

CONTENTS OF VOLUME 1, PART I

<i>Contributors to Volume 1, Part I</i>	vi
<i>Contributors to Volume 1, Part II</i>	vii
<i>Foreword</i>	ix
<i>Introduction to the Series</i>	xi

1. ACRYLIC ESTER EMULSIONS AND WATER-SOLUBLE RESINS 1

Gerould Allyn

1-1. Introduction	1
1-2. Acrylic Emulsion Polymerization	2
1-3. Film-Forming Characteristics of Emulsion Polymers	5
1-4. Properties of Commercial Thermoplastic Acrylic Emulsion Polymers	9
1-5. Manufacture of Acrylic Emulsion Paints	12
1-6. Applications for Thermoplastic Acrylic Emulsion Polymers	16
1-7. Thermosetting Acrylic Emulsion Polymers	27
1-8. Water-Soluble Acrylic Polymers	30
References	34

2. ACRYLIC ESTER RESINS 35

Gerould Allyn

2-1. Introduction	35
2-2. Chemistry of the Monomeric Acrylic and Methacrylic Esters	36
2-3. Polymerization of the Acrylic Monomers	38
2-4. General Properties of Acrylic Ester Polymers	40
2-5. Properties of Commercial Thermoplastic Acrylic Ester Resins	44
2-6. Applications for the Thermoplastic Acrylic Resins	49
2-7. Methacrylation of Oils and Resins	56
2-8. Thermosetting Acrylic Ester Resins	56
2-9. Properties of Commercial Thermosetting Acrylic Copolymers	63
2-10. Applications for Thermosetting Acrylic Copolymers	68
References	68

3. ALKYD RESINS 71

W. M. Kraft, E. G. Janusz, and D. J. Sughrue

3-1. Introduction	71
3-2. Alkyd Formulation	74
3-3. Alcoholysis	77
3-4. Esterification Processes	83
3-5. Fatty Acid Modification	83
3-6. Chain Modification	84
3-7. Resin Modifications without Substitution	87
3-8. Chemical Modification	88
3-9. Test Methods and Laboratory Evaluation Procedures	91
3-10. Applications and Uses	95
3-11. Future Trends	97
References	97

4. ASPHALT AND ASPHALT COATINGS 99

Stephen H. Alexander

4-1. Composition and Properties of Asphalt	102
4-2. Processing to Produce Asphalt	104
4-3. Asphalt Coatings	107
4-4. Manufacture of Asphalt Coatings	124
4-5. Conclusion	126
References	126

5. CHLORINATED RUBBER 129

H. E. Parker

5-1. Introduction	130
5-2. Historical	131
5-3. Commercial Development	132
5-4. Production Methods	133
5-5. Molecular Structure	133
5-6. Properties	135
5-7. Viscosity Blending	137
5-8. Stabilization of Chlorinated Rubber	138
5-9. Solvents for Chlorinated Rubber	140
5-10. Solvent Mixtures	142
5-11. Effect of Solvent on Viscosity	144
5-12. Variation of Viscosity with Shear Rate	145
5-13. Solvent Combinations	146
5-14. Storage of Chlorinated Rubber Solutions	147
5-15. Plasticizers	147

5-16. Water-Vapor Permeability	150
5-17. Resins	150
5-18. Pigments	154
5-19. Application of Chlorinated Rubber Paints	158
5-20. Paint Formulations	161
5-21. Paint Systems	161
5-22. Primers	162
5-23. Chemical Resistance of Chlorinated Rubber Paint	165
5-24. Chemical-Resistant Finishes	165
5-25. Thixotropic or High-Build Paints	167
5-26. Chlorinated Rubber and Alkyd Paints	172
5-27. Formulation of Chlorinated Rubber with Alkyds	175
5-28. Chlorinated Rubber-Acrylic Paints	176
5-29. Chlorinated Rubber Emulsion Paints	178
5-30. Trichloroethylene-Based Chlorinated Rubber Paints	179
5-31. Cold-Dipping Paints	180
5-32. Hot-Dip Process	181
5-33. Trichloroethylene Spray Paints	181
5-34. Marine Paints	182
5-35. Masonry Paints	185
5-36. Swimming Pool Paints	189
5-37. Traffic Paints	191
5-38. Nonflammable and Fire-Retardant Paints	193
5-39. Wood Finishes	197
5-40. Mold-Resistant Paints	199
5-41. Chlorinated Rubber-Neoprene Blends	199
5-42. Chlorinated Rubber-Mastic Compositions	202
5-43. Chlorinated Rubber-Pitch Primers	203
5-44. The Initial-Bond Test	204
5-45. Chlorinated Rubber in Paper Coatings	205
5-46. Chlorinated Polyisoprene	207
5-47. Chlorinated Polypropylene	208
5-48. Chlorinated Polyethylene	208

6. DRIERS 211

William J. Stewart

6-1. Introduction	211
6-2. Mechanism of Drying	213
6-3. Drier Metals	214
6-4. Drier Anions	217
6-5. Organic Driers	219
6-6. Loss of Dry	219
6-7. Driers for Aqueous Oil Systems	220
6-8. Drier Formulation	221
6-9. Methods of Manufacture	221
References	223

7. EPOXY RESIN COATINGS	225
<i>George R. Somerville</i>	
7-1. Introduction	225
7-2. General	226
References	262
8. HYDROCARBON RESINS AND POLYMERS	265
<i>D. F. Koenecke</i>	
8-1. Introduction	265
8-2. Nonconverting Resins	269
8-3. Preparation and Properties	275
8-4. Uses	279
8-5. Oleoresinous Vehicles	279
8-6. Non-Varnish Coatings	288
8-7. High-Molecular-Weight Hydrocarbon Uses	291
8-8. Conversion Hydrocarbons	292
8-9. General Film Properties	298
8-10. Conclusion	306
References	306
9. HYDROCARBON SOLVENTS	309
<i>W. W. Reynolds</i>	
9-1. Paraffins	310
9-2. Naphthenes	313
9-3. Aromatics	314
9-4. Petroleum Solvents	316
References	339
10. NATURAL RESINS	341
<i>Charles L. Mantell</i>	
10-1. Introduction	341
10-2. Accroides	350
10-3. Batu	350
10-4. Black East India	352
10-5. Boea	352
10-6. Congo Copal	353

10-7. Damars	359
10-8. Damar Wax	362
10-9. Elemi	362
10-10. Kauri	364
10-11. Manilas	365
10-12. Mastic	374
10-13. Pale East India	374
10-14. Pontianak	375
10-15. Sandarac	375
10-16. Resin Solubility	377
10-17. Thermal Processing or Running of Natural Resins	377
References	390
Bibliography	390

11. POLYETHERS AND POLYESTERS 391

A. C. Filson

11-1. Introduction	392
11-2. Gel Coating	393
11-3. Condensation Reactions	394
11-4. Saturated Polyesters	397
11-5. Unsaturated Polyesters	398
11-6. Polyethers	405
11-7. Application Methods	407
11-8. Ancillary Materials in Coating Formulations	410
11-9. Catalysts	412
11-10. Waxes	418
11-11. Pigmentation	418
11-12. Mixed Catalyst Systems	419
11-13. Thixotropic Additives	419
11-14. Vinyl Polymerization and Copolymerization	419
11-15. Conclusion	431
References	432
Bibliography	434

12. URETHANE COATINGS 435

A. Damusis and K. C. Frisch

12-1. Introduction	435
12-2. Raw Materials for Urethane Coatings	437
12-3. Chemistry of Urethane Coatings	456
12-4. Types of Urethane Coatings	473
12-5. Applications of Urethane Coatings	493
References	512

13. VEHICLE MANUFACTURING EQUIPMENT 517*A. F. Steioff*

13-1. Introduction	517
13-2. The Reactor	518
13-3. Auxiliaries	522
13-4. Heat-Transfer Methods	527
13-5. Controls	538
13-6. Vehicle Reactor Systems	539
