Preface	xi
Acknowledgements	xv
1 Introduction	1
1.1 Introduction	1
1.2 Chapter preview	2
1.3 Classification of problems	4
1.3.1 Initial-value problems	4
1.3.2 Boundary-value problems	5
1.3.3 Two-time-scale systems	5
1.3.4 Discrete time systems	6
1.3.5 Open-loop optimal control problems	6
1.3.6 Closed-loop optimal control problems	6
1.3.7 Classical control problems	7
1.3.8 Time-delay systems	8
1.3.9 Observers	9
1.3.10 High-gain feedback systems	9
1.3.11 Multimodelling	11
1.3.12 Differential games	12
1.3.13 Time-optimal control problems	13
1.3.14 Stochastic systems	14
1.3.15 Adaptive control systems	15
1.3.16 Distributed parameter systems	16
1.4 Applications	16
1.4.1 Fluid dynamics	16
1.4.2 Electrical circuits and machines	17
1.4.3 Electrical power systems	18
1.4.4 Aerospace systems	18

1.4.5	Chemical reaction, diffusion and reactor control systems	19
1.4.6	Biology and biochemistry	20
1.4.7	Ecology	20
1.4.8	Other applications	21
2	Singular perturbation method	22
2.1	Singular perturbations in continuous systems	22
2.1.1	Definition and features	22
2.1.2	Linear control systems	27
2.1.3	Nonlinear control systems	28
2.2	Singular perturbations in discrete systems	30
2.2.1	Definition and features	30
2.2.2	Linear control systems	33
2.3	Singular perturbation method for continuous systems	36
2.3.1	Vasileva's method for initial-value problems	36
2.3.2	Boundary-layer method	48
2.3.3	Boundary-value problems	54
2.3.4	Structural properties	57
2.4	Singular perturbation method for discrete systems	59
2.4.1	Initial-value problems	59
2.4.2	Boundary-value problems	63
2.5	Discussion and conclusion	72
3	Time-scale analysis	76
3.1	Block diagonalisation of continuous systems	77
3.1.1	Problem and derivation	77
3.1.2	Numerical aspects	78
3.1.3	Basic properties	79
3.2	Permutation and scaling	81
3.3	Singularly perturbed continuous systems as two-time-scale systems	85
3.4	Feedback control design	87
3.5	Block diagonalisation of discrete systems	91
3.5.1	Problem formulation and derivation	91
3.5.2	Basic properties and numerical aspects	92
3.6	Singularly perturbed discrete systems as two-time-scale systems	95
3.7	Close-loop eigenvalue placement	98
3.8	Three-time-scale systems	100
3.8.1	Statement of the problem	100
3.8.2	Three-stage transformations	102
3.8.3	Numerical algorithm	104
3.9	Discussion and conclusion	107

4	Open-loop optimal control of continuous systems	110
4.1	Formulation of the linear problem	111
4.2	Singular perturbation method	114
4.2.1	Outer expansion	115
4.2.2	Initial boundary-layer correction	116
4.2.3	Final boundary-layer correction	117
4.2.4	Asymptotic expansions for the optimal control and cost	119
4.2.5	Total series solution	120
4.3	Fixed-end-point problem	129
4.4	Nonlinear systems	130
4.4.1	Formulation of the problem	130
4.4.2	Asymptotic expansions	133
4.5	Conclusions and discussion	140
5	Open-loop optimal control of discrete systems	142
5.1	Three-time-scale discrete systems	142
5.1.1	State-space model	142
5.1.2	Analysis	145
5.1.3	Three-time-scale property	145
5.2	Open-loop optimal control problem	148
5.3	Singular perturbation method	150
5.3.1	Outer series	152
5.3.2	Initial boundary-layer correction series	153
5.3.3	Final boundary-layer correction series	154
5.3.4	Total series solution	154
5.4	Conclusions and discussion	160
6	Closed-loop optimal control of continuous systems	162
6.1	Linear regulator problem	163
6.2	Singular perturbation method	164
6.2.1	Outer-series solution	165
6.2.2	Inner- and intermediate-series solutions	166
6.2.3	Main results	169
6.3	Steady-state regulator problem	175
6.4	Fixed-end-point problem	184
6.4.1	Problem formulation	186
6.4.2	Outer series	189
6.4.3	Inner and intermediate series	190
6.4.4	Main results	193
6.5	Time-scale analysis	197
6.5.1	Slow and fast subsystems	198
6.5.2	Subsystem regulator designs	202
6.6	Conclusions and discussion	206

7	Closed-loop optimal control of discrete systems	209
7.1	Nonlinear difference equations	209
7.1.1	Initial-value problem	210
7.1.2	Boundary-value problem	213
7.2	Closed-loop optimal control problem	213
7.3	Singular perturbation method	215
7.3.1	Boundary-layer correction	215
7.3.2	Outer and correction series	217
7.3.3	Total series solution	218
7.4	Steady-state solution	227
7.5	Time-scale analysis of a regulator problem	233
7.5.1	Slow and fast subsystems	236
7.5.2	Original and subsystem regulator problems	237
7.5.3	Composite control	239
7.6	Discussion and conclusion	244
7.7	Appendices	245
	References	249
	Index	285
