

	Page
Chapter 1: Matrix Inversion	2
§ 1: The Basic Problem	2
2: Norms of a Vector	3
3: Norm of a Matrix	6
Convergence of Powers of Matrices	13
4: Estimates for Norms of Matrices	14
5: Errors in Matrix Inversion	16
6: Norm of the Inverse of a Matrix	18
7: Iteration Schemes	20
8: Effect of Round-Off Errors	21
9: Error Estimates	22
10,11: Specific Iteration Schemes	23
Case of Definite Hermitian Matrices	25
12,13: Gradient Methods	28
14: Hestenes-Stiefel Conjugate Gradient Method	35
15: Elimination Method	39
Chapter 2: Solutions of Non-Linear Equations and Systems of Equations	 44
§ 1: Sturm's Formula for the Number of Zeros of a Polynomial	 44
2,3: Number of Common Zeros of a Pair of Functions	 46
4: Bernoulli's Method for Zeros of Polynomials and Entire Functions	 54
5: Graeffe Root Squaring Process	62
6,7: Iteration Methods, Newton's Scheme	69
8: Approximation of Eigenvalues of a Matrix	80
Gerschgorin's Results	82
Jacobi's Method	83

Chapter 3:	Approximation of Functions	91
§ 1:	Lagrange Interpolation	91
2:	Analytic Continuation	100
3:	Trigonometric Interpolation	103
Chapter 4:	Solution of Ordinary Differential Equations	107
§ 1:	Difference Approximations	107
2:	Convergence of General Difference Schemes	112
Chapter 5:	Numerical Solution of Partial Differential Equations	121
§ 1:	The Heat Equation in the Infinite Interval	121
2:	Boundary Initial Value-Problems for the Heat Equation	137
3:	Implicit Schemes for the Heat Equation	142
4:	The One-Dimensional Wave Equation	146
5:	Friedrichs' Method for Symmetric Hyperbolic Systems	155
6:	Numerical Solution of the Laplace Equation	161
7:	Solution of Hyperbolic Systems of Equations in Two Independent Variables: Method of Courant, Isaacson, Rees	176
8:	An Elliptic Equation - The Laplacean	183
