

# Contents

Introduction	1
Chapter 1. Linear processes in weak dispersive and unstable media	5
Chapter 2. Finite-amplitude waves in weak dispersive and unstable media	23
2.1. One-dimensional solitons	23
2.2. Auto-oscillations in an anisotropic plasma	43
2.3. Waves on the surface of viscous films	59
Chapter 3. Non-linear and shock waves in a rarefied plasma (gas-dynamic models)	65
Chapter 4. Shock waves in a rarefied plasma (hybrid models)	113
Chapter 5. Two-dimensional problems of magnetogas-dynamics	133
5.1. Bow shock waves	133
5.2. Reconnection processes	147
Chapter 6. Unsteady gas-dynamic processes in neutron stars	157
6.1. Equation of state	158
6.2. Calculations of neutron star models in the Newtonian approach	160
6.3. Dynamics of neutron stars taking into account the general relativity effects	167
