh at Zero g	662
[17-5.2] Propellant-Position Control	667
[17-5.3] Capillary Stability	673
[17-6] Dimensional Analysis, Modeling, and Test	677
[17-6.1] Gas Interface Velocity	677
[17-6.2] Propellant Accumulation	684
[17-6.3] Gas Ingestion	691
[17-6.4] Analytical Considerations of Gas Ingestion	695
[17-7] Capillary Barriers	697
[17-7.1] Static Stability	699
[17-7.2] Dynamic Stability	701
[17-8] Zero g Propellant Gauging	712
[17-9] Summary and Conclusions	714
[17-10] Appendix A. Derivation of Slosh Frequency	717
[17-11] Appendix B. Derivation of Flow Rate during Propellant Settling	721

Chapter 18. Propulsion Systems—Comparison and Evaluation for Space Missions

[18-1] Goals	728
[18-2] Propulsion-Vehicle-Mission Integration	728
[18-3] Elements of Integrated Transportation System Comparison (ELV, GISV, CISV and HISCV)	749
