CHAPTER	PAGE
I THE EXPONENTIAL AND THE UNIFORM DENSITIES	1
1. Introduction	1
2. Densities. Convolutions	3
3. The Exponential Density	8
4. Waiting Time Paradoxes. The Poisson Process . . .	10
5. The Persistence of Bad Luck	15
6. Waiting Times and Order Statistics	17
7. The Uniform Distribution	20
8. Random Splittings	24
9. Convolutions and Covering Theorems	26
10. Random Directions	29
11. The Use of Lebesgue Measure	33
12. Empirical Distributions	36
13. Problems for Solution	39
II SPECIAL DENSITIES. RANDOMIZATION	44
1. Notations and Conventions.	44
2. Gamma Distributions	46
*3. Related Distributions of Statistics	47
4. Some Common Densities.	48
5. Randomization and Mixtures.	52
6. Discrete Distributions	55
7. Bessel Functions and Random Walks	57
8. Distributions on a Circle	60
9. Problems for Solution	63
III DENSITIES IN HIGHER DIMENSIONS. NORMAL DENSITIES AND PROCESSES.	65
1. Densities	65
2. Conditional Distributions	70
3. Return to the Exponential and the Uniform Distributions	73

*4.	A Characterization of the Normal Distribution . . .	77
5.	Matrix Notation. The Covariance Matrix	80
6.	Normal Densities and Distributions	82
6a.	Appendix: Rotations	86
*7.	Stationary Normal Processes	87
8.	Markovian Normal Densities	93
9.	Problems for Solution	98
IV	PROBABILITY MEASURES AND SPACES	101
1.	Baire Functions	102
2.	Interval Functions and Integrals in $\mathcal{R}^r$	104
3.	Probability Measures and Spaces	110
4.	Random Variables. Expectations	112
5.	The Extension Theorem	116
6.	Product Spaces. Sequences of Independent Variables	118
7.	Null Sets. Completion.	123
V	PROBABILITY DISTRIBUTIONS IN $\mathcal{R}^r$	125
1.	Distributions and Expectations	126
2.	Preliminaries	133
3.	Densities	136
*3a.	Singular Distributions	138
4.	Convolutions	140
5.	Symmetrization	146
6.	Integration by Parts. Existence of Moments	148
7.	Chebyshev's Inequality.	149
8.	Further Inequalities. Convex Functions	150
9.	Simple Conditional Distributions. Mixtures	154
*10.	Conditional Distributions	157
*10a.	Conditional Expectations.	160
11.	Problems for Solution	162
VI	A SURVEY OF SOME IMPORTANT DISTRIBUTIONS AND PROCESSES.	165
1.	Stable Distributions in $\mathcal{R}^1$	165
2.	Examples	170
3.	Infinitely Divisible Distributions in $\mathcal{R}^1$	173
4.	Processes with Independent Increments	177
*5.	Ruin Problems in Compound Poisson Processes	179
6.	Renewal Processes	181
7.	Examples and Problems	185
8.	Random Walks	189

9.	The Queuing Process	193
10.	Persistent and Transient Random Walks	199
11.	General Markov Chains	205
*12.	Martingales	210
13.	Problems for Solution	215
VII	LAWS OF LARGE NUMBERS. APPLICATIONS IN ANALYSIS	218
1.	Main Lemma and Notations	218
2.	Bernstein Polynomials. Absolutely Monotone Functions	220
3.	Moment Problems	222
*4.	Application to Exchangeable Variables	225
*5.	Generalized Taylor Formula and Semi-groups	227
6.	Inversion Formulas for Laplace Transforms	229
*7.	Laws of Large Numbers for Identically Distributed Variables.	231
8.	Strong Laws for Martingales	234
9.	Problems for Solution	239
VIII	THE BASIC LIMIT THEOREMS	241
1.	Convergence of Measures	241
2.	Special Properties	245
3.	Distributions as Operators	248
4.	The Central Limit Theorem	252
*5.	Infinite Convolutions	259
6.	Selection Theorems	260
*7.	Ergodic Theorems for Markov Chains	264
8.	Regular Variation	268
*9.	Asymptotic Properties of Regularly Varying Functions	272
10.	Problems for Solution	276
IX	INFINITELY DIVISIBLE DISTRIBUTIONS AND SEMI-GROUPS. .	281
1.	Orientation	281
2.	Convolution Semi-groups	284
3.	Preparatory Lemmas	287
4.	Finite Variances	289
5.	The Main Theorems	291
*5a.	Discontinuous Semi-groups	296
6.	Example: Stable Semi-groups	296
7.	Triangular Arrays	298
8.	Domains of Attraction	302
9.	Variable Distributions. The Three-series Theorem	306
10.	Problems for Solution	309

X	MARKOV PROCESSES AND SEMI-GROUPS	311
1.	The Pseudo-Poisson Type	312
2.	A Variant: Linear Increments	314
3.	Jump Processes	316
4.	Diffusion Processes in $\mathcal{R}^1$	320
5.	The Forward Equation: Boundary Conditions	326
6.	Diffusion in Higher Dimensions	331
7.	Subordinated Processes	333
8.	Markov Processes and Semi-groups	337
9.	The "Exponential Formula" of Semi-group Theory	341
10.	Generators. The Backward Equation	343
XI	RENEWAL THEORY	346
1.	The Renewal Theorem	346
*2.	The Equation $\zeta = F \star \zeta$	351
3.	Persistent Renewal Processes	353
4.	Refinements	357
5.	The Central Limit Theorem	358
6.	Terminating (Transient) Processes	360
7.	Applications	363
8.	Existence of Limits in Stochastic Processes	365
*9.	Renewal Theory on the Whole Line	367
10.	Problems for Solution	371
XII	RANDOM WALKS IN $\mathcal{R}^1$.	373
1.	Notations and Conventions.	374
2.	Duality	377
3.	Distribution of Ladder Heights. Wiener-Hopf Factorization	381
3a.	The Wiener-Hopf Integral Equation	385
4.	Examples	386
5.	Applications	390
6.	A Combinatorial Lemma.	393
7.	Distribution of Ladder Epochs	394
8.	The Arc Sine Laws	397
9.	Miscellaneous Complements	402
10.	Problems for Solution	403
XIII	LAPLACE TRANSFORMS. TAUBERIAN THEOREMS. RESOLVENTS	407
1.	Definitions. The Continuity Theorem	407
2.	Elementary Properties	411
3.	Examples	413

4.	Completely Monotone Functions. Inversion Formulas	415
5.	Tauberian Theorems.	418
*6.	Stable Distributions	424
*7.	Infinitely Divisible Distributions	425
*8.	Higher Dimensions	428
9.	Laplace Transforms for Semi-groups.	429
10.	The Hille-Yosida Theorem	433
11.	Problems for Solution	437
 XIV	 APPLICATIONS OF LAPLACE TRANSFORMS	 441
1.	The Renewal Equation: Theory.	441
2.	Renewal-Type Equations: Examples.	443
3.	Limit Theorems Involving Arc Sine Distributions	445
4.	Busy Periods and Related Branching Processes . . .	448
5.	Diffusion Processes	450
6.	Birth-and-Death Processes and Random Walks . . .	454
7.	The Kolmogorov Differential Equations	457
8.	Example: The Pure Birth Process	463
9.	Calculation of $P(\infty)$ and of First-passage Times	465
10.	Problems for Solution	469
 XV	 CHARACTERISTIC FUNCTIONS.	 472
1.	Definition. Basic Properties	472
2.	Special Densities. Mixtures	475
3.	Uniqueness. Inversion Formulas	480
4.	Regularity Properties	484
5.	The Central Limit Theorem for Equal Components	487
6.	The Lindeberg Conditions	491
7.	Characteristic Functions in Higher Dimensions . . .	494
*8.	Two Characterizations of the Normal Distribution	498
9.	Problems for Solution	500
 XVI	 EXPANSIONS RELATED TO THE CENTRAL LIMIT THEOREM	 504
1.	Notations	505
2.	Expansions for Densities	506
3.	Smoothing	510
4.	Expansions for Distributions	512
5.	The Berry-Essén Theorem	515
6.	Large Deviations	517
7.	Unequal Components	521
8.	Problems for Solution	524

XVII	INFINITELY DIVISIBLE DISTRIBUTIONS	526
1.	A Convergence Theorem	526
2.	Infinitely Divisible Distributions	531
3.	Examples and Special Properties	536
4.	Stable Characteristic Functions	540
5.	Domains of Attraction	543
*6.	Stable Densities	548
7.	Triangular Arrays	550
*8.	The Class L	553
*9.	Partial Attraction. "Universal Laws"	555
*10.	Infinite Convolutions	558
11.	Higher Dimensions	559
12.	Problems for Solution	560
XVIII	APPLICATIONS OF FOURIER METHODS TO RANDOM WALKS	564
1.	The Basic Identity	564
*2.	Finite Intervals. Wald's Approximation	566
3.	Wiener-Hopf Factorization	569
4.	Discussion and Applications	572
*5.	Refinements	575
6.	Returns to the Origin	576
7.	Criteria for Persistency.	577
8.	Problems for Solution	580
XIX	HARMONIC ANALYSIS	582
1.	The Parseval Relation	582
2.	Positive Definite Functions	584
3.	Stationary Processes	586
4.	Fourier Series	589
*5.	The Poisson Summation Formula	592
6.	Positive Definite Sequences	595
7.	L^2 Theory	597
8.	Stochastic Processes and Integrals	602
9.	Problems for Solution	608
	ANSWERS TO PROBLEMS	611
	SOME BOOKS ON COGNATE SUBJECTS	615
	INDEX	619
