

# Contents

<i>Preface</i> . . . . .	vii
Chapter 1. Mathematical Concepts . . . . .	1
1.1 Matrices . . . . .	1
1.2 Quadratic Forms . . . . .	3
1.3 Determinants . . . . .	6
1.4 Miscellaneous Theorems on Matrices . . . . .	6
1.5 The Derivatives of Matrices and Vectors . . . . .	11
1.6 Idempotent Matrices . . . . .	12
1.7 Maxima, Minima, and Jacobians . . . . .	17
Chapter 2. Statistical Concepts . . . . .	27
2.1 Sample Space, Random Variable, Frequency Function . . . . .	27
2.2 Statistical Inference . . . . .	32
2.3 Point Estimation . . . . .	33
2.4 Interval Estimation . . . . .	37
2.5 Testing Hypotheses . . . . .	39
2.6 Conclusion . . . . .	46
Chapter 3. The Multivariate Normal Distribution . . . . .	48
3.1 Definition . . . . .	48
3.2 Marginal Distributions . . . . .	51
3.3 Moments of the Multivariate Normal . . . . .	53
3.4 Linear Functions of Normal Variables . . . . .	56
3.5 Independence . . . . .	57
3.6 The Conditional Distribution . . . . .	62
3.7 Additional Theorems . . . . .	67
Chapter 4. Distribution of Quadratic Forms . . . . .	74
4.1 Introduction . . . . .	74
4.2 Noncentral Chi-square . . . . .	75

4.3 Noncentral $F$	77
4.4 Distribution of Quadratic Forms	82
4.5 Independence of Quadratic Forms	84
4.6 Independence of Linear and Quadratic Forms	86
4.7 Expected Value of Quadratic Forms	87
4.8 Additional Theorems	88
Chapter 5. Linear Models	93
5.1 Introduction	93
5.2 Linear Models	96
5.3 Model Classification	103
Chapter 6. Model 1: The General Linear Hypothesis of Full Rank	106
6.1 Introduction	106
6.2 Point Estimation	110
6.3 Interval Estimation	120
6.4 Tests of Hypotheses	128
Chapter 7. Computing Techniques	149
7.1 Introduction	149
7.2 Solving a System of Symmetric Equations	149
7.3 Computing the Inverse of a Symmetric Matrix	155
Chapter 8. Polynomial or Curvilinear Models	165
8.1 Introduction	165
8.2 Estimating and Testing Coefficients in a Polynomial Model	165
8.3 Finding the Degree of a Polynomial that Describes a Given Set of Data	166
8.4 Orthogonal Polynomials	172
8.5 Repeated Observations for Each $X$	183
Chapter 9. Model 2: Functional Relationships	186
9.1 Introduction and Definitions	186
9.2 Point Estimation	187
9.3 Interval Estimation and Tests of Hypotheses	193
Chapter 10. Model 3: Regression Models	195
10.1 Introduction	195
10.2 Case 1: The Multivariate Normal	197
10.3 Correlation	206
10.4 Case 2, Model 3	216
10.5 Case 3, Model 3	217
Chapter 11. Model 4: Experimental Design Models	223
11.1 Introduction	223
11.2 Point Estimation	226
11.3 Interval Estimation	241
11.4 Testing Hypotheses	241
11.5 Normal Equations and Computing	245
11.6 Optimum Properties of the Tests of Hypotheses	250
Chapter 12. The Cross-classification or Factorial Model	254
12.1 Introduction	254
12.2 The One-way Classification Model	255

12.3 Two-way Cross Classification: No Interaction . . . . .	258
12.4 $N$ -way Cross Classification: No Interaction . . . . .	261
12.5 Two-way Classification with Interaction . . . . .	265
12.6 $N$ -way Classification with Interaction . . . . .	272
12.7 $2^n$ Factorial Models . . . . .	279
12.8 Using Interaction Sum of Squares for Error Sum of Squares . . . . .	283
Chapter 13. Two-way Classification with Unequal Numbers in Subclasses . . . . .	287
13.1 Two-way Classification Model with No Interaction . . . . .	287
13.2 Computing Instructions . . . . .	302
Chapter 14. Incomplete Block Models . . . . .	306
14.1 Introduction . . . . .	306
14.2 Point Estimation . . . . .	309
14.3 Interval Estimation and Tests of Hypotheses . . . . .	312
14.4 Computing . . . . .	313
Chapter 15. Some Additional Topics about Model 4 . . . . .	318
15.1 Introduction . . . . .	318
15.2 Assumptions for Model 4 . . . . .	318
15.3 Tests of Hypotheses . . . . .	320
15.4 Test for Additivity . . . . .	324
15.5 Transformation . . . . .	332
Chapter 16. Model 5: Variance Components; Point Estimation . . . . .	337
16.1 One-way Classification: Equal Subclass Numbers . . . . .	338
16.2 The General Balanced Case of Model 5 . . . . .	347
16.3 Two-way Classification . . . . .	348
16.4 The Balanced Twofold and Fourfold Nested Classification of Model 5 . . . . .	349
16.5 One-way Classification with Unequal Numbers in the Groups . . . . .	351
16.6 Twofold Nested Classification in Model 5 with Unequal Numbers in the Subclasses . . . . .	354
16.7 The Unbalanced Two-way Classification in Model 5 . . . . .	359
16.8 The Balanced Incomplete Block in Model 5 . . . . .	362
Chapter 17. Model 5: Variance Components; Interval Estimation and Tests of Hypotheses . . . . .	368
17.1 Distribution of a Linear Combination of Chi-square Variates . . . . .	368
17.2 Tests of Hypotheses . . . . .	374
17.3 Ratio of Variances . . . . .	378
Chapter 18. Mixed Models . . . . .	383
18.1 Covariance . . . . .	383
18.2 Two-way Classification Model with Interaction and with Fixed and Random Effects . . . . .	396
18.3 Balanced Incomplete Block with Blocks Random: Recovery of Interblock Information . . . . .	403
Appendix. Tables . . . . .	421
<i>Index</i> . . . . .	461
