	<i>Preface</i>	v
1	PROBLEM FORMULATION	1
1.1	Introduction	1
1.2	Statement of the discrete optimal control problem	4
1.3	A Canonical form of the discrete optimal control problem	7
1.4	The mathematical programming problem	9
1.5	Equivalence of the optimization problems	10
2	CONDITIONS OF OPTIMALITY FOR THE BASIC PROBLEM	13
2.1	Introduction	13
2.2	A first approach to necessary conditions	14
2.3	The fundamental theorem	23
	<i>A few second-order conditions of optimality</i>	35
	<i>Conditions for $\psi^0 < 0$ in theorem (12)</i>	37
	<i>Problems without differentiability assumptions</i>	38
2.4	The two-point-boundary-value optimal control problem	39
		ix

3	SOME NECESSARY AND SOME SUFFICIENT CONDITIONS FOR NONLINEAR PROGRAMMING PROBLEMS	49
3.1	Introduction	49
3.2	Theory of LaGrange multipliers	50
3.3	The Kuhn-Tucker theory	54
3.4	General nonlinear programming problems	60
3.5	A further generalization	67
3.6	A sufficient condition	70
	<i>An extension to quasi-convex and pseudoconvex functions</i>	72
4	DISCRETE OPTIMAL CONTROL PROBLEMS	75
4.1	The general case	75
	<i>Conditions for $p^0 < 0$</i>	82
4.2	A maximum principle	84
5	OPTIMAL CONTROL AND LINEAR PROGRAMMING	98
5.1	Introduction	98
5.2	Linear control problems	99
5.3	Control problems with linear dynamics, linear constraints, and piecewise-linear cost	101
5.4	The Canonical linear programming problem	105
5.5	Characterization of an optimal solution to the Canonical linear programming problem	106
5.6	Some preliminary remarks on the Simplex algorithm	109
5.7	Procedure for determining an initial extreme point of Ω'	111
5.8	Generating improved adjacent extreme points	112
5.9	The Simplex algorithm	117
5.10	Resolution of degeneracy	119
5.11	Bounded-variable linear programming	125
6	OPTIMAL CONTROL AND QUADRATIC PROGRAMMING	130
6.1	Formulation of the general control problem with quadratic cost and transformation to a quadratic programming problem	130
6.2	The existence of an optimal solution to the quadratic programming problem	132
6.3	A sufficient condition for a unique optimal solution to the quadratic programming problem	137

6.4	Necessary and sufficient conditions of optimality for the quadratic programming problem	139
6.5	Applications to unbounded control problems	140
	Solution of (1) by direct transcription	140
	Solution of (1) by alternative transcription	144
	<i>The control approach to the minimum-energy problem</i>	145
	<i>Solution of (53) by direct transcription</i>	150
	<i>Solution of (53) by alternative transcription</i>	151
6.6	Quadratic Control problems with inequality constraints	154
6.7	Optimality conditions for the Canonical quadratic programming problem	156
6.8	The derived minimization problem	157
6.9	The simplex algorithm for quadratic programming	159
6.10	A further generalization	163
6.11	Convergence	168

7 CONVEX PROGRAMMING ALGORITHMS 177

7.1	Introduction	177
7.2	Methods of feasible directions	179
7.3	Steepest descent and gradient projection	196
	<i>Unconstrained minimization problems</i>	197
	<i>Gradient projection: a special case</i>	199
	<i>Gradient projection: the general case</i>	201
7.4	Penalty functions	205
	<i>Exterior penalty functions</i>	206
	<i>Interior penalty functions</i>	211

8 FREE-END-TIME OPTIMAL CONTROL PROBLEMS 214

8.1	Description of the free-end-time problem	214
8.2	The free-end-time problem as a sequence of fixed-time problems	215
8.3	The first time for which a free-end-time problem has a feasible solution: the minimum-time problem	218
8.4	A linear minimum-time problem	221
8.5	A geometric approach to the linear minimum-time problem	224

Appendixes 231

A CONVEXITY 231

A.1	Introduction	231
A.2	Lines and hyperplanes	231

A.3	Convex sets	233
A.4	Convex cones	240
A.5	Separation of sets: supporting hyperplanes	245
A.6	Convex functions	252

B	CONSTRAINED MINIMIZATION PROBLEMS IN INFINITE-DIMENSIONAL SPACES	259
----------	---	------------

B.1	An extension of the fundamental theorem (2.3.12)	259
B.2	The maximum principle	262

	<i>Glossary of Symbols</i>	277
--	----------------------------	-----

	<i>Index</i>	281
