

CONTENTS

I. TOPICS IN SPECTRAL METHODS FOR HYPERBOLIC EQUATIONS

Claudio Canuto

Introduction	1
Spectral Fourier Methods	3
Spectral Chebyshev Methods	11
Spectral Methods for Discontinuous Problems	20
References	30

II. STEADY EULER SIMULATIONS USING UNSTRUCTURED MESHES

A Dervieux

Introduction	34
Notations: The Euler Equations	35
On the Relation between FEM, FVM and FDM	38
A Class of Richtmyer-Galerkin Schemes	46
Upwind Schemes for Unstructured Meshes	79
Implicit Linearized Schemes	91
On Local Mesh Refinements	98
Concluding Remarks	104
References	105

III. HYPERBOLIC CONSERVATION LAWS AND RELATED TOPICS

Tai-Ping Liu

Introduction	113
Hyperbolic Conservation Laws	116
Viscous Conservation Laws	126
Subcharacteristics	134
References	138

IV. A TECHNIQUE FOR INTEGRATING TWO-DIMENSIONAL EULER EQUATIONS

Gino Moretti

Nomenclature and General Equations	141
Discretization of Euler's Equations	143
Quasi-One-Dimensional Problems	144
Treatment of Shocks	147
Merits of the Technique	148
Two-Dimensional Problems	149
Reformulation of the Equations of Motion	150
Orthogonal Frames	153
H-Grids	155
Two-Dimensional Shocks	159
Formation and Tracking of Shocks	162
Transonic Flow Past a Circle, Accelerating from Rest	165
Transonic Airfoils	169
Inlets	174
References	178
