

Contents

Some Preliminary Comments	xiv
--	------------

CHAPTER I

Generalities on Elliptic Variational Inequalities and on Their Approximation	1
---	----------

1. Introduction	1
2. Functional Context	1
3. Existence and Uniqueness Results for EVI of the First Kind	3
4. Existence and Uniqueness Results for EVI of the Second Kind	5
5. Internal Approximation of EVI of the First Kind	8
6. Internal Approximation of EVI of the Second Kind	12
7. Penalty Solution of Elliptic Variational Inequalities of the First Kind	15
8. References	26

CHAPTER II

Application of the Finite Element Method to the Approximation of Some Second-Order EVI	27
---	-----------

1. Introduction	27
2. An Example of EVI of the First Kind: The Obstacle Problem	27
3. A Second Example of EVI of the First Kind: The Elasto-Plastic Torsion Problem	41
4. A Third Example of EVI of the First Kind: A Simplified Signorini Problem	56
5. An Example of EVI of the Second Kind: A Simplified Friction Problem	68
6. A Second Example of EVI of the Second Kind: The Flow of a Viscous Plastic Fluid in a Pipe.	78
7. On Some Useful Formulae	96

CHAPTER III

On the Approximation of Parabolic Variational Inequalities	98
---	-----------

1. Introduction: References	98
2. Formulation and Statement of the Main Results	98
3. Numerical Schemes for Parabolic Linear Equations	99
4. Approximation of PVI of the First Kind	101

5. Approximation of PVI of the Second Kind	103
6. Application to a Specific Example: Time-Dependent Flow of a Bingham Fluid in a Cylindrical Pipe	104
 CHAPTER IV	
Applications of Elliptic Variational Inequality Methods to the Solution of Some Nonlinear Elliptic Equations	110
1. Introduction	110
2. Theoretical and Numerical Analysis of Some Mildly Nonlinear Elliptic Equations	110
3. A Subsonic Flow Problem	134
 CHAPTER V	
Relaxation Methods and Applications	140
1. Generalities	140
2. Some Basic Results of Convex Analysis	140
3. Relaxation Methods for Convex Functionals: Finite-Dimensional Case	142
4. Block Relaxation Methods	151
5. Constrained Minimization of Quadratic Functionals in Hilbert Spaces by Under and Over-Relaxation Methods: Application	152
6. Solution of Systems of Nonlinear Equations by Relaxation Methods	163
 CHAPTER VI	
Decomposition-Coordination Methods by Augmented Lagrangian: Applications	166
1. Introduction	166
2. Properties of (P) and of the Saddle Points of \mathcal{L} and \mathcal{L}_r	168
3. Description of the Algorithms	170
4. Convergence of ALG 1	171
5. Convergence of ALG 2	179
6. Applications	183
7. General Comments	194
 CHAPTER VII	
Least-Squares Solution of Nonlinear Problems: Application to Nonlinear Problems in Fluid Dynamics	195
1. Introduction: Synopsis	195
2. Least-Squares Solution of Finite-Dimensional Systems of Equations	195
3. Least-Squares Solution of a Nonlinear Dirichlet Model Problem	198
4. Transonic Flow Calculations by Least-Squares and Finite Element Methods	211
5. Numerical Solution of the Navier–Stokes Equations for Incompressible Viscous Fluids by Least-Squares and Finite Element Methods	244
6. Further Comments on Chapter VII and Conclusion	318

APPENDIX I

A Brief Introduction to Linear Variational Problems 321

1. Introduction 321

2. A Family of Linear Variational Problems 321

3. Internal Approximation of Problem (P) 326

4. Application to the Solution of Elliptic Problems for Partial Differential Operators 330

5. Further Comments: Conclusion 397

APPENDIX II

A Finite Element Method with Upwinding for Second-Order Problems with Large First- Order Terms 399

1. Introduction 399

2. The Model Problem 399

3. A Centered Finite Element Approximation. 400

4. A Finite Element Approximation with Upwinding 400

5. On the Solution of the Linear System Obtained by Upwinding 404

6. Numerical Experiments 404

7. Concluding Comments 414

APPENDIX III

Some Complements on the Navier–Stokes Equations and Their Numerical Treatment 415

1. Introduction 415

2. Finite Element Approximation of the Boundary Condition $\mathbf{u} = \mathbf{g}$ on Γ if $\mathbf{g} \neq \mathbf{0}$ 415

3. Some Comments On the Numerical Treatment of the Nonlinear Term $(\mathbf{u} \cdot \nabla)\mathbf{u}$ 416

4. Further Comments on the Boundary Conditions 417

5. Decomposition Properties of the Continuous and Discrete Stokes Problems of Sec. 4. Application to Their Numerical Solution 425

6. Further Comments 430

Some Illustrations from an Industrial Application 431
