

CONTENTS

Preface	xi
SECTION 1: CFD ALGORITHMS FOR PARALLEL AND VIRTUAL-PARALLEL ARCHITECTURES	1
Efficiency Considerations for Explicit CFD Solvers on Parallel Computers	3
<i>H.U. Akay and A. Ecer</i>	
1 Introduction	3
2 Euler equations	3
3 Parallel computing environment and explicit solvers	7
4 Efficiency considerations for parallel computations	10
5 Numerical results	13
6 Conclusions	25
References	25
Solving Large Incompressible Time-dependent Flow Problems on Scalable Parallel Systems	27
<i>H. Daniels and A. Peters</i>	
1 Introduction	27
2 The projection-2 method	28
3 The parallel data model	31
4 Applications	36
5 Conclusions	37
References	38
Parallel Finite Element Computation of 3D Compressible Turbomachinery Flows on Workstation Clusters	41
<i>M. Robichaud, W. Habashi, M. Peeters, L. Dutto and M. Fortin</i>	
1 Introduction	41
2 Equations, discretization and solution procedure	43
3 Parallel iterative solver methodology	45
4 Results	48
5 Conclusions	55
References	56

SECTION 2 CFD ALGORITHMS FOR VECTOR-PARALLEL AND MPP ARCHITECTURES	57
Parallel Finite Element Computation of 3D Incompressible Flows on MPPs	59
<i>V. Kalro and T. E. Tezduyar</i>	
1 Introduction	59
2 The governing equations	60
3 Finite element formulations	61
4 Massively parallel implementations	63
5 Numerical simulations	63
6 Conclusions	67
References	68
Iterative Solvers for Coupled 3D Incompressible Flow Problems, on Vector-Parallel Computers and MPPs	83
<i>V. A. Garanzha, P. A. Kolesnikov, I. N. Konshin, V. N. Konshin, A. A. Nikishin, E. E. Tyrtyshnikov and A. Yu Yeremin</i>	
1 Introduction	83
2 The A_SPARSE and CFD_SPARSE solvers	84
3 Conclusions	88
References	89
Parallel Implementation of a Chemical Nonequilibrium Flow Solver on MPPs	91
<i>J. M. Pallis and J. J. Chattot</i>	
1 Introduction	91
2 Governing equations	91
3 Sequential implementation	93
4 Parallel implementation	94
5 Results	95
6 Conclusions	96
References	96
Compressible Navier-Stokes Solvers on MPPs	99
<i>L. Fezoui, S. Lanteri and M. Loriaut</i>	
1 Introduction	99
2 The FEM/FVM Navier-Stokes solver	100
3 Computational and parallel implementation issues	108
4 Performance results on a variety of MPPs	112
5 Conclusions	118
References	120

Performance of a Japanese Vector-Parallel Supercomputer on Large-scale CFD Problems	123
<i>K. Fujii</i>	
1 Introduction	123
2 Architecture of the VPP500	123
3 Performance assessment	124
4 Parallelization of parallel-vector supercomputers	126
5 Computational examples	127
6 Conclusions	129
References	130

SECTION 3 CONVERGENCE ENHANCEMENT TECHNIQUES 1: PRECONDITIONED ITERATIVE SOLVERS FOR IMPLICIT AND FULLY-COUPLED METHODS **139**

Preconditioned Krylov Subspace Methods for CFD Applications **141**

<i>Y. Saad</i>	
1 Introduction	141
2 Preconditioned Krylov subspace methods	142
3 Preconditioning techniques	145
4 Numerical tests	153
5 Conclusions	156
References	156

Hybrid Iterative Solvers and their Application in CFD **159**

<i>H. A. van der Vorst and G. L. G. Sleijpen</i>	
1 Introduction	159
2 Nonsymmetric problems	160
3 Bi-conjugate gradients	160
4 Conjugate gradient square-CGS	163
5 Quasi-minimal residual-QMR	164
6 Bi-conjugate gradient stable-bi-CGSTAB	165
7 GMRES	168
8 Remarks on preconditioning	173
References	174

The Algebraic Multilevel Iteration Method: A Scalable and Optimal Algorithm **177**

<i>O. Axelsson</i>	
1 Introduction	177
2 Scalability of linear solvers	178
3 The algebraic multilevel iteration method	181
4 Scalability of the AMLI methods	185
5 Multilevel iteration methods for nonlinear problems	192

6 Efficient iterative solutions of the nonstationary incompressible Navier-Stokes equations	193
7 Conclusions	198
References	198
Preconditioned Iterative Solvers for the Time-dependent Stokes Problem	201
<i>J. H. Bramble and J. E. Pasciak</i>	
1 Introduction	201
2 Governing equations	202
3 Iterative methods for systems of the form of Eq. (26)	206
4 The preconditioner	211
5 Numerical examples	212
References	215
Orthogonalization-based Iterative Solvers for Generalized Stokes Problems	217
<i>R. Bramley, X. Wang and D. Pelletier</i>	
1 Introduction	217
2 Target application	218
3 Incomplete orthogonalization preconditioners	220
4 Projected Stokes solver	225
5 Numerical testing	229
6 Further work	236
7 Conclusions	237
References	238
Quasi-minimal Residual Iterative Solvers for CFD	239
<i>N. M. Nachtigal and B. D. Semeraro</i>	
1 Introduction	239
2 CFD background	239
3 QMR background	242
4 Numerical examples	245
5 Conclusions	247
References	248
Preconditioned Conjugate Gradient Solvers for Spectral Elements in 3D	249
<i>L. F. Pavarino and O. B. Widlund</i>	
1 Introduction	249
2 Continuous and discrete elliptic problems	251
3 Domain decomposition algorithms	254
4 Iterative substructuring methods	255
5 Schwarz methods with generous overlap	262
6 Schwarz methods with small overlap	263
7 Numerical results	264
References	267

SECTION 4 CONVERGENCE ENHANCEMENT TECHNIQUES 2: DEFECT CORRECTION, MULTIGRID, FORMULATION PRECONDITIONING AND ZONAL METHODS **271**

Defect Correction and Nonlinear Multigrid for the Steady Euler Equations **273**

P. W. Hemker and B. Koren

1 Introduction	273
2 A multigrid approach for the first-order discretization	274
3 Defect correction for higher-order Euler computations	284
References	289

Multigrid Methods for Turbomachinery Navier-Stokes Calculations **293**

A. Arnone

1 Introduction	293
2 Governing equations	294
3 Spatial discretization	296
4 Artificial dissipation	296
5 Basic time-stepping scheme	298
6 Acceleration techniques for steady calculations	299
7 Multigrid time-accurate integration	302
8 Extension to incompressible flows	304
9 Boundary conditions	305
10 Computational grid	306
11 Applications	307
12 Conclusions	315
References	315

Preconditioning Methods for Time-marching Navier-Stokes Solvers **333**

Ch. Hirsch and N. Hakimi

1 Introduction	333
2 Problem formulation	334
3 The central scheme	340
4 Numerical tests	342
5 Conclusions	345
References	345

Finite Element-Finite Volume Simulations of Viscous Flows based on a Zonal Navier-Stokes Formulation; Part 3: Lifting Transonic and Supersonic Flows **355**

C. Y. Tang and M. M. Hafez

1 Introduction	355
----------------	-----

2 Governing equations and zonal approach	355
3 Solution strategy	357
4 Numerical results	359
5 Conclusions	360
References	361

SECTION 5 APPLICATION TO LARGE-SCALE SIMULATION AND DESIGN IN AEROSPACE 373

An Overview of Large-scale Aerospace Applications of CFD 375

R. K. Agarwal

1 Introduction	375
2 Geometry modeling and grid generation	376
3 Flow simulation algorithms	376
4 Turbulence modeling	376
5 Flow simulation examples	377
6 Future directions and challenges	378
References	378

Unstructured Mesh Methods for Aerospace Applications 391

K. Morgan, O. Hassan, J. Peraire and N. P. Weatherill

1 Introduction	391
2 Equations of compressible inviscid flow	392
3 Unstructured mesh solution algorithms	393
4 Unstructured mesh generation	397
5 Algorithmic improvements	401
6 Equations of laminar viscous flow	407
7 Solution algorithm for viscous flow	407
8 Mesh generation for viscous flows	408
9 Conclusions	413
References	413

Aerodynamic Design Methods 417

A. Jameson

1 Introduction	417
2 Aerodynamic design, as a control problem	417
3 Three-dimensional design using the Euler equations	420
4 Implementation for swept wings	426
5 Conclusions	428
References	428

ALPHABETICAL LIST AND AFFILIATION OF AUTHORS 437
