Preface

v

| | |
|--|----|
| CHAPTER 1 | |
| Introduction and Overview | 1 |
| 1.1. Introduction | 1 |
| 1.2. Point Mapping | 3 |
| 1.3. Impulsive Parametric Excitation Problems | 4 |
| 1.4. Cell State Space and Simple Cell Mapping | 6 |
| 1.5. Singularities of Cell Functions | 7 |
| 1.6. Index Theory for Simple Cell Mapping | 8 |
| 1.7. Characteristics of Singularities of Simple Cell Mapping | 9 |
| 1.8. Algorithms for Simple Cell Mapping | 10 |
| 1.9. Applications of Simple Cell Mapping | 10 |
| 1.10. Generalized Cell Mapping | 11 |
| 1.11. Algorithms for Generalized Cell Mapping | 13 |
| 1.12. An Iterative Method of Global Analysis | 14 |
| 1.13. Study of Strange Attractors by Generalized Cell Mapping | 15 |
| 1.14. Other Topics of Study Using the Cell State Space Concept | 15 |
| CHAPTER 2 | |
| Point Mapping | 16 |
| 2.1. Introduction | 16 |
| 2.2. Periodic Solutions and Their Local Stability | 19 |
| 2.3. Bifurcation and Birth of New Periodic Solutions | 21 |
| 2.4. One-Dimensional Maps | 25 |
| 2.5. Second Order Point Mapping | 32 |
| 2.6. Domains of Attraction | 38 |
| 2.7. Chaotic Motions: Liapunov Exponents | 42 |

| | |
|---|----|
| 2.8. Index Theory of N -Dimensional Vector Fields | 43 |
| 2.9. Index Theory of Point Mapping | 46 |

CHAPTER 3**Analysis of Impulsive Parametric Excitation Problems by
Point Mapping**

| | |
|--|----|
| 3.1. Impulsively and Parametrically Excited Systems | 48 |
| 3.2. Linear Systems: Stability and Response | 49 |
| 3.3. A Mechanical System and the Zaslavskii Map | 51 |
| 3.4. A Damped Rigid Bar with an Oscillating Support | 68 |
| 3.5. A Two-Body System Under Impulsive Parametric Excitation | 77 |

CHAPTER 4

| | |
|---|----|
| Cell State Space and Simple Cell Mapping | 85 |
| 4.1. Cell State Space and Cell Functions | 85 |
| 4.2. Simple Cell Mapping and Periodic Motions | 88 |
| 4.3. Bifurcation | 90 |
| 4.4. Domains of Attraction | 91 |
| 4.5. One-Dimensional Simple Cell Mapping Example | 91 |
| 4.6. Two-Dimensional Linear Cell-to-Cell Mappings | 93 |

CHAPTER 5

| | |
|--|-----|
| Singularities of Cell Functions | 98 |
| 5.1. One-Dimensional Cell Functions | 98 |
| 5.2. Two-Dimensional Cell Functions | 100 |
| 5.3. Simplexes and Barycentric Coordinates | 106 |
| 5.4. Regular and Singular Cell Multiplets | 108 |
| 5.5. Some Simple Examples of Singular Multiplets | 113 |

CHAPTER 6

| | |
|---|-----|
| A Theory of Index for Cell Functions | 120 |
| 6.1. The Associated Vector Field of a Cell Function | 120 |
| 6.2. The Index of an Admissible Jordan Cell Surface | 120 |
| 6.3. Indices of Singular Multiplets | 122 |
| 6.4. A Global Result of the Index Theory | 123 |
| 6.5. Some Simple Examples | 124 |

CHAPTER 7

| | |
|--|-----|
| Characteristics of Singular Entities of Simple Cell Mappings | 127 |
| 7.1. Mapping Properties of a Cell Set | 128 |
| 7.2. Neighborhood Mapping Properties of a Set | 130 |
| 7.3. Characteristics of Singular Entities of Simple Cell Mappings | 135 |
| 7.4. Some Applications of the Scheme of Singularity Characterization | 137 |

| | |
|---|-----|
| CHAPTER 8 | |
| Algorithms for Simple Cell Mappings | 139 |
| 8.1. Algorithms for Locating Singularities of Simple Cell Mappings | 139 |
| 8.2. Algorithms for Global Analysis of Simple Cell Mappings | 146 |
| 8.3. A Complete Analysis of a Simple Cell Mapping | 152 |
| CHAPTER 9 | |
| Examples of Global Analysis by Simple Cell Mapping | 153 |
| 9.1. Center Point Method | 153 |
| 9.2. A Method of Compactification | 155 |
| 9.3. A Simple Point Mapping System | 157 |
| 9.4. A van der Pol Oscillator | 164 |
| 9.5. A Hinged Bar Under a Periodic Impulsive Load | 167 |
| 9.6. A Hinged Bar with an Oscillating Support | 171 |
| 9.7. Domains of Stability of Synchronous Generators | 177 |
| 9.8. A Coupled Two Degree-of-Freedom van der Pol System | 195 |
| 9.9. Some Remarks | 207 |
| CHAPTER 10 | |
| Theory of Generalized Cell Mapping | 208 |
| 10.1. Multiple Mapping Image Cells and Their Probabilities | 208 |
| 10.2. A Simple Example | 210 |
| 10.3. Markov Chains | 211 |
| 10.4. Elaboration on Properties of Markov Chains | 221 |
| 10.5. Some Simple Examples | 233 |
| 10.6. Concluding Remarks | 242 |
| CHAPTER 11 | |
| Algorithms for Analyzing Generalized Cell Mappings | 244 |
| 11.1. Outline of the General Procedure and Notation | 244 |
| 11.2. The Pre-Image Array | 247 |
| 11.3. A Pair of Compatible SCM and GCM and a Preliminary Analysis | 248 |
| 11.4. Absorbing Cells | 252 |
| 11.5. Searching for Other Persistent Groups | 252 |
| 11.6. Determination of the Period of a Persistent Group | 257 |
| 11.7. The Limiting Probability Distribution of a Persistent Group | 260 |
| 11.8. Determination of the Transient Groups | 262 |
| 11.9. Absorption Probability and Expected Absorption Time | 263 |
| 11.10. Determination of Single-Domicile and Multiple-Domicile Cells | 264 |
| 11.11. Variations of the Basic Scheme and Possible Improvements | 266 |
| 11.12. Sampling Method of Creating a Generalized Cell Mapping | 268 |
| 11.13. Simple Examples of Applications | 269 |
| CHAPTER 12 | |
| An Iterative Method, from Large to Small | 277 |
| 12.1. An Iterative Procedure | 277 |
| 12.2. Interior-and-Boundary Sampling Method | 283 |

| | |
|--|-----|
| 12.3. A Linear Oscillator Under Harmonic Forcing | 286 |
| 12.4. van der Pol Oscillators | 289 |
| 12.5. Forced Duffing Systems | 292 |
| 12.6. Forced Duffing Systems Involving Strange Attractors | 299 |
| 12.7. Some Remarks | 304 |
| CHAPTER 13 | |
| Study of Strange Attractors by Generalized Cell Mapping | 306 |
| 13.1. Covering Sets of Cells for Strange Attractors | 307 |
| 13.2. Persistent Groups Representing Strange Attractors | 307 |
| 13.3. Examples of Strange Attractors | 310 |
| 13.4. The Largest Liapunov Exponent | 321 |
| CHAPTER 14 | |
| Other Topics of Study Using the Cell State Space Concept | 331 |
| 14.1. Random Vibration Analysis | 331 |
| 14.2. Liapunov Function and Stability Theory of Simple Cell Mapping Systems | 332 |
| 14.3. Digital Control Systems as Mixed Systems | 333 |
| 14.4. Cell Mapping Method of Optimal Control | 333 |
| 14.5. Dynamical Systems with Discrete State Space but Continuous Time | 334 |
| References | 335 |
| List of Symbols | 342 |
| Index | 347 |
