

Preface	xi
PART 1 FUNDAMENTALS OF FINITE-DIFFERENCE METHODS	
1 INTRODUCTION	3
1-1 General Remarks	3
1-2 Comparison of Experimental, Theoretical, and Numerical Approaches	5
1-3 Historical Perspective	9
2 PARTIAL DIFFERENTIAL EQUATIONS	13
2-1 Introduction	13
2-2 Physical Classification	13
2-3 Mathematical Classification	19
2-4 The Well-Posed Problem	29
2-5 Systems of Equations	31
2-6 Other Differential Equations of Interest Problems	35 36
3 BASICS OF FINITE-DIFFERENCE METHODS	39
3-1 Introduction	39
3-2 Finite Differences	39
3-3 Difference Representation of Partial Differential Equations	46
3-4 Further Examples of Methods for Obtaining Finite-Difference Equations	53
3-5 Introduction to the Use of Irregular Meshes	66
3-6 Stability Considerations Problems	70 83
	vii

4	APPLICATION OF FINITE-DIFFERENCE METHODS TO SELECTED MODEL EQUATIONS	87
4-1	Wave Equation	87
4-2	Heat Equation	108
4-3	Laplace's Equation	121
4-4	Burgers' Equation (Inviscid)	138
4-5	Burgers' Equation (Viscous)	154
4-6	Concluding Remarks	169
	Problems	169
PART 2	APPLICATION OF FINITE-DIFFERENCE METHODS TO THE EQUATIONS OF FLUID MECHANICS AND HEAT TRANSFER	
5	GOVERNING EQUATIONS OF FLUID MECHANICS AND HEAT TRANSFER	181
5-1	Fundamental Equations	181
5-2	Reynolds Equations for Turbulent Flows	197
5-3	The Boundary-Layer Equations	208
5-4	Introduction to Turbulence Modeling	221
5-5	Euler Equations	235
5-6	Transformation of Governing Equations	247
	Problems	255
6	NUMERICAL METHODS FOR INVISCID FLOW EQUATIONS	259
6-1	Introduction	259
6-2	The Method of Characteristics	260
6-3	Shock-Capturing Methods	272
6-4	The SCM Method	288
6-5	Methods for Solving the Potential Equation	302
6-6	The Transonic Small Disturbance Equation	318
6-7	Methods for Solving Laplace's Equation	321
	Problems	327
7	NUMERICAL METHODS FOR BOUNDARY-LAYER TYPE EQUATIONS	329
7-1	Introduction	329
7-2	Brief Comparison of Prediction Methods	330
7-3	Finite-Difference Methods for Two-dimensional or Axisymmetric Steady External Flows	331
7-4	Inverse Methods, Separated Flows, and Viscous-Inviscid Interaction	363
7-5	Methods for Internal Flows	380
7-6	Application to Free-Shear Flows	391
7-7	Three-dimensional Boundary Layers	394

7-8	Unsteady Boundary Layers	412
	Problems	413
8	NUMERICAL METHODS FOR THE “PARABOLIZED” NAVIER-STOKES EQUATIONS	417
8-1	Introduction	417
8-2	Thin-Layer Navier-Stokes Equations	421
8-3	“Parabolized” Navier-Stokes Equations	424
8-4	Parabolized and Partially Parabolized Navier-Stokes Procedures for Subsonic Flows	451
8-5	Viscous Shock-Layer Equations	468
8-6	“Conical” Navier-Stokes Equations	472
	Problems	475
9	NUMERICAL METHODS FOR THE NAVIER-STOKES EQUATIONS	479
9-1	Introduction	479
9-2	Compressible N-S Equations	479
9-3	Incompressible N-S Equations	502
	Problems	517
10	GRID GENERATION	519
10-1	Introduction	519
10-2	Algebraic Methods	521
10-3	Differential Equation Methods	527
10-4	Adaptive Grids	532
10-5	Other Considerations	545
	Problems	546
Appendix A	Subroutine for Solving a Tridiagonal System of Equations	549
Appendix B	Subroutines for Solving Block Tridiagonal Systems of Equations	551
Appendix C	The Modified Strongly Implicit Procedure	559
	Nomenclature	565
	References	571
	Index	591
