

Table of Contents

Introduction	1
Chapter I. Basic Definitions and Properties of Markov Processes	8
§ 1. Wide-Sense Markov Processes	8
§ 2. Markov Random Functions	34
§ 3. Markov Processes	39
§ 4. Strong Markov Process	50
§ 5. Multiplicative Functionals	63
§ 6. Properties of Sample Functions of Markov Processes	73
Chapter II. Homogeneous Markov Processes	85
§ 1. Basic Definitions	85
§ 2. The Resolvent and the Generating Operator of a Weakly Measurable Markov Process	90
§ 3. Stochastically Continuous Processes	101
§ 4. Feller Processes in Locally Compact Spaces	108
§ 5. Strong Markov Processes in Locally Compact Spaces	125
§ 6. Multiplicative Additive Functionals, Excessive Functions	161
Chapter III. Jump Processes.	187
§ 1. General Definitions and Properties of Jump Processes	187
§ 2. Homogeneous Markov Processes with a Countable Set of States	197
§ 3. Semi-Markov Processes	226
§ 4. Markov Processes with a Discrete Component	250
Chapter IV. Processes with Independent Increments	258
§ 1. Definitions. General Properties	258
§ 2. Homogeneous Processes with Independent Movements. One-Dimensional Case	282

§ 3. Properties of Sample Functions of Homogeneous Processes with Independent Increments in \mathcal{R}^1	315
§ 4. Finite-Dimensional Homogeneous Processes with Independent Increments	340
Chapter V. Branching Processes	377
§ 1. Branching Processes with Finite Number of Particles	377
§ 2. Branching Processes with a Continuum of States	409
§ 3. General Markov Processes with Branching	417
Historical and Bibliographical Remarks	433
Bibliography	436
Subject Index	440
