

TABLE OF CONTENTS

<i>Chapter 1 : Augmented Lagrangian methods in quadratic programming.</i> M.Fortin, R.Glowinski.	1
1. <i>Principles of the method</i>	1
2. <i>A first algorithm for saddle-point calculation</i>	3
2.1 <i>Description of the algorithm</i>	3
2.2 <i>Convergence results</i>	4
2.3 <i>Interpretation of algorithm (2.1)-(2.3). Rate of convergence if $\rho_n = \rho$ and choice of r</i>	7
3. <i>Variable step-length algorithms. Conjugate gradient method</i>	18
3.1 <i>General notes</i>	18
3.2 <i>Application to the minimisation of J_r^*</i>	21
4. <i>On certain variants of the methods of Section 2: Introduction of a relaxation parameter; method of Arrow - Hurwicz</i>	26
4.1 <i>Synopsis</i>	26
4.2 <i>Study of algorithm (4.1)-(4.4)</i>	27
4.3 <i>Study of algorithm (4.6)-(4.8)</i>	34
4.3.1 <i>General notes</i>	34
4.3.2 <i>Reduction of (4.6)-(4.8) to the discrete form of a second-order differential system</i>	34
4.3.3 <i>Convergence of algorithm (4.6)-(4.8)</i>	35
5. <i>Miscellaneous remarks and discussion</i>	42
<i>Chapter 2 : Application to the Stokes and Navier-Stokes equations.</i> M.Fortin, F.Thomasset.	47
1. <i>Introduction</i>	47
1.1 <i>Motivation</i>	47

1.2 Statement of the problem	47
1.3 Stokes problem and quadratic programming	49
2. <i>Discretisation of the Stokes problem</i>	52
3. <i>Algorithms and discussion of results</i>	57
3.1 Explicit formulation of the algorithms	57
3.2 Results and discussion	62
3.2.1 Fixed-step Uzawa algorithms	62
3.2.2 Effect of the incomplete solution of (3.3) ...	66
3.2.3 Variable steplength and conjugate-gradient methods	70
3.2.4 Algorithm with relaxation parameter	71
3.2.5 Algorithms of Arrow - Hurwicz type	73
3.2.6 Conclusions	74
4. <i>Navier-Stokes equations, steady-state nonlinear case</i>	75
4.1 Statement of the problem	75
4.2 Basic algorithm	78
5. <i>Variants and approximations of the basic algorithm of Section 4</i>	83
5.1 Variants of Uzawa type	84
5.2 Variants of Arrow - Hurwicz type	86
5.3 Numerical results	87
6. <i>Navier-Stokes equations. Time-dependent case</i>	88
6.1 Statement of the problem	88
6.2 Solution algorithm	91
7. <i>General discussion on Chapter II</i>	95
<i>Chapter 3 : On decomposition-coordination methods using an augmented Lagrangian. M.Fortin, R.Glowinski. ..</i>	97
1. <i>Introduction</i>	97
1.1 Motivation. Examples	97
1.2 Principle of the method	100
2. <i>Investigation of problem (P) and of the saddle-points of \mathcal{L} and \mathcal{L}_r</i>	103
2.1 Existence and uniqueness properties for problem (P) .	103
2.2 Properties of the saddle-points of \mathcal{L} and of \mathcal{L}_r ..	104
2.3 Relations with perturbation theory in Convex Analysis	106

3.	<i>Description of the algorithms</i>	108
3.1	First algorithm (ALG1)	108
3.2	Second algorithm (ALG2)	110
3.3	Application to the examples of Section 1	111
4.	<i>Convergence of ALG1</i>	113
4.1	General case	113
4.2	The finite-dimensional case	117
4.3	On the choice of r and of $\{\rho_n\}_n$	119
5.	<i>Convergence of ALG2</i>	122
5.1	General case	122
5.2	Finite-dimensional case	126
5.3	Discussion. Choice of ρ and of r	126
6.	<i>Application to some nonlinear problems</i>	127
6.1	Introduction	127
6.2	Case of the examples of Section 1.1 (Flow of a Bingham fluid and elastoplastic torsion)	128
6.3	A nonlinear Dirichlet problem	128
6.4	Application to the solution of mildly nonlinear systems and relationship with alternating direction methods	131
7.	<i>Application to nonlinear programming problems</i>	135
7.1	An augmented Lagrangian in the case of inequality constraints	135
7.2	Minimisation of a functional over an intersection of convex sets	137
7.2.1	Statement of the problem	137
7.2.2	Solution of the problem by ALG1 and ALG2	139
7.3	Application to the solution of the Weber problem	141
7.3.1	Statement of the problem	141
7.3.2	Introduction of an augmented Lagrangian for the solution of problem (7.32)	142
7.3.3	Application of ALG2 to the solution of (7.32).	142
7.3.4	Numerical applications	143
8.	<i>General discussion on Chapter III</i>	145

*Chapter 4 : Numerical solution of mildly nonlinear problems
by augmented Lagrangian methods. M.Fortin,
R.Glowinski, T.F.Chan.* 147

1.	<i>Introduction</i>	147
2.	<i>A class of mildly nonlinear elliptic problems</i>	148
2.1	Formulation of the problem	148
2.2	Approximation of problem (2.5), (2.6) by finite element methods	150
3.	<i>Augmented Lagrangian and decomposition of the problem (2.5), (2.6)</i>	153
3.1	Construction of the augmented Lagrangian. (I) Continuous case	153
3.2	Construction of the augmented Lagrangian. (II) The discrete case	154
4.	<i>Algorithms for solution of the approximate problem (2.13). Discussion</i>	157
5.	<i>Numerical experiments</i>	161
5.1	Formulation of a model problem. General notes	161
5.2	Comments on the implementation and the convergence of ALG1 and ALG2	162
5.3	Discussion on the choice of the parameters r and ρ	165
6.	<i>Some remarks on hybrid methods</i>	166
7.	<i>General discussion on Chapter IV</i>	170

*Chapter 5 : Application to the solution of strongly
nonlinear second-order boundary value problems.
M.Fortin, R.Glowinski, A.Marrocco.*

1.	<i>Introduction</i>	171
2.	<i>General framework of the problems in Chapter V</i>	171
3.	<i>A class of nonlinear Dirichlet problems</i>	173
3.1	Formulation of the problems. Augmented Lagrangians .	173
3.1.1	The continuous case	173
3.1.2	The approximate problems	174
3.2	The basic algorithm and its convergence properties ..	176
3.3	Numerical experiments	181
3.4	Continuity constraints on the gradient; Interior penalty methods	185
4.	<i>A magneto-static problem</i>	186
4.1	Formulation of the problem	186

4.2 Formulation using an augmented Lagrangian	188
4.3 Numerical experiments	190
5. Calculation of subsonic and transonic potential flows of compressible ideal fluids	193
5.1 Formulation of the problem	194
5.2 Formulation via an augmented Lagrangian. Solution algorithms	196
6. Further applications	199
6.1 Flow of a viscoplastic Bingham fluid in a cylindrical duct	199
6.1.1 Formulation of the problem	199
6.1.2 Solution by augmented Lagrangian methods	200
6.1.3 Numerical results	201
6.2 Elastoplastic torsion of a cylindrical bar	203
6.2.1 Formulation of the problem	203
6.2.2 Solution of (6.13), (6.14) by augmented Lagrangian methods	204
6.2.3 Numerical results	206
6.3 Application to the solution of the minimal surfaces problem	207
6.3.1 Formulation of the problem	207
6.3.2 Solution of problem (6.21) by augmented Lagrangian algorithms	208
6.3.3 Numerical results	208
7. Discussion on Chapter V	210
<i>Chapter 6 : Application of algorithm ALG2 to a two dimensional elastoplasticity problem.</i> <i>B. Mercier.</i>	217
<i>Introduction</i>	217
1. <i>The continuous problem</i>	217
2. <i>The problem (P)</i>	219
3. <i>Approximation by finite elements</i>	220
4. <i>Application of algorithm ALG2</i>	222
5. <i>Convergence of algorithm ALG2</i>	224
6. <i>Numerical application</i>	225
6.1 <i>Description of the mechanical problem</i>	225

6.2	Choice of constants	227
6.3	Gradient method	227
6.4	Conjugate gradient method	228
6.5	Choice of the parameters for algorithm ALG2	229
7.	<i>Discussion</i>	231
<i>Chapter 7 : Application to the numerical solution of the two dimensional flow of incompressible viscoplastic fluids. D.Begis, R.Glowinski.</i>		233
1.	<i>General notes. Synopsis.</i>	233
2.	<i>Formulation of Bingham flows using the velocity and the pressure</i>	233
3.	<i>Formulation of Bingham flows using a stream function</i>	235
4.	<i>Approximation of the steady-state problem</i>	237
4.1	Synopsis. Formulation of the steady-state problem ...	237
4.2	Approximation of (4.1),(4.2) by a mixed finite element method	237
4.3	Solvability of problem (4.11)	239
4.4	Convergence of the approximate solutions	239
4.5	Approximation using numerical integration	240
5.	<i>Approximation of the evolution problem (3.7)</i>	241
5.1	Semi-discretisation with respect to time	241
5.2	Complete discretisation of (3.7)	242
6.	<i>Solution of (4.1),(5.2) by augmented Lagrangian methods</i> ...	243
6.1	Synopsis	243
6.2	The model problem. Introduction of an augmented Lagrangian	243
6.3	Application of ALG1 to seeking a saddle point of \mathcal{L}_r ..	245
6.4	On variants of algorithm (6.6)-(6.8)	246
7.	<i>Numerical experiments</i>	248
7.1	Formulation of the test problem	248
7.2	Numerical results	249
<i>Chapter 8 : Application to the solution of finite nonlinear elasticity problems. J.F.Bourgat, R.Glowinski, P.Le Tallec.</i>		257
1.	<i>General notes. Synopsis.</i>	257

2.	<i>Decomposition of variational problems. Associated algorithms</i>	258
2.1	A family of variational problems	258
2.2	A decomposition principle	259
2.3	An augmented Lagrangian associated with (π)	260
2.4	A first algorithm for solving (P)	261
2.5	A second algorithm for solving (P)	262
2.6	Remarks on the choice of ρ and r	263
2.7	Relations with alternating direction methods. Further discussion	264
2.7.1	Relations between algorithms $(2.17)-(2.20)$, $(2.21)-(2.25)$ and certain alternating direction methods	264
2.7.2	Interpretation of algorithms $(2.17)-(2.20)$ and $(2.21)-(2.25)$ in terms of the numerical integration of evolution equations	265
2.7.3	Further discussion	265
3.	<i>Applications in finite nonlinear elasticity. (I) Large-displacement calculation of the equilibrium positions of inextensible, flexible pipelines</i>	266
3.1	Formulation of the problem	266
3.1.1	General discussion	266
3.1.2	Simplifying assumptions	267
3.1.3	Modelling of static problems	267
3.2	Results on the existence of solutions for the static problem	268
3.3	Numerical solution of the static problem. (I) General notes	269
3.4	Numerical solution of the static problem. (II) Approximation	270
3.4.1	Approximation of the space $H^2(0,L)$ and the functional J	270
3.4.2	Approximation of δ	271
3.4.3	Approximation of problem (3.2)	272
3.4.4	Convergence of the approximate solutions	273
3.5	Numerical solution of the static problem. (III) Iterative methods of solution	274
3.5.1	General notes and synopsis	274
3.5.2	Solution of problem (3.2) by an augmented Lagrangian method	276

3.5.3 A first iterative method using \mathcal{L}_r	277
3.5.4 A second iterative method using \mathcal{L}_r	278
3.6 Numerical experiments	280
3.6.1 Description of the test problem	280
3.6.2 Further information concerning the numerical solution	280
3.6.3 Presentation of the numerical results	281
3.6.4 Further discussion	284
4. <i>Applications in finite nonlinear elasticity. (II) Two dimensional calculations involving large displacements and large strains for incompressible materials of Mooney-Rivlin type</i>	285
4.1 Synopsis	285
4.2 Formulation of the problem	285
4.2.1 Notation. Mechanical assumptions	285
4.2.2 Mathematical formulations	286
4.2.2.1 Formulation by minimisation of the energy functional	287
4.2.2.2 Formulation by equilibrium equations.	287
4.2.2.3 Formulation by augmented Lagrangian .	288
4.2.2.4 On some relations between formulations (4.6), (4.8) and (4.12) .	288
4.3 Solution of problem (4.12)	289
4.3.1 A first algorithm for solving (4.12)	289
4.3.2 A second algorithm for solving (4.12)	289
4.4 Numerical tests	292
5. <i>Some remarks on the application of the algorithms of Section 2 to the solution of eigenvalue and eigenvector problems</i>	293
<i>Chapter 9 : Applications of the method of multipliers to variational inequalities. D.Gabay.</i>	299
1. <i>Introduction</i>	299
1.1 Monotone operators	299
1.2 The method of multipliers	301
2. <i>The proximal point algorithm</i>	305
3. <i>Variational inequalities in duality</i>	310
4. <i>The method of multipliers for variational inequalities</i> ...	313

5.	<i>Decomposition by multipliers: (I) Alternating direction methods</i>	318
5.1	The Douglas-Rachford variant of the method of multipliers: algorithm ALG2	319
5.2	The Peaceman-Rachford variant of the method of multipliers: algorithm ALG3	323
6.	<i>Decomposition by multipliers: (II) Projection methods</i>	326
7.	<i>General discussion</i>	330
	<i>References</i>	333
