<i>Preface</i> . . . . .	v
 <b>Chapter I—Probability algebras</b>	
1. Definition and properties . . . . .	1
2. Probability subalgebras . . . . .	3
3. Isometric probability algebras . . . . .	3
4. Examples . . . . .	3
5. Separability relative to a probability . . . . .	7
6. Countably additive ( $\sigma$ -additive) probabilities . . . . .	7
7. Probability $\sigma$ -algebras . . . . .	10
8. Quasi-probability algebras . . . . .	12
9. Probability spaces . . . . .	13
 <b>Chapter II—Extension of probability algebras</b>	
1. The probability algebra as a metric space . . . . .	16
2. Construction of a $\sigma$ -extension of a probability algebra . . . . .	18
3. The linear Lebesgue probability $\sigma$ -algebra . . . . .	29
4. Classification of the $p$ -separable probability $\sigma$ -algebras . . . . .	33
 <b>Chapter III—Cartesian product of probability algebras</b>	
1. Cartesian product of Boolean algebras . . . . .	35
2. Product probability algebras . . . . .	40
3. Classification of probability $\sigma$ -algebras . . . . .	46
4. Representation of probability $\sigma$ -algebras by probability spaces . . . . .	51
5. Independence in probability . . . . .	53
 <b>Chapter IV—Stochastic spaces</b>	
1. Experiments (trials) in probability algebras . . . . .	55
2. Elementary random variables (elementary stochastic space) . . . . .	58
3. Convergence in stochastic spaces . . . . .	67
4. $\sigma$ -convergence in $\mathcal{E}$ with respect to a vector sublattice of $\mathcal{E}$ . . . . .	76
5. Extension of the elementary stochastic space . . . . .	89
6. Stochastic space of all bounded random variables . . . . .	96
7. Convergence in probability and almost uniform convergence . . . . .	97
8. Generators of the stochastic space . . . . .	103
9. Other convergences in the stochastic space . . . . .	106
10. Closure operator in the stochastic space . . . . .	109
11. Series convergence . . . . .	110
12. Composition of random variables . . . . .	120

**Chapter V—Expectation of random variables**

1. Expectation of elementary random variables . . . . . 122
2. The space  $\mathcal{L}_1$  of all rv's with expectation . . . . . 130
3. Signed measures . . . . . 138
4. The Radon–Nikodym Theorem . . . . . 142
5. Remarks . . . . . 144

**Chapter VI—Moments. Spaces  $\mathcal{L}_q$** 

1. Powers of rv's . . . . . 148
2. Moments of random variables . . . . . 149
3. The spaces  $\mathcal{L}_q$  . . . . . 151
4. Convergence in mean and equi-integrability. . . . . 154

**Chapter VII—Generalized random variables  
(Random variables having values in any space)**

1. Preliminaries . . . . . 161
2. Generalized elementary random variables . . . . . 162
3. Completion with respect to  $o$ -convergence . . . . . 163
4. Completion with respect to a norm . . . . . 179
5. Expectation of rv's having values in a Banach space . . . . . 187
6. The spaces  $\mathcal{L}_q$  of rv's having values in a Banach space. Moments. . . . . 212

**Chapter VIII—Complements**

1. The Radon–Nikodym theorem for the Bochner integral . . . . . 224
2. Conditional probability . . . . . 226
3. Conditional expectation . . . . . 228
4. Distributions of random variables . . . . . 230
5. Boolean homomorphisms of random variables . . . . . 232

**Appendix I—Lattices**

1. Partially ordered sets . . . . . 233
2. Lattices . . . . . 234
3. Boolean algebras . . . . . 237
4. Homomorphisms and ideals of a Boolean algebra . . . . . 242
5. Order convergence . . . . . 247
6. Closures . . . . . 248

**Appendix II—Lattice groups, vector lattices**

1. Lattice groups . . . . . 250
2. Vector lattices or linear lattice spaces . . . . . 253

Bibliographical Notes . . . . . 255

Bibliography . . . . . 257

List of Symbols . . . . . 261

Index . . . . . 263
