

CONTENTS

PREFACE	ix
I. CONVERGENCE OF RANDOM VARIABLES	
0. Introduction	1
1. Sequences of Sets	2
2. Probability Space	6
3. Random Variables	10
4. Convergence with Probability One	14
5. Convergence in Probability	17
6. Convergence in Mean Square	19
7. Some Examples of Convergence	25
II. CONTINUITY OF RANDOM VARIABLES	
0. Introduction	30
1. Stochastic Processes	31
2. Hermitian Matrices	32
3. Real Gaussian Distributions	35
4. Complex Gaussian Processes	38
5. The Spectral Distribution Function	42
6. Continuity of Sample Functions	48
7. Mean Square Continuity	55
8. Differentiability of Random Variables	58
9. Some Miscellaneous Results	67
III. THE COMPLEX DENSITY FUNCTION	
0. Introduction	76
1. Complex Density Functions	77
2. Generating Functions	82
3. Distributions of Amplitudes and Phases	86
4. Some Nonintegral Moments and Moments of the Phases	92

IV. STOCHASTIC DIFFERENTIAL EQUATIONS	
0. Introduction	101
1. Stochastic Integrals	102
2. Generalizations and Infinite Stochastic Integrals	109
3. Linear Differential Equations	120
4. Riemann-Stieltjes Integrals	125
5. Input-Output Covariances	131
6. Linear Difference Equations	134
7. Autoregressive Processes	136
V. ESTIMATION OF SIGNALS IN ADDITIVE NOISE	
0. Introduction	139
1. An Elementary Example	139
2. Some Preliminary Results	141
3. The Estimation Problem	145
4. The Stochastic Model	146
5. Estimation of Random Signals	150
6. Estimation of Deterministic Signals	154
VI. SPECTRAL MOMENT ESTIMATION	
0. Introduction	159
1. Spectral and Covariance Approaches	160
2. The Addition of Noise	166
3. Noncoherent Statistics	169
4. Statistics of the Spectral Moment Estimators	172
5. Mathematical Justification	179
VII. HYPOTHESIS TESTING	
0. Introduction	187
1. The Likelihood Ratio Statistic	188
2. The Definite Case	192
3. The Indefinite Case	197
4. The Semidefinite Case	200
5. Some Additional Comments	203

VIII. COMPLEX LINEAR LEAST SQUARES	
0. Introduction	208
1. The Basic Idea	209
2. Differentiation with Respect to a Matrix	210
3. The Normal Equation	212
4. The Gauss-Markov Theorem	213
5. Equivalence of Least Squares and Markov Estimates	216
6. Efficiency of the Least Squares Estimate	219
7. Maximum Likelihood Estimators	221
8. Regression Curves	226
