Radioheliography

N. R. LABRUM, D. J. MCLEAN, AND J. P. WILD

DIVISION OF RADIOPHYSICS, CSIRO
SYDNEY, AUSTRALIA*

I. Introduction 1
II. The Sun and Its Radio Image 2
III. The Principles of Radioheliography 4
A. General Requirements 4
B. The Geometry of Spaced Arrays 6
C. Processing the Received Signals 10
IV. The Evolution of the Radioheliograph 13
V. The Culgoora Radioheliograph 15
A. General Description 15
B. Array Beam Formation 16
C. Picture Formation 20
D. Array Beam Steering 21
E. The Receiving System 22
F. The Phase-Control System 23
VI. Culgoora Data Processing 27
A. Off-Line Processing of Culgoora Data 28
B. On-Line Data Handling 38
VII. Solar Radio Astronomy with the Radioheliograph 44
Radio Bursts from the Corona 45
VIII. Future Developments in Radioheliography 51

Pulsar Signal Processing

TIMOTHY H. HANKINS* AND BARNEY J. RICKETT

DEPARTMENT OF APPLIED PHYSICS AND INFORMATION SCIENCE
UNIVERSITY OF CALIFORNIA AT SAN DIEGO
LA JOLLA, CALIFORNIA

I. Introduction 56
II. Pulsar Searches 57
A. The Fast Folding Algorithm (FFA) Method 58
B. The Fast Fourier Transform (FFT) Method 60
C. Comparison of Digital Period Search Techniques 61
D. Digital Dispersion Search Techniques 62
III. Dispersion 64
A. Transfer Function of the Interstellar Medium 64
B. The Effect of Dispersion on Time Resolution 67
C. Dispersion Removal 69
D. Measurement of Dispersion 77
IV. Sampling, Resolution, and Average Profiles 81
A. Instrumental Considerations 81
B. Average Profiles 83
V. Polarization 84
A. Polarimeter Calibration 85
B. Polarization Observations and Displays 86
VI. Intensity Variations with Time 87
A. Intensity Variations and Their Statistics 87
B. Correlation Functions for Variations within a Pulse Period . . . 93
C. Pulse-to-Pulse Correlation 96
D. Pulse Energy Fluctuations 97
E. Fluctuation Spectra versus Longitude 98
F. Intensity Distribution Functions 102
G. Estimation Error in Mean Profiles 103
VII. Intensity Variations with Frequency 104
A. Frequency Dependence of Pulsar Radiation 104
B. Frequency and Time Resolution 106
C. Narrowband Spectral Variations 107
VIII. Interstellar Scattering and Scintillation 109
A. Fluctuations Over Time and Frequency 109
B. Pulse Broadening 112
C. Multiple-Site Observations 116

* Present address: Arecibo Observatory, Box 995, Arecibo, Puerto Rico 00612.

IX. Timing Measurements 118
A. Time-of-Arrival Observations 118
B. Errors in Arrival Time 119
C. Barycentric Arrival Times 121
D. Model Fitting 122

Aperture Synthesis

W. N. BROUW*

NETHERLANDS FOUNDATION FOR RADIO ASTRONOMY† AND
LEIDEN OBSERVATORY
LEIDEN, THE NETHERLANDS

I. Introduction 131
II. Aperture Synthesis 132
A. Aperture Synthesis Theory 133
B. Principal Aperture Synthesis Formulas 136
III. Earth Rotation Aperture Synthesis 139
A. Theory of Rotational Synthesis 139
B. Delays 141
C. Some Practical Limitations 143
D. Sensitivity 154
E. Single Beam vs. Aperture Synthesis Telescope 158
IV. Data Processing 160
A. Telescope Steering and Data Collection 160
B. Calibration 161
C. Correction 162
D. Transformation of Correlation Function into Brightness Distribution . 163
E. Map Handling 169
V. Conclusion 173
