CONTENTS

Lyapunov Methods and equations of parabolic type
J. F. G. AUCHMUTY 1

Multiple solutions of nonlinear partial differential equations
DONALD S. COHEN 15

Fading memory and functional-differential equations
BERNARD D. COLEMAN 78

Singular perturbation by a quasilinear operator
PAUL C. FIFE 87

Remarks on branching from multiple eigenvalues
W. M. GREENLEE 101

Asymptotic analysis of a class of nonlinear integral equations
RICHARD A. HANDELSMAN and W. E. OLMSTEAD 122

Remarks about bifurcation and stability of quasi-periodic solutions which bifurcate from periodic solutions of the Navier-Stokes equations
DANIEL D. JOSEPH 130

Bifurcation of periodic solutions into invariant tori: the work of Ruelle and Takens
OSCAR E. LANFORD, III 159

Ergodic theory and statistical mechanics of non-equilibrium processes
JOEL L. LEBOWITZ 193

Mathematical problems in theoretical biology
GRÉGOIRE NICOLIS 210

On predator-prey equations simulating an immune response
GEORGE H. PIMBLEY 231

Bifurcation theory for gradient systems
MICHAEL REEKEN 244

Six lectures on the transition to instability
D. H. SATTINGER 261

Groundwater flow as a singular perturbation problem and remarks about numerical methods
R. B. SIMPSON 288

Nonlinear problems in nuclear reactor analysis
I. STAKGOLD and L. E. PAYNE 298

Some nonlinear problems in statistical mechanics and biology
COLIN J. THOMPSON 308

Stability properties and periodic behavior of controlled biochemical systems
CHARLES WALTER 343
