

# Contents

## SECTION I: BASIC CONCEPTS OF TEMPERATURE

1. The Temperature Concept for Systems in Equilibrium, *R. B. Lindsay* 3
2. Thermodynamics and Statistical Mechanics at Negative Absolute Temperatures, *Norman F. Ramsey* 15
3. Spin Temperature and Chemical Potentials, *Ralph J. Harrison* 21
4. Relaxation of Nonequilibrium Distributions, *Kurt E. Shuler* 27
5. The Role of Temperature in Our Measuring System, *A. G. McNish* 35

## SECTION II: BASIC SCALES OF THERMOMETRY

6. The Thermodynamic Temperature Scale, Its Definition and Realization, *C. M. Herzfeld* 41
7. The Thermodynamic Scale of Temperature below 1°K, *R. P. Hudson* 51
8. The Text Revision of the International Temperature Scale of 1948, *H. F. Stimson* 59
9. The 1958 He<sup>4</sup> Temperature Scale, *J. R. Clement* 67
10. Problems in Establishment of a He<sup>3</sup> Scale of Temperature, *T. R. Roberts, S. G. Sydorik, and R. H. Sherman* 75

## SECTION III: ESTABLISHMENT OF THE THERMODYNAMIC SCALE

11. The Pennsylvania State University Thermodynamic Temperature Scale below 90°K and the Normal Boiling Points of Oxygen and Normal Hydrogen on the Thermodynamic Scale, *G. W. Moessen, J. G. Aston and R. G. Asch* 90
12. Helium Gas Thermometry at Low Temperatures, *C. R. Barber* 103
13. The I.M.P.R. Temperature Scale for the 10 to 90°K Region, *A. C. Borovick-Romanov, P. G. Strelkov, M. P. Orlova, and D. N. Astrov* 113
14. The Determination of Absolute Temperatures from Sound Velocity Measurements, *G. Cataland, M. Edlow, and H. H. Plumb* 129
15. Measurement of Temperature below 1°K, *J. G. Daunt and D. O. Edwards* 133
16. A Low-Temperature Thermometer Utilizing the Mössbauer Effect, *R. Dean Taylor* 139
17. Measurements of Thermodynamic Temperatures by a Gas Thermometer, *I. I. Kirenkov, A. N. Gordov, K. S. Israilov, and U. V. Diykov* 147
18. A National Bureau of Standards Gas Thermometer, *L. A. Guildner* 151

## SECTION IV: THERMOMETRIC FIXED POINTS

19. The Replacement of Fixed Points on a Temperature Scale, *H. Preston-Thomas* 159
20. A Review of Recent Determinations of Thermodynamic Temperatures of Fixed Points above 419°C, *Helmut Moser* 167
21. Selected Values for the Thermodynamic Temperatures of Thermometric Fixed Points below 0°C, *H. van Dijk* 173
22. Temperatures of Phase Transitions in Solid Oxygen, *M. P. Orlova* 179
23. The Freezing Points of High Purity Metals as Precision Temperature Standards, *E. H. McLaren* 185

## SECTION V: LIQUID-IN-GLASS AND THERMOELECTRIC THERMOMETRY

24. Recent Developments in Liquid-in-Glass Thermometry, *Robert D. Thompson* 201
25. Thermometric Cells for Calibration of Liquid-in-Glass Thermometers, *Delmo P. Enagonio, Erwin G. Pearson, and Charles Proffer Saylor* 219
26. Some Experiments in Mercury Thermometry, *J. A. Hall and Vera M. Leaver* 231
27. An Exploration of the Thermoelectric Properties of Certain Cobalt-Base Alloys, *H. J. Wagner and J. C. Stewart* 245

SECTION VI: PLATINUM RESISTANCE THERMOMETRY ABOVE  $-183^{\circ}\text{C}$ 

28. The History of Pt 27, *Edward Wichers* 259
29. Laboratory Control of Production of Platinum for Thermometry, *W. Betteridge, D. W. Rhys, and D. F. Withers* 263
30. Potentiometric Methods of Resistance Measurement, *T. M. Dauphinee* 269
31. An Improved Resistance Thermometer Bridge, *J. P. Evans* 285
32. Calibration Techniques for Precision Platinum Resistance Thermometers, *Donald Robertson and Kasper A. Walch* 291
33. The Stability of Platinum Resistance Thermometers at Temperatures up to  $630^{\circ}\text{C}$ , *R. J. Berry* 301
34. A Study of Stability of High Temperature Platinum Resistance Thermometers, *J. P. Evans and G. W. Burns* 313
35. Anomalous Electrical Resistance Effects in Small Diameter Platinum and Platinum-Rhodium Resistance Elements at Temperatures in Excess of  $1000^{\circ}\text{C}$  in a Gaseous Environment, *Derek Bradley and A. G. Entwistle* 319

SECTION VII: PLATINUM RESISTANCE THERMOMETER SCALE,  $10^{\circ}$  to  $90^{\circ}\text{K}$ 

36. Interpolation of Platinum Resistance Thermometers,  $10^{\circ}$  to  $273.15^{\circ}\text{K}$ , *Robert J. Corruccini* 329
37. The Extension of the International Practical Temperature Scale Below  $90^{\circ}\text{K}$ , *A. F. A. Harper, W. R. G. Kemp, and G. C. Lowenthal* 339
38. Low-Temperature Scales 10 to  $90^{\circ}\text{K}$ , *C. R. Barber* 345
39. On Methods of Establishment of a Practical Scale in the Range  $10^{\circ}$  to  $90^{\circ}\text{K}$ , *D. I. Sharevskaya, P. G. Strelkov, A. S. Borovik-Romanov, D. N. Astrov, and M. P. Orlova* 351
40. On the Use of Platinum Thermometers for Thermometry below  $90^{\circ}\text{K}$ . A Study of Two Possibilities for Relating Resistance Data for Platinum Thermometers to Each Other, *H. van Dijk* 365

## SECTION VIII: PRACTICAL LOW-TEMPERATURE THERMOMETRY

41. Some Remarks on Magnetic Thermometry between  $1.5^{\circ}$  and  $23^{\circ}\text{K}$  and on the Vapor Pressure-Temperature Relation of Liquid Hydrogen, *M. Durieux, H. van Dijk, H. ter Harmsel, and C. van Rijn* 383
42. Germanium Resistance Thermometers, *J. E. Kunzler, T. H. Geballe, and G. W. Hull, Jr.* 391
43. Carbon and Semiconductor Thermometers for Low Temperatures, *P. Lindenfeld* 399
44. Resistance Thermometry in the Liquid Helium Temperature Region, *M. H. Edlow and H. H. Plumb* 407
45. Recent Experiments on Liquid Helium Vapor Pressure Measurements from  $2^{\circ}$  to  $4^{\circ}\text{K}$ , *G. Cataland, M. H. Edlow, and H. H. Plumb* 413

## SECTION IX: OPTICAL PYROMETRY

46. Radiation of Thermal Energy from Real Bodies, *R. J. Thorn and G. H. Winslow* 421

47. Theory and Methods of Optical Pyrometry, <i>H. J. Kostkowski and R. D. Lee</i>	449
48. A New Optical Method for the Determination of Thermodynamic Temperatures of Glowing Metals, <i>Carl P. Tingwaldt and Hans Magdeburg</i>	483
49. Recent Advances in Optical Pyrometry, <i>D. R. Lovejoy</i>	487
50. The NBS Photoelectric Pyrometer of 1961, <i>R. D. Lee</i>	507
51. A Precision Photoelectric Optical Pyrometer, <i>J. Middlehurst and T. P. Jones</i>	517
52. A Precision Photon Counting Pyrometer, <i>Leonard H. Treiman</i>	523
53. Some Radiation Characteristics of Blackbody Sources, <i>K. Franson, S. Katz, and E. Raisen</i>	529
54. General Considerations Influencing the Design of a High-Accuracy Pyrometer, <i>Gene D. Nutter</i>	537
55. The Carbon Arc as a Radiation Standard, <i>M. R. Null and W. W. Lozier</i>	551

#### SECTION X: SPECTROSCOPIC METHODS OF MEASURING TEMPERATURES

56. Spectroscopic Methods of Temperature Measurements, <i>S. S. Penner</i>	561
57. Measurement of Electron Density and Temperature in Dense Plasmas by Application of Line Broadening Theory, <i>J. B. Shumaker, Jr., and W. L. Wiese</i>	575
58. Plasma Temperature: Relative Intensity of Spectral Lines, <i>W. E. Hill</i>	581
59. Experimental Proof of the Absence of Equilibrium in a Helium Arc, <i>A. T. Hattenburg and H. J. Kostkowski</i>	587
60. Determination of Properties of an Optically Thin Argon Plasma, <i>H. N. Olsen</i>	593
61. The Measurement of Helium Oscillator Strengths Using an Electromagnetic Shock Tube, <i>E. A. McLean</i>	607

#### SECTION XI: TEMPERATURE MEASUREMENTS IN PLASMAS OVER 100,000°K

62. Measurement Techniques in High-Energy Plasmas, <i>Hans R. Griem</i>	615
63. The Use of the Spectral Line Median in Determining Plasma Temperatures, <i>Harry Sadjian</i>	629
64. Application of Spectroscopic Temperature Measuring Methods to Definition of a Plasma Arc Flame, <i>Robert G. Nagler</i>	643
65. Ion Energy Evaluation from Spectrum Line Contours, <i>P. M. Griffin, J. R. McNally, Jr., and G. K. Werner</i>	651
66. Plasma Temperatures by Spectroscopy in the X-Ray Region, <i>T. F. Stratton</i>	663
67. Electron Temperature Measurements Above 100,000°K Using Radiation at the Electron Cyclotron Frequency, <i>W. B. Ard, Jr.</i>	679
68. Plasma Diagnostics with the Aid of Cyclotron Radiation, <i>Ludwig Oster</i>	685
69. Bremsstrahlung from an Ionized Plasma in the Radio Frequency Range, <i>Ludwig Oster</i>	689
70. Temperature Measurement in Plasmas by Thermal Neutron Scattering, <i>R. E. Barr, R. R. Boedeker, R. M. Delaney, P. D. Doherty, D. J. Manson, and A. H. Weber</i>	691

#### SECTION XII: TEMPERATURE MEASUREMENTS IN ASTROPHYSICS

71. Temperature Measurement from the Optical Continuum, <i>J. B. Zirker</i>	699
72. Some Problems in Temperature Measurements from Line Spectra, <i>J. T. Jefferies</i>	703
73. Temperature Measurements in the Solar Corona, <i>Donald E. Billings</i>	713
74. Temperature Determination in Solar Prominences, <i>Frank Q. Orrall</i>	723
75. Temperature in Meteoric Phenomena, <i>Allan F. Cook</i>	731

#### SECTION XIII: TEMPERATURE MEASUREMENTS IN GEOPHYSICS

76. The Measurement of Ocean Temperatures, <i>T. M. Dauphinee and H. Preston-Thomas</i>	739
77. Temperature Structure of the Upper Layer of the Sea and Its Variation with Time, <i>E. C. LaFond</i>	751

78. Measurement of Heat Flow Through the Ocean Floor, <i>R. P. Von Herzen, A. E. Maxwell, and J. M. Snodgrass</i>	769
79. Temperatures in the Continental Crust, <i>Sydney P. Clark, Jr.</i>	779
80. Temperatures in Permafrost, <i>Arthur H. Lachenbruch, Max C. Brewer, Gordon W. Greene, and B. Vaughn Marshall</i>	791
81. The Problem of Atmospheric Temperature Measurement, <i>H. D. Parry</i>	805
82. Atmospheric Temperature Measurements by Aerodynamic and Sound Propagation Techniques, <i>John W. Peterson</i>	811
83. The Concept of Temperature in the Upper Atmosphere, <i>G. W. Sharp</i>	819
Author Index	831
Subject Index	838
