

Table of Contents

CHAPTER 1	
Introduction	1
1.1 General Considerations and Some Examples	1
1.1.1 Statement of the Problem and Some Examples	1
1.1.2 The Classical Approach	3
1.1.3 Direct Methods	4
1.2 The Direct Methods	6
1.2.1 Preliminaries	6
1.2.2 Abstract Results and the Scalar Case	6
1.2.3 The Vectorial Case	9
1.2.4 Nonconvex Integrands	11
1.2.5 Applications to Nonlinear Elasticity	13
CHAPTER 2	
Preliminaries	15
2.1 L^p and Sobolev Spaces	15
2.1.1 Weak Convergence in L^p	15
2.1.2 Sobolev Spaces	24
2.2 Convex Analysis	27
2.2.1 Convex Functions	27
2.2.2 Duality and Hahn-Banach Theorem	34
2.2.3 Carathéodory Theorem	42

CHAPTER 3

General Setting and the Scalar Case	45
3.0 Introduction	45
3.1 Abstract Results	47
3.1.1 Weak Lower Semicontinuous Functionals and Existence Theorems	47
3.1.2 Convex Functionals	49
3.1.3 First-Order Necessary Condition	50
3.2 Convex Functionals	51
3.2.1 Necessary Condition	52
3.2.2 Sufficient Condition	52
3.3 Weak Lower Semicontinuity, Weak Continuity and Invariant Integrals	66
3.3.1 Weak Lower Semicontinuity	66
3.3.2 Weak Continuity and Invariant Integrals	78
3.4 Existence Theorems and Euler Equations	82
3.4.1 Existence Theorems and Regularity Results	82
3.4.2 Euler Equations	86
3.4.3 Lavrentiev Phenomenon	92

CHAPTER 4

The Vectorial Case	97
4.0 Introduction	97
4.1 Polyconvexity, Quasiconvexity and Rank One Convexity	98
4.1.1 Definitions and Properties	98
4.1.2 Examples	117
4.2 Weak Continuity, Weak Lower Semicontinuity and Existence Theorems	155
4.2.1 Weak Lower Semicontinuity	156
4.2.2 Weak Continuity	170
4.2.3 Existence Theorems	180
4.3 Appendix: Some Elementary Properties of Determinants	186
4.3.1 Definitions and Properties of Determinants	187
4.3.2 Some Properties of Jacobians	193

CHAPTER 5

Non-Convex Integrands	197
5.0 Introduction	197
5.1 Convex, Polyconvex, Quasiconvex, Rank One Convex Envelopes	198
5.1.1 Definitions and Properties	199

5.1.2 Examples	213
5.2 Relaxation Theorems	228
5.2.1 Relaxation Theorems	228
5.2.2 Existence and Non-Existence of Solutions	240
 Appendix: Applications	 251
A.0 Introduction	251
A.1 Existence and Uniqueness Theorems in Nonlinear Elasticity	252
A.1.1 Setting of the Problem	252
A.1.2 Existence Theorems	258
A.1.3 Unicity of Classical Solutions of Equilibrium Equations	260
A.2 Relaxation Theorems in Elasticity and Optimal Design	264
A.2.1 Antiplane Shear Problem in Elasticity	264
A.2.2 A Problem of Equilibrium of Gases	267
A.2.3 Equilibrium of Elastic Crystals	276
A.2.4 Relaxation and Optimal Design	281
 Bibliography	 293
Index	307
