Foreword 11

Introduction 15

CHAPTER 1 — PROPERTIES OF MATRICES

1.1	Assumptions, Conventions; Transposition and Related Definitions	17
1.2	Symmetric and Skew-symmetric Matrices	18
1.3	Reversal of Order on Transposition	18
1.4	Partitioning of Matrices.	19
1.5	Singular Matrices, Degeneracy and Rank	20
1.6	Factorisation of Matrices	21
1.7	Adjugate and Reciprocal Matrices	22
1.8	Powers of Matrices, Polynomials and Series	24
1.9	Special Types of Matrix.	25
1.10	Variable Matrices, Linear Substitutions and Algebraic Equations	30
1.11	Bilinear and Quadratic Forms	32
1.12	Equivalent Matrices and Canonical Forms	34
1.13	Lambda-matrices	36
1.14	Adjugate Lambda-matrices.	37
1.15	Equivalent Lambda-matrices	38
1.16	The Characteristic Matrix and its Eigenvalues	38

1.17	The Cayley–Hamilton Theorem	42
1.18	Sylvester’s Expansion Theorem	43
1.19	Orthogonality and Bi-orthogonality of the Modal Matrix	45
1.20	Canonical Forms Obtained by Similar Transformation	47
1.21	Some Remarks on Equal Eigenvalues	50
1.22	Some Miscellaneous Theorems	59

CHAPTER 2 — SOME NUMERICAL METHODS

2.1	Introduction	80
I: RECIPROCATION; LINEAR ALGEBRAIC EQUATIONS		
2.2	Direct Methods for Matrix Inversion	81
2.3	Iterative Methods	96
2.4	Special Types of Matrix	104
2.5	Linear Algebraic Equations	110
II: EIGENVALUES AND VECTORS		
2.6	The Characteristic Equation	120
2.7	Power Methods	124
2.8	Transformation Methods	154
2.9	Matrix Pencils	168
2.10	Improvement of the Accuracy of Eigenvalues and Vectors	184

CHAPTER 3 — NEIGHBOUR SYSTEMS AND ALLIED PROBLEMS

3.1	Introduction	196
3.2	The C–J Problem: Background Considerations	197
3.3	The C–J Solution	199
3.4	A Simple Regression Solution	213
3.5	Conjugate Complex Eigenvalues	217
3.6	Adjacent and Confluent Eigenvalues	220
3.7	Neighbour Systems	235
3.8	Application of Limited Information	237
3.9	Submatrix Iteration	240

CHAPTER 4 — ENERGY PRINCIPLES I: GENERALISED COORDINATES, ENERGY EXPRESSIONS AND VIRTUAL WORK

4.1	Introduction	243
4.2	Reference Frames	244
4.3	Degrees of Freedom and Generalised Coordinates	245
4.4	Kinetic Energy of a System of Particles: Dynamic Representation of Rigid Body Elements by Holonomically Constrained Particles	251

4.5	The Principle of Virtual Work	258
4.6	Position-Dependent Forces: Potential Energy	263
4.7	Semi-Rigidity (or Quasi-Elasticity)	272
4.8	A Paradox Concerning Independence of Coordinates and Velocities.	274
4.9	Concluding Comments	275

**CHAPTER 5 — ENERGY PRINCIPLES II: HAMILTON’S PRINCIPLE,
LAGRANGE’S EQUATIONS AND THE ELEMENTS OF
LINEAR DYNAMICS**

5.1	Hamilton’s Principle	277
5.2	Lagrange’s Equations.	286
5.3	Lagrange’s Equations for Linear Dynamical Systems	297
5.4	Linear Conservative Systems in Structural Mechanics: Natural Frequencies and Normal Modes	313
5.5	Structural Damping: Linear Modelling	326
5.6	The Whirling of Shafts	333

CHAPTER 6 — LINEAR SYSTEMS: RESPONSE AND STABILITY

6.1	Solution of a Set of First-Order Linear Ordinary Differential Equations with Constant Coefficients	341
6.2	Reduction of a Set of Linear Ordinary Differential Equations of Any Order to First-Order Form	358
6.3	Frequency Response of Dynamical Systems	361
6.4	Stability of Linear Systems	365

CHAPTER 7 — LINEAR DYNAMICS OF CONTINUOUS SYSTEMS

7.1	Introduction	395
7.2	Philosophy of the Semi-Rigid Method: Necessary Requirements for the Assumed Modes	396
7.3	Natural Frequency and Mode Shape Estimates for Linear Conservative Structural Systems: the Rayleigh–Ritz (R–R) Method	407

I: ONE-DIMENSIONAL SYSTEMS

7.4	One-Dimensional Systems	412
7.5	Bars, Rods and Strings	412
7.6	The Euler–Bernoulli Beam	430
7.7	The Timoshenko Beam	441
7.8	One-Dimensional Systems (Continued): Combined Steady Actions and Combined Motions	444

II: SYSTEMS OF MORE THAN ONE DIMENSION

7.9	More Than One Dimension	463
7.10	A Note on Modal Analysis Methods Based on the Partial Differential Equations of Motion	476

CHAPTER 8 — THE DYNAMICAL ANALYSIS OF COMPOSITE SYSTEMS

8.1	Introduction	482
8.2	Assembly Technique for Dynamic Stiffnesses and Finite Elements	482
8.3	Preparation for Subsystem Connection	491
8.4	Evaluation of Natural Frequencies of Skeletal Structures: the Wittrick–Williams Algorithm	497
8.5	Eigenvalue Economisers: Guyan Reduction	505
8.6	Kron’s Eigenvalue Method	509
8.7	Proof of the Wittrick–Williams Algorithm	528
8.8	Proof of Simpson’s Counting Algorithm	530
	Bibliography of Major Texts	532
	Index	535
