Contents

Introduction vii

I. Stochastic Programming

Parameters 1
Feasibility and Convexity 2
Kall's Theorem 5
Optimality and Convexity 8
Decision Regions for Optimality 12
Approximations 14
Inequalities 17
Probability Distributions 18

II. Decision Problems

A Decision Problem 23
The *Active* Approach 24
Two-Stage Programming under Uncertainty 27
The Complete Problem 29
Examples 35
Discrete Values of b_t 42
The General Case, b Stochastic 44
Feasibility 45
Optimality 48
The General Case, A and b Stochastic 51
The General Case, b, A, and B Stochastic 54
Inequalities 56
Appendix 71

III. Chance Constraints

Quantile Rules 78
Joint Probability 88
Randomized Decisions 90
P-Model 92
Nonzero Order Rules 98
Conditional Quantiles 101

Appendix I

Linear Programming and Duality 105

Appendix II

Applications of Stochastic (Probabilistic) Programming in Various Fields (References) 115
