Preface	ix
1 Simple Linear Regression	1
1.1 Introduction: building a model	2
1.2 Fitting a model	5
1.3 Using a model: confidence intervals and hypothesis tests	12
1.4 Criticizing a model: residual plots	23
1.5 A brief review of some elementary concepts of statistics	28
2 More on Regression and Correlation	33
2.1 Comparing models: analysis of variance	33
2.2 Some further techniques	39
2.3 The correlation coefficient	45
3 One-way Analysis of Variance	54
3.1 The one-way design	54
3.2 Least squares and the analysis of variance	59
3.3 Confidence intervals and multiple comparisons	65
3.4* Relations among treatments	69
4 Two-way Analysis of Variance	77
4.1 Informal analysis	78
4.2 Formal analysis	84
4.3 Randomized block design	94
5* More on Two-way Analysis of Variance	99
5.1 Interactions	99
5.2 Non-orthogonal designs	111

6	Comparing Regression Lines: Analysis of Covariance	117
7	Multiple Regression	129
7.1	More than one explanatory variable	129
7.2	Model checking	142
8	More on Multiple Regression	147
8.1	Tests and confidence intervals	147
8.2	Model selection and multicollinearity	157
Appendix 1	Running the Programs	173
Appendix 2	Use of the Editor and Datafiles	175
Appendix 3	Program Descriptions	177
Appendix 4	Derivation of Some Key Results	188
Appendix 5	Answers to Exercises	194
Appendix 6	Statistical Tables	201
	Bibliography	206
	Index	209
