

CONTENTS

Foreword	xi
Preface	xiii
Notation	1
Chapter 1. An Introduction to Optimization Theory	6
1. Convex Sets and Convex Functions	6
2. Differentiability of Convex Functions	16
3. Necessary and Sufficient Conditions of a Local Extremum of Functions of Many Variables	27
4. Necessary and Sufficient Conditions for a Minimum of Functions on Sets	34
5. Properties of Minimax Problems	40
6. Conditions for a Minimum in Nonlinear Programming Problems Without Differentiability	60
7. Conditions for a Minimum in Nonlinear Programming Problems With Differentiability	75
8. Necessary Conditions for a Minimum in Optimal Control Problems	94
Chapter 2. Convergence Theorems and Their Application to the Investigation of Numerical Methods	107
1. Stability of the First-Order Approximation	107
2. The Method of Lyapunov Functions	115
3. Theorems on Convergence of Iterative Processes	129
4. Convergence of Processes Generated by Multivalued Mappings	145
5. Methods for Solving Systems of Nonlinear Equations	152
6. Numerical Methods for Finding a Minimax	177

Chapter 3. The Penalty-Function Method	196
1. The Exterior Penalty-Function Method	197
2. Estimation of Accuracy	215
3. The Cost-Function Parametrization Method	234
4. The Interior Penalty-Function Method	245
5. The Linearization Method	255
Chapter 4. Numerical Methods for Solving Nonlinear Programming Problems Using Modified Lagrangians	264
1. The Simplest Modification of the Lagrangian	265
2. Modified Lagrangians	279
3. Proof of Convergence for the Simple Iteration Method	286
4. Solution of Convex Programming Problems	301
5. Reduction to a Maximin Problem	310
6. Reduction to a Minimax Problem	321
Chapter 5. Relaxation Methods for Solving Nonlinear Programming Problems	330
1. Application of the Reduced Gradient Method to Solving Problems With Equality-Type Constraints	330
2. A Generalization of the Reduced Gradient Method	336
3. A Discrete Version of the Reduced Gradient Method	351
4. The Conditional Gradient Method	355
5. The Gradient Projection Method	361
Chapter 6. Numerical Methods for Solving Optimal Control Problems	364
1. Basic Computational Formulas	367
2. Necessary and Sufficient Conditions for A Minimum	383

3. Numerical Methods Based on the Reduction to Nonlinear Programming Problems	388
4. Discrete Minimum Principles	398
5. Numerical Methods Based on Discrete Minimum Principle	418
6. Some Generalizations	423
7. Examples of Numerical Computations	434
8. An Application to Differential Games	455
 Chapter 7. Search for Global Solutions	 465
1. The General Notion of Coverings	466
2. Covering a Parallelepiped	474
3. Solution of Nonlinear Programming Problems	491
4. Solution of Systems of Algebraic Equations	502
5. Solution of Minimax Problems	505
6. Solution of Multicriteria Problems	509
 Appendix I. Differentiability	 517
Appendix II. Some Properties of Matrices	522
Appendix III. Some Properties of Mappings	530
 Notes and Comments	 533
References	539
Index	554
List of Forthcoming Publications	559
Transliteration Table	561
