

Contents

Preface	xi
1. Introduction	1
1.1 “Historical” Background	1
1.2 Numerical Methods	1
1.3 Optimization Techniques	4
1.4 Computer Philosophy Used in the Text	4
1.5 Error Analysis	6
<i>Problems</i>	11
2. Solution of Linear Equations	15
2.1 Introduction	15
2.2 Cramer’s Rule	16
2.3 The Matrix Solution	17
2.4 Gauss Elimination	19
2.5 Crout Reduction	29
2.6 Suggested Reading in Related Topics	36
<i>Problems</i>	38
3. Solutions for a Nonlinear Equation	43
3.1 Introduction	43
3.2 Iterative Procedures	44
3.3 Newton’s Method	45
3.4 Quadratic Interpolation and Muller’s Method	50
3.5 Bairstow’s Method	57
3.6 Suggested Reading in Related Topics	64
<i>Problems</i>	67
4. Interpolation	71
4.1 Introduction	71
4.2 A Unique Solution	72

4.3	The Normalized Variable	73
4.4	Some Useful Operators, Δ and E	74
4.5	Difference Tables	77
4.6	The Newton-Gregory Polynomial	78
4.7	The Lagrange Polynomial	82
4.8	Inverse Interpolation	85
4.9	Introduction to Least-Squares Data Fitting	86
4.10	Spline Functions	89
4.11	Fourier Series Applied to Interpolation	91
4.12	Suggested Reading in Related Topics	97
	<i>Problems</i>	100
5.	Differentiation	103
5.1	Introduction	103
5.2	Method of Interpolating Polynomials	104
5.3	Method of Undetermined Coefficients	107
5.4	Application of Interpolating Programs	111
	<i>Problems</i>	113
6.	Integration	115
6.1	Introduction	115
6.2	Trapezoidal Rule	116
6.3	Simpson's Rules	121
6.4	Examples	125
6.5	Romberg Prediction	127
6.6	Method of Undetermined Coefficients	129
6.7	Predictor and Corrector Equations	131
6.8	Gaussian Quadrature	134
6.9	Suggested Reading in Related Topics	137
	<i>Problems</i>	139
7.	Solution of Differential Equations	143
7.1	Introduction	143
7.2	Classification of Differential Equations	144
7.3	Euler Method	144
7.4	Stability Analysis	147
7.5	Modified Euler Method	151
7.6	Runge-Kutta Method	153

7.7	Adams Method and Automatic Error Control	156
7.8	Solution of Higher-Order Differential Equations	163
7.9	Boundary-Value Problems	169
7.10	Suggested Reading in Related Topics <i>Problems</i>	172 174
8.	Introduction to Optimization Theory	177
8.1	Preliminary Remarks	177
8.2	Formulation of Optimization Problems	179
8.3	Overview of Various Optimization Techniques	181
8.4	The Simplex Optimization Technique	183
8.5	Applications of Simplex	190
8.6	Test Functions	195
	<i>Problems</i>	202
9.	Gradient Techniques	205
9.1	Introduction	205
9.2	Quadratic Interpolation for a Specific Direction	206
9.3	The Gradient	208
9.4	The Steepest-Descent Optimization Technique	211
9.5	Applications of Steepest Descent	220
9.6	The Fletcher-Powell Optimization Technique	226
	<i>Problems</i>	233
10.	The Least-pth Optimization Technique	237
10.1	Introduction	237
10.2	The Least-Squares Algorithm	238
10.3	The Least- p th Algorithm	242
10.4	A Least- p th Program	244
10.5	Application to Least-Squares Data Fitting	252
10.6	Chebyshev Approximations	256
	<i>Problems</i>	263
11.	Constrained Optimization Problems	265
11.1	Introduction	265
11.2	Active Constraints versus Inactive Constraints	266
11.3	Transformations	269

11.4 Penalty Functions	276
11.5 Concluding Comments about Optimization Techniques	280
<i>Problems</i>	282
References	285
Answers to Selected Problems	287
Index	291
