

Contents

1. Introduction. By T.S. HUANG (With 12 Figures)

1.1. What is Picture Processing?	1
1.2. Outline of Book and General References	2
1.3. Two-Dimensional Transforms	3
1.4. Two-Dimensional Digital Filters	7
1.5. Image Enhancement and Restoration	12
1.6. Digital Image Processing Hardware	18
1.7. Other Areas	19
References	19

2. Two-Dimensional Transforms. By H.C. ANDREWS (With 18 Figures)

2.1. Introduction	21
2.1.1. Motivation — Coding, Restoration, Feature Extraction	21
2.1.2. Linear Models	23
2.2. Mathematical Representations	26
2.2.1. Image Representations in Orthogonal Bases	26
2.2.2. Examples of Image Representations	30
2.2.3. Separability and Stacking Operators	36
2.3. Image Coding	43
2.3.1. Spatial Image Coding	43
2.3.2. Transform Image Coding	45
2.4. Object Restoration	51
2.4.1. Separable Space Invariant Point Spread Functions	53
2.4.2. Separable Space Variant Point Spread Functions .	54
2.4.3. Nonseparable Space Invariant Point Spread Functions	62
2.4.4. Nonseparable Space Variant Point Spread Functions	63
2.5. Conclusions	66
References	67

3. Two-Dimensional Nonrecursive Filters. By J. G. FIASCONARO
(With 17 Figures)

3.1. Theory	70
3.1.1. Two-Dimensional Discrete Systems	70
3.1.2. Approximation Theory	73
3.1.3. Linear Programming	83
3.2. Algorithms	88
3.2.1. Window Functions	88
3.2.2. Frequency Sampling	93
3.2.3. Straightforward Application of Linear Programming	98
3.2.4. The New Algorithm	102
3.2.5. Examples and Comparisons	112
3.3. Summary and Conclusions	124
References	128

4. Two-Dimensional Recursive Filtering. By R. R. READ, J. L. SHANKS
and S. TREITEL (With 33 Figures)

4.1. Introduction	131
Definition of a Recursive Filter in Terms of the z-Transform	131
Causality	132
Unit Pulse Response	132
Absolute Stability	133
Initial Conditions	133
4.2. Stability	134
4.2.1. Theorem 1 (SHANKS) and Proof	134
Root Maps	135
Example 1 (Unstable)	135
Example 2 (Stable)	136
Stability Conditions for First-Order Filter	137
Examples	138
4.2.2. Theorem 2 (HUANG) and Proof	138
Test Procedure	140
Huang's Method Using the Hurwitz Test	140
Anderson and Jury Method Using the Schur-Cohn Matrix	140
4.3. Design	141
4.3.1. Extensions of One-Dimensional Techniques	141
Separable Filters	142
The Rotation of One-Dimensional Filters	142
Technique	142
Examples	145
Shifting Two-Dimensional Low-Pass Filters	149

Technique 151
 Examples 153
 4.3.2. Synthesis in the Space Domain 155
 Method 155
 Example 158
 4.3.3. Generalized Approximation and Stabilization . . . 159
 Approximation 159
 Stabilization Procedures 159
 Double Planar Least Squares Inverse 159
 The Two-Dimensional Discrete Hilbert
 Transform 163
 4.4. Implementation 170
 4.4.1. Phase Response of Two-Dimensional Recursive
 Filters 171
 Zero-Phase Cascade 171
 Zero-Phase Sum 171
 4.4.2. State Variable Implementation 172
 Recursive Equations 173
 Comments on Implementation 173
 References 175

5. Image Enhancement and Restoration. By B.R. FRIEDEN
 (With 17 Figures)

5.1. Nomenclature and References, for Non-Optical Fields . 179
 5.2. Preliminary Mathematics, Notation and Definitions . . 179
 5.3. Intuitive Restoring Methods 182
 5.3.1. Matrix Inversion of the Discrete Imaging Equation 183
 5.4. Phillips' Smoothing Method 184
 5.4.1. Derivation 185
 5.4.2. Discussion 185
 5.4.3. Relative Merits for Image-Enhancement Use . . 186
 5.5. Twomey's Generalized Approach 187
 5.5.1. Relative Merits for Image-Enhancement Use . . 188
 5.6. Subsequent Methods 188
 5.7. Linear or Non-Linear Methods? 188
 5.8. Filtering Methods Defined 189
 5.9. Inverse Filtering 191
 5.9.1. An Optimum Processing Bandwidth 193
 5.9.2. Use of Window Functions 195
 5.10. Other ad hoc Linear Methods 196
 5.10.1. DC-Suppression 197
 5.10.2 Suppression of Image-Motion by Convolution Mask 198

5.10.3. Pure Phase Compensation	200
5.10.4. Van Cittert's Method of Successive Convolution	201
5.10.5 Methods of Discrete Deconvolution	203
5.11. Linear Methods Based on a Statistical Approach	206
5.11.1. A Sharpness-Constrained Wiener-Filter Approach	207
Discussion	208
Information Aspect of Optimum Filtering	209
5.11.2. The Backus-Gilbert Optimization Approach	210
5.12. The Possibility of Bandwidth Extrapolation	212
5.13. The Central Role Played a priori Knowledge	214
5.13.1. Knowledge of Limited Spatial Extent	215
Harris' Method	215
Use of an "Extrapolating Window" Function	216
5.13.2. Knowledge of Positivity: Effects on Spurious Oscillation and Resolution	219
5.13.3. Knowledge of an Upper Bound	220
5.14. On Positive-Constrained Restoring Methods in General	221
5.15. Method of SCHELL and BIRAUD	222
5.15.1. Discussion	226
5.16. The Jansson-van Cittert Method	227
5.17. Maximum Entropy Restorations: Two Philosophies, Two Approaches	229
5.18. Burg's Maximum Entropy Solution	231
5.18.1. Discussion	232
5.19. Frieden's Maximum Entropy Solution	234
5.19.1. Discussion	236
5.19.2. Numerical Tests	238
5.20. A Monte Carlo Restoration Technique	240
5.21. Other Approaches	243
5.22. Synopsis of Results	243
5.23. Possible Directions for Future Research	246
References	246

6. Noise Considerations in Digital Image Processing Hardware.

By F. C. BILLINGSLEY (With 16 Figures)

6.1. Effects of Noise on Viewing Analysis	249
6.1.1. Viewing for Esthetics	249
6.1.2. Effects on Data Processing	250
6.1.3. Some Correlative Considerations	253
6.2. Effect of Noise on Quantization	253
6.2.1. Quantizing a Noisy Signal	254
6.2.2. Detectability of Two Areas of Different Brightness	256

6.2.3. Derivation of a Performance Measure	258
6.2.4. System Noise	259
6.2.5. Film Grain Noise	260
6.3. System Bandwidth and Sampling Methods	263
6.3.1. Detector Noise	264
6.3.2. Measurement Accuracy	266
6.4. Practical Cases	270
6.4.1. Case 1: Constant System Parameters	270
6.4.2. Case 2: Variable System Parameters	271
Variable Step Size to Get Constant β	272
Variable Step Size to Get Constant SNR	272
Constant β with Uniform Step Size	273
Constant SNR with Uniform Step Size	274
Modulation of Scanning Light	277
6.5. Summary	279
References	280
Additional References with Titles	283
Subject Index	285
