Contents

PART 1 **Organizing Data and Some Simple Computations** **1**

1.1 Blocking and Tabling of Data 2
1.2 Range and Standard Deviation 4
1.3 Standard Error of the Mean 6
1.4 Sample Size and the Power of Hypothesis Tests 7
1.5 The *t*-Test for a Difference Between a Sample Mean and the Population Mean 8
1.6 The *t*-Test for a Difference Between Two Independent Means 10
1.7 The *t*-Test for Related Measures 13
1.8 Sandler's *A* Test 17

PART 2 **Analysis of Variance** **18**

2.1 Completely Randomized Design 24
2.2 Factorial Design: Two Factors 27
2.3 Factorial Design: Three Factors 31
2.4 Treatments-by-Levels Design 39
2.5 Treatments-by-Subjects, or Repeated-Measures, Design 44
2.6 Treatments-by-Treatments-by-Subjects, or Repeated-Measures: Two-Factors, Design 48
2.7 Two-Factor Mixed Design: Repeated Measures on One Factor 55
2.8 Three-Factor Mixed Design: Repeated Measures on One Factor 62
2.9 Three-Factor Mixed Design: Repeated Measures on Two Factors 73
2.10 Latin Square Design: Simple 84
2.11 Latin Square Design: Complex 92

PART 3 **Supplemental Computations for Analysis of Variance** **107**

3.1 Test for Difference Between Variances of Two Independent Samples (Test for Homogeneity of Independent Variances) 109
3.2 Test for Difference Between Variances of Two Related Samples (Test for Homogeneity of Related Variances) 110
3.3 Test for Differences Among Several Independent Variances (*F*-Maximum Test for Homogeneity of Variances) 112
3.4 The *t*-Test for Differences Among Several Means 113
3.5 Duncan's Multiple-Range Test 116
3.6 The Newman-Keuls' Multiple-Range Test 119
3.7 The Tukey Test 122
3.8 Scheffé's Test 125
3.9 Dunnett's Test 128
3.10 *F*-Tests for Simple Effects 132
3.11 Use of Orthogonal Components in Tests for Trend 143

PART 4 **Correlation and Related Topics** **169**

4.1 Pearson Product-Moment Correlation 171
4.2 Spearman Rank-Order Correlation (*rho*) 175
4.3 Kendall Rank-Order Correlation (*tau*) 178
4.4 Point-Biserial Correlation 182
4.5 The Correlation Ratio (*eta*) 185
4.6 Partial Correlation: Three Variables 187
4.7 Partial Rank-Order Correlation (Using Kendall's *tau*) 189
4.8 Multiple Correlation: Three Variables 187
4.9 Simple Analysis of Covariance: One Treatment Variable 192
4.10 Factorial Analysis of Covariance: Two Treatment Variables 198
4.11 Reliability of Measurement: The Test As a Whole (Test-Retest, Parallel Forms, and Split Halves) 209
4.12 Reliability of Measurement: The Individual Items (Kuder-Richardson and Hoyt) 211
4.13 Test for Difference Between Independent Correlations 214
4.14 Test for Difference Between Dependent Correlations 215

PART 5 **Nonparametric Tests, Miscellaneous Tests of Significance, and Indexes of Relationship** **218**

5.1 Test for Significance of a Proportion 220
5.2 Test for Significance of Difference Between Two Proportions 222
5.3 The Mann-Whitney *U*-Test for Differences Between Independent Samples 224
5.4 A Sign Test (Wilcoxon) for Differences Between Related Samples 228
5.5 Simple Chi-Square and the *Phi* Coefficient 230
5.6 Complex Chi-Square and the Contingency Coefficient (*C*) 233

APPENDIXES **238**

A Normal-Curve Areas 238
B Critical Values of "Student's" *t* Statistic 240
C Critical Values for Sandler's *A* Statistic 242
D Centile Values of the Chi-Square Statistic 244
E Per Cent Points in the *F* Distribution 246
F Fisher's *z* Transformation Function for Pearson's *r* Correlation Coefficient 250
G Critical Values of Pearson's *r* Correlation Coefficient for Five Alpha Significance Levels 252
H Critical Values of the *U* Statistic of the Mann-Whitney Test 254
I Critical Values for Hartley's Maximum *F*-Ratio Significance Test for Homogeneity of Variances 258
J Significant Studentized Ranges for Duncan's New Multiple-Range Test 260
K Significant Studentized Ranges for the Newman-Keuls' and Tukey Multiple-Comparison Tests 263
L Dunnett's Test: Comparison of Treatment Means with a Control 266
M Critical Values of Wilcoxon's *T* Statistics for the Matched-Pairs Signed-Ranks Test 268
N Coefficients for Orthogonal Polynomials 269
O Sample Computer Programs for Various Analyses 270
O-1 Program for the *t*-Test for a Difference Between Two Independent Means 271

O-2 Program for the *t*-Test for Related Measures 272
O-3 Program for the Completely Randomized Design 273
O-4 Program for Factorial Design: Two Factors 274
O-5 Program for Treatments-by-Treatments-by-Subjects Design 276
O-6 Program for the Treatments-by-Subjects, or Repeated-Measures, Design and the Two-Factor Mixed Design: Repeated Measures on One Factor 278
O-7 Program for the Three-Factor Mixed Design: Repeated Measures on One Factor 281
O-8 Program for Three-Factor Mixed Design: Repeated Measures on Two Factors 285
O-9 Program for Latin Square Design: Simple 292
O-10 Program to Compute Pearson Product-Moment Correlations or Reliability of Measurement Indexes for Two or More Variables 296
O-11 Program to Compute Simple and Factorial Analyses of Covariance with One or Two Treatment Variables 297
O-12 PRBF—Function to Compute Probability Values 300
O-13 PRTS—Subroutine to Print Out Tables of Means 300
