

# Contents

## Chapter 1 Probability and statistics: the study of variability

1-1	Probability and statistics . . . . .	1
1-2	Interpretations of probability . . . . .	2
1-3	Illustrations of probabilistic models . . . . .	3
1-4	Applications of statistics . . . . .	5
1-5	The empirical study of variability . . . . .	7
1-6	Further experiments . . . . .	16
1-7	A sample space of an experiment . . . . .	23
1-8	Probabilities in a finite sample space . . . . .	27
1-9	Do probabilities grow? . . . . .	31

## Chapter 2 Permutations, combinations, and the binomial theorem

2-1	Permutations: the multiplication principle . . . . .	34
2-2	Formulas for permutations . . . . .	43
2-3	Combinations . . . . .	49
2-4	Permutations of things that are not all different . . . . .	59
2-5	The binomial theorem . . . . .	67
2-6	The many uses of $\binom{n}{r}$ . . . . .	74

## Chapter 3 Probability: equally likely outcomes

3-1	Events and sets . . . . .	77
3-2	Mutually exclusive events . . . . .	79
3-3	Independent events . . . . .	85
3-4	Conditional probability . . . . .	89
3-5	Sample spaces with many elements . . . . .	96
3-6	Random drawings . . . . .	102
3-7	Random numbers . . . . .	106
3-8	Use of tables of random digits . . . . .	107
3-9	Conclusion . . . . .	111

## Chapter 4 General theory of probability for discrete sample spaces

4-1	Unequally likely outcomes: thumbtack experiments . . . . .	113
4-2	Sample space and probability . . . . .	116

4-3	Independent events . . . . .	123
4-4	Examples of binomial experiments . . . . .	130
4-5	Extension of the binomial experiment to $n$ trials . . . . .	138
4-6	Binomial probability tables . . . . .	143
4-7	Conditional probability . . . . .	147
4-8	Using the product rule to assign probabilities in a sample space . . . . .	153
4-9	Bayes's Theorem . . . . .	158
★4-10	Discrete sample spaces that are countably infinite . . . . .	166
<b>Chapter 5 Numbers determined by experiments: random variables</b>		
5-1	Random variables and their probability functions . . . . .	171
5-2	Mathematical expectation of a random variable: population mean . . . . .	185
5-3	Mean of a function of a random variable . . . . .	195
<b>Chapter 6 Variability: measures of spread</b>		
6-1	Variability . . . . .	204
6-2	Average and variance in a sample . . . . .	219
6-3	Chebyshev's theorem for a probability distribution . . . . .	227
6-4	Chebyshev's theorem for a frequency distribution of measurements . . . . .	234
<b>Chapter 7 Joint distributions and continuous distributions</b>		
7-1	Joint probability function of two random variables . . . . .	237
7-2	Probability graphs for continuous random variables: Probabilities represented by areas . . . . .	251
7-3	Cumulative probability graphs . . . . .	254
7-4	The normal curve and the normal probability distribution . . . . .	259
<b>Chapter 8 Approximating the binomial distribution by the normal: the central limit theorem</b>		
8-1	Properties of the binomial distribution . . . . .	270
8-2	Tools for studying the limit of the binomial distribution . . . . .	275
8-3	Areas for binomial distributions tend to areas under the normal as $n$ grows: the central limit theorem for the binomial . . . . .	281
<b>Chapter 9 Some statistical applications of probability</b>		
9-1	Estimation and the testing of hypotheses . . . . .	292
9-2	Estimating $p$ , the binomial probability of success . . . . .	293
9-3	Confidence limits for $p$ with large $n$ . . . . .	298
9-4	Testing of a binomial statistical hypothesis . . . . .	302
9-5	Contingency tables; differences of $p$ 's . . . . .	315
9-6	Bayesian approach to estimation . . . . .	326
9-7	Bayesian inference with personal probabilities . . . . .	331
<b>Chapter 10 Theory of sampling. Variances of sums and of averages</b>		
10-1	Calculation of the distribution of a sum . . . . .	338
10-2	The variance of the distribution of the sum of two independent random variables . . . . .	342
10-3	Variance of the sum and of the average of several variables . . . . .	348
10-4	Dependent random variables: covariance and correlation . . . . .	359
★10-5	Sampling without replacement from a finite population . . . . .	372

**Chapter 11 Least squares, curve-fitting, and regression**

11-1	Curve-fitting . . . . .	382
11-2	The method of least squares . . . . .	387
11-3	Fitting a line through the origin . . . . .	396
★11-3	Supplement. Alternative ways to fit a line through the origin . . . . .	400
11-4	Fitting a general line . . . . .	403
11-5	Precision of estimation and the correlation coefficient . . . . .	410
11-6	Models for regression . . . . .	415

**Chapter 12 Statistical inference for measured variables**

12-1	Similarities to our previous work . . . . .	429
12-2	Confidence limits on or tests of $\mu$ , known $\sigma$ . . . . .	431
12-3	Confidence limits on or tests of $\mu$ , unknown $\sigma$ . . . . .	434
12-4	Differences between means . . . . .	442

<b>Projects for high-speed computers</b> . . . . .	449
--	-----

**Appendix 1 Summations and subscripts**

A1-1	Subscripts and the summation symbol, $\Sigma$ . . . . .	457
A1-2	Theorems about summations . . . . .	461

**Appendix 2 A theorem on independence** . . . . . 465

**Tables**

Table I-A	1000 random digits . . . . .	471
Table I-B	200 random normal deviates, $\mu = 0, \sigma = 1$ . . . . .	471
Table II	Values of $n!$ and $\log n!$ . . . . .	472
Table III	Normal curve areas . . . . .	473
Table IV	Three-place tables of the binomial distribution . . . . .	474
Table V	Probability levels for Student's $t$ -distribution . . . . .	492
Table VI	Cumulative normal distribution . . . . .	493
Table VII	Inverse of the cumulative normal distribution . . . . .	493
Chart I	Chart for obtaining 95% confidence limits on $p$ . . . . .	494

<b>Bibliography</b> . . . . .	497
-------------------------------	-----

<b>Answers to even-numbered exercises</b> . . . . .	503
---	-----

<b>Index</b> . . . . .	521
