

# *Contents*

<i>Preface</i>	ix
<b>Introduction</b>	1
<b>Chapter 1 Background: Function Theory</b>	
1.1 Harmonic Functions	10
1.2 Positive Harmonic Functions on the Upper Half-Plane	13
1.3 Analytic Functions of Exponential Type	16
1.4 Phragmén–Lindelöf Principle	17
1.5 Poisson–Jensen Formula	18
1.6 Quotients of Exponential Type	20
1.7 Carlson’s Theorem	21
1.8 Hadamard Products	21
1.9 Nevanlinna’s Formula	22
<b>Chapter 2 Background: Hardy Functions</b>	
2.1 Fourier Integrals	26
2.2 Paley–Wiener Theorem	28
2.3 Hardy Functions of Class $\mathbf{H}^2$	30
2.4 Projection	33
2.5 A Basis	34
2.6 An Inequality	35
2.7 Inner and Outer Functions	36
2.8 Tests for Outer Functions	39
2.9 Hardy Functions of Class $\mathbf{H}^1$	42
2.10 Hardy Functions of Class $\mathbf{H}^\infty$	46
2.11 Hilbert Transforms and Conjugate Functions	48
2.12 Phases	52
2.13 Inner Functions Again	53
2.14 Quasi-Analytic Classes	55
<b>Chapter 3 Background: Probability</b>	
3.1 Gaussian Families	61
3.2 Independence and Perpendicularity	63
3.3 Angles	65
3.4 Degree of Independence	67
3.5 Mutual Information	68
3.6 Kolmogorov’s Modulus	69

3.7 Stationary Gaussian Processes	71
3.8 Spectral Functions	74
3.9 Metric Transitivity	76
3.10 Ivankov's Alternative	78

## Chapter 4 Past and Future

4.1 Kolmogorov–Wiener Prediction Problem	82
4.2 Szegő's Alternative	83
4.3 Doing the Prediction	87
4.4 Wiener's Formula	90
4.5 Filters and White Noise	92
4.6 Past and Future	96
4.7 Rational Spectral Densities	100
4.8 Type Spaces	108
4.9 Splitting	117
4.10 Germ and Gap	121
4.11 Okabe's Formulas	126
4.12 Mixing	130
4.13 Interpolation	136

## Chapter 5 Strings and Spectral Functions

5.1 Strings	147
5.2 Self-Adjoint Operators	153
5.3 Feller's Theorem	159
5.4 Green Functions	162
5.5 Principal Spectral Functions	176
5.6 Traces	181
5.7 Transforms	185
5.8 The Backwards Problem	194
5.9 Stieltjes' Investigations	203
5.10 Nonprincipal Spectral Functions	208

## Chapter 6 Strings and Spaces of Integral Functions

6.1 De Branges Spaces	221
6.2 Short de Branges Spaces	228
6.3 Short Spaces and Short Strings	233
6.4 Type Spaces	241
6.5 Nesting of Short Spaces	247
6.6 Recovering the String	252
6.7 Hardy Densities	255
6.8 Dual Strings	262
6.9 Change of Scale and Mass	264
6.10 Prediction Using Part of the Past	279
6.11 Short Processes	291
6.12 A New Class of Strings	293
6.13 Strings for Interpolation	306
6.14 Interpolation: Examples	318
