Contents

Preface xi
Acknowledgments xiii
Glossary of Terms xv

1 Introduction

1.1. Historical Development 1
1.2. Organization of the Book 2
References 3

2 Review of Concepts

2.1. Network Theory 4
2.2. Feedback Theory 11
2.3. Representation and Properties of Noise 14
2.4. Trigonometric Identities 21
References 21

3 Loop Components and Systems Considerations

3.1. Introduction 23
3.2. Limiter-Discriminator 24
3.3. Low-Threshold Demodulation 37

3.4. Filtering of FM Carriers 40
3.5. Voltage-Controlled Oscillator 42
3.6. Phase Detectors 44
References 46

4 FM Feedback Loop Principles

4.1. Operational Principles 49
4.2. The Linear Equivalent Circuit 53
4.3. Linear Operation of the Loop 57
4.4. Nonlinear Operation 65
4.5. Effect of Excess Delay 73
References 75

5 Phase-Locked Loop Principles

5.1. Operational Principles 76
5.2. The Linear Equivalent Circuit 80
5.3. Linear Operation 84
5.4. Nonlinear Operation 95
5.5. Excess Delay and Minimum Noise Bandwidth 110
References 112

6 Design of Phase-Locked Loops for FM Demodulation

6.1. FM Improvement Region 113
6.2. Distortion-Limited Region 122
6.3. Threshold-Limited Region 132
6.4. Step-by-Step Design Procedure and Examples 154
References 168

7 Design of Frequency-Feedback Loops for FM Demodulation

7.1. FM Improvement Region 170
7.2. Distortion-Limited Region 177
7.3. Threshold-Limited Region 195
7.4. Step-by-Step Design Procedure and Examples 215
References 224

8 Design of Compound and Multiple Loops for Low-Threshold Demodulation

8.1. General Design Considerations 227
8.2. The FMFB-PLL Compound Loop 231

8.3. The FMFB-FMFB Compound Loop 239
8.4. Extended-Range Phase-Locked Demodulator (ERPLD) and the FMFB-ERPLD 247
References 264

9 **Digital FM and Other PLL Applications**

9.1. Introduction to Digital FM Systems 266
9.2. Binary Error Rates with Limiter-Discriminator Demodulation 274
9.3. Binary FM Demodulation with Angular-Feedback Demodulators 283
9.4. Other PLL Applications 295
References 300

10 **Testing and Evaluation Procedures**

10.1. Component Tests 304
10.2. Loop Tests 313
10.3. Systems Tests of FM Demodulators 323
References 338

Appendix A **Derivation of Angle-Modulation Improvement Equations** 339

Appendix B **Derivation of the Discriminator Baseband Response** 344

Appendix C **The Ideal Demodulator** 346

Appendix D **Varactor VCO Distortion** 348

Appendix E **Baseband-Equivalent Response of a Single-Tuned Circuit to a Small-Index Off-Tuned FM Carrier** 351

Appendix F **Calculation of Minimum Noise Bandwidth and Loop Filter Zero Constant for the FMFB** 353

Bibliography 355
