

CONTENTS

<i>Preface</i>	xi
<i>Acknowledgments</i>	xv

Chapter 1 Models

1.1 Prolegomenon	1
1.2 Categories of Models	3
1.3 A Cross Classification	9
1.4 Stochasticity and Randomness in Systems	11
1.5 The Uncertainty Principle of Modeling	14
1.6 Summary.	16

Chapter 2 The Stochastic Variate

2.1 Introductory Remarks	18
2.2 The Binomial Distribution	22
2.3 The Geometric Distribution	25
2.4 Parameters	27
2.5 Continuous Random Variables	27
2.6 Transformations of Random Variables	32
2.7 The CDF Transformation	40
2.8 Generation of Uniformly Distributed Random Variables	44
2.9 Testing Random Number Generators	58
2.10 Moments of Random Variables	67
2.11 Bivariate Distributions	74
2.12 The Central Limit Theorem	84
2.13 Other Techniques for Generating Random Variables	94
2.14 The Bivariate Normal Distribution	119
2.15 The Multivariate Normal Distribution	132

Chapter 3 Time Series

3.1 Introduction 147

3.2 Some Exemplary Time Series 154

3.3 Generation of Autocorrelated Random Variables 162

3.4 The Poisson Process 165

3.5 The Spectrum 175

3.6 Summary. 179

Chapter 4 The Monte Carlo Method

4.1 Experiments with Random Numbers 182

4.2 Buffon's Needle Problem 186

4.3 Numerical Integration Techniques 188

4.4 The Law of Large Numbers 193

4.5 Random Walks 194

4.6 Accuracy of Monte Carlo Estimates 198

4.7 Queues. 200

4.8 Monte Carlo versus Simulation 207

Chapter 5 Modeling

5.1 Stages of Model Development 209

5.2 Elements of Systems Analysis 213

5.3 Elements of System Synthesis 224

5.4 *Ad Hoc* Simulation Programming Languages 238

5.5 Model Verification 245

5.6 Model Validation 250

5.7 Model Analysis 254

5.8 A Scholium on Modeling 255

Chapter 6 Fundamentals of Simular Experimentation

6.1 Introduction 261

6.2 Statistical Analyses 265

6.3 Distributional Forms Attainable by Simular Responses 277

6.4 Estimation of Parameters in Simular Response Distributions 287

6.5 Statistical Comparisons 298

Chapter 7 Experimental Designs for Qualitative Factors

7.1 Introductory Remarks 314

7.2 The Factorial Design 317

7.3 The 2² Factorial Design 319

7.4 The 2³ Factorial Design 333

7.5 Generalized Interactions and Partial Replicates 338

7.6 Factors at Three Levels 341

7.7 The 3² Factorial Design 347

7.8 Other Factorial Designs 353

Chapter 8 Experimental Designs for Quantitative Factors

8.1 Introduction 357

8.2 Experimentation with a Single Quantitative Factor 360

8.3 Multiple Regression: The General Linear Model 376

8.4 The Multivariate Simular Response 393

8.5 A Scholium on Simular Experimentation 397

Chapter 9 The Search for Optimal System Conditions

9.1 Introduction 402

9.2 The Response Surface 403

9.3 The Search for the Optimal Response 408

9.4 The Intensive Search 427

9.5 Summary: A Guide to Response Surface Methodology 440

Chapter 10 The Simulation as a Stochastic Process

10.1 Introduction 443

10.2 Stationarity and Ergodicity 445

10.3 Removal of Trends 450

10.4 The Correlogram 459

10.5 Spectral Analysis 467

10.6 Tests for Random Number Chains 473

10.7 Comparison of Time Series from Simular Encounters. 477

10.8 Summary. 481

Chapter 11 Vistas in Simulation

11.1 Perspectives 484

11.2 The View Toward Applications. 486

11.3 A Glance at Gaming Models 488

11.4 Insights in Adaptive Models 489

11.5 Language Developments 493

11.6 Conclusion 495

Appendix **Statistical Tables** 497

Glossary 507

Bibliography 513
