<i>List of Contributors</i>	v
<i>Preface</i>	vii

## RANDOM EIGENVALUE PROBLEMS

*William E. Boyce*

I Introduction	2
II Self-Adjoint Eigenvalue Problems	7
III Some Results from Probability Theory	22
IV Methods of the First Kind—Honest Methods	29
V Methods of the Second Kind—Dishonest Methods	43
VI Examples	53
References	71

## WAVE PROPAGATION IN RANDOM MEDIA

*U. Frisch*

I Introduction	76
II Some Mathematical Difficulties	79
III Exact Solutions and Reducible Problems	92
IV Formal Perturbation Methods	104
V Wave Propagation in Continuous Random Media	128
VI Multiple Scattering by Randomly Distributed Scatterers	159
VII Relations to Other Theories	177
VIII Conclusion	185
Appendix: Functional Integration	188
References	191

BRANCHING PROCESSES IN NEUTRON TRANSPORT  
THEORY*T. W. Mullikin*

I	Introduction	199
II	The Galton–Watson Process of One Type	202
III	The Galton–Watson Process for Arbitrary Types	220
IV	Neutron Branching Processes	254
	References	278
	<i>Author Index</i>	283
	<i>Subject Index</i>	288
