

Contents

	Preface	v
1.	Basic Probability Concepts	1
2.	Some Initial Definitions	5
	2.1 Worked Problems	10
	2.2 Homework Problems	13
3.	Some Results Independent of Specific Distributions	14
	3.1 Multiple Scattering and the Root N Law	14
	3.2 Propagation of Errors; Errors When Changing Variables	18
	3.3 Some Useful Inequalities	20
	3.4 Worked Problems	21
	3.5 Homework Problems	25
4.	Discrete Distributions and Combinatorials	27
	4.1 Worked Problems	30
	4.2 Homework Problems	31
5.	Specific Discrete Distributions	33
	5.1 Binomial Distribution	33
	5.2 Poisson Distribution	35
	5.3 Worked Problems	37
	5.4 Homework Problems	40
6.	The Normal (or Gaussian) Distribution and Other Continuous Distributions	42
	6.1 The Normal Distribution	42
	6.2 The Chi-square Distribution	45

6.3	<i>F</i> Distribution	47
6.4	Student's Distribution	49
6.5	The Cauchy Distribution (Breit-Wigner Distribution)	49
6.6	Worked Problems	51
6.7	Homework Problems	52
7.	Generating Functions and Characteristic Functions	54
7.1	Introduction	54
7.2	Convolutions and Compound Probability	54
7.3	Generating Functions	56
7.4	Characteristic Functions	58
7.5	Homework Problems	61
8.	The Monte Carlo Method: Computer Simulation of Experiments	62
8.1	Using the Distribution Inverse	62
8.2	Method of Composition	63
8.3	Acceptance Rejection Method	65
8.4	Computer Pseudo-Random Number Generators	66
8.5	Worked Problems	69
8.6	Homework Problems	71
9.	Two Dimensional and Multi-Dimensional Distributions	75
9.1	Introduction	75
9.2	Two Dimensional Distributions	75
9.3	Multi-Dimensional Distributions	82
9.4	Theorems on Sums of Squares	86
9.5	Homework Problems	88
10.	The Central Limit Theorem	90
10.1	Introduction; Lindeborg Criterion	90
10.2	Failures of the Central Limit Theorem	93

10.3	Khintchine's Law of the Iterated Logarithm	97
10.4	Worked Problems	99
10.5	Homework Problems	101
11.	Inverse Probability; Confidence Limits	102
11.1	Bayes' Theorem	102
11.2	The Problem of <i>A Priori</i> Probability	103
11.3	Confidence Intervals and Their Interpretation	105
11.4	When Is a Signal Significant?	111
11.5	Worked Problems	113
11.6	Homework Problems	117
12.	Methods for Estimating Parameters. Least Squares and Maximum Likelihood	118
12.1	Method of Least Squares (Regression Analysis)	118
12.2	Maximum Likelihood Method	120
12.3	Putting Together Several Probability Estimates	128
12.4	Worked Problems	130
12.5	Homework Problems	132
13.	Curve Fitting	135
13.1	The Maximum Likelihood Method for Multiparameter Problems	135
13.2	Regression Analysis with Non-constant Variance	138
13.3	The Regularization Method	145
13.4	Non-linear Parameters	147
13.5	Robustness of Estimates	153
13.6	Worked Problems	154
13.7	Homework Problems	157
14.	Bartlett <i>S</i> Function; Estimating Likelihood Ratios Needed for an Experiment	161
14.1	Introduction	161
14.2	The Jackknife	161

14.3	Making the Distribution Function of the Estimate Close to Normal; the Bartlett S Function	162
14.4	Likelihood Ratio	168
14.5	Estimating in Advance the Number of Events Needed for an Experiment	168
14.6	Homework Problems	172
15.	Interpolating Functions and Unfolding Problems	173
15.1	Interpolating Functions	173
15.2	Spline Functions	173
15.3	B-Splines	175
15.4	Unfolding Data	176
15.5	Homework Problems	178
16.	Fitting Data with Correlations and Constraints	180
16.1	Introduction	180
16.2	General Equations for Minimization	182
16.3	Iterations and Correlation Matrices	183
17.	Beyond Maximum Likelihood and Least Squares; Robust Methods	189
17.1	Introduction	189
17.2	Tests on the Distribution Function	189
17.3	Tests Based on the Binomial Distribution	196
17.4	Tests Based on the Distributions of Deviations in Individual Bins of a Histogram	197
17.5	Homework Problems	199
	References	201
	Index	204
