<p>Preface 1</p> <p style="text-align: center;">Part One</p> <p style="text-align: center;">NUMERICAL HARMONIC ANALYSIS OF A PERIODIC FUNCTION</p> <p>Chapter 1. HARMONIC ANALYSIS OF A PERIODIC FUNCTION 2</p> <p> §1. Expansion of a periodic function in a Fourier series 2</p> <p> §2. Convergence of Fourier series and conditions for representability of a function by its Fourier series 2</p> <p> §3. Other forms of Fourier series. Parti- cular cases. 3</p> <p> §4. Minimum property of partial sums of a Fourier series. 3</p> <p> §5. Rate of decrease of the Fourier coefficients 4</p> <p>Chapter 2. GENERAL QUADRATURE FORMULAS APPLIED TO FOURIER COEFFICIENTS 6</p> <p> §1. Preliminary remarks 6</p> <p> §2. Cotes formula with constant weighting function 6</p> <p> §3. Conditions for applicability of general quadrature formulas. Methods for improving their precision 7</p> <p>Chapter 3. FORMULAS OF MAXIMUM TRIGO- NOMETRIC DEGREE OF PRECISION 8</p> <p> §1. Assumptions on the function f 8</p> <p> §2. Quadrature formulas of maximum degree of precision 8</p> <p> §3. Application to evaluation of Fourier coefficients 9</p> <p> §4. Grouping schemes and templates . . . 10</p> <p> §5. Quadrature formulas involving derivatives 13</p>	<p>Chapter 4. METHODS BASED ON ALGEBRAIC INTERPOLATION. 14</p> <p> §1. General interpolation formula for integrals with trigonometric factors . . 14</p> <p> §2. Interpolation quadrature formulas for equidistant tabular points 15</p> <p> §3. Interpolation formulas involving derivatives 19</p> <p> §4. Interpolation quadrature formulas for nonequidistant tabular points 21</p> <p> §5. Quadratures of maximum algebraic degree of precision 23</p> <p>Chapter 5. SPECIAL METHODS FOR FOURIER COEFFICIENTS 24</p> <p> §1. Quadrature formulas based on expo- nential interpolation 24</p> <p> §2. Fourier coefficients by iteration 25</p> <p> §3. Numerical integration formulas involving finite differences of the integrands 25</p> <p> §4. Harmonic analysis according to the discontinuities of the function and its derivatives 26</p> <p>Chapter 6. IMPROVING THE PRECISION OF FOURIER COEFFI- CIENTS 27</p> <p> §1. Elimination of the singularities of a function by separating its singular and smooth parts 27</p> <p> §2. Continuous periodic continuation of a function. Increasing the rate of decrease of the coefficients 27</p> <p> §3. Eliminating the discontinuities of the function and its derivatives 28</p>
--	--

Part Two

NUMERICAL HARMONIC ANALYSIS OF NONPERIODIC FUNCTIONS

Chapter 7. FOURIER TRANSFORMS AND THEIR RELATION TO THE FOURIER INVERSION FORMULAS 30

§1. Fourier transforms 30

§2. The Fourier inversion formula and its relation to the Fourier transform 30

Chapter 8. EVALUATION OF THE FOURIER INTEGRAL BY THE USUAL QUADRATURE FORMULAS 33

§1. Interpolation for equidistant tabular points 33

Chapter 9. NUMERICAL FOURIER INTEGRATION BASED ON INTERPOLATION BY RATIONAL FUNCTIONS 36

§1. Interpolation by rational functions 36

§2. General interpolation quadrature formula 37

§3. Quadrature formula with equidistant tabular points 38

§4. Quadrature formulas with roots of orthogonal polynomials as tabular points 38

§5. Evaluation of the integrals

$$\int_0^{\infty} \sin px (1+x)^{-l-\alpha} dx \quad \text{and}$$

$$\int_0^{\infty} \cos px (1+x)^{-l-\alpha} dx \dots\dots\dots 39$$

Chapter 10. FORMULAS OF MAXIMUM DEGREE OF PRECISION. 41

§1. Conditions of applicability and numerical formulas 41

Chapter 11. SPECIAL METHODS FOR FOURIER INTEGRALS 43

Chapter 12. IMPROVED PRECISION IN EVALUATING FOURIER INTEGRALS. 44

§1. Improving differentiability properties 44

§2. Increasing the rate of decrease as $x \rightarrow \infty$ 45

BIBLIOGRAPHY 46

Part Three

NUMERICAL TABLES

Table I. TABULAR POINTS x_k AND VALUES OF D_{ik} AND D'_{ik} FOR WEIGHTS $A_k(\rho)$ IN FORMULAS OF THE TYPE

$$\int_{-1}^1 \sin px f(x) dx \approx \sum_{k=0}^n A_k(\rho) f(x_k), \quad n = 1(1)15, \text{ TO TEN PLACES} \dots\dots\dots 50$$

Table II. WEIGHTS A_{kl} FOR THE NUMERICAL FOURIER TRANSFORM. EQUIDISTANT TABULAR POINTS, $n = 1(1)15$, TO TEN PLACES. 64

Table III. WEIGHTS A_{kl} AND TABULAR POINTS $x_k = \frac{1-t_k}{1+t_k}$, t_k THE ROOTS OF THE LEGENDRE POLYNOMIALS, FOR THE NUMERICAL FOURIER TRANSFORM, $n = 2(1)15$, TO TEN PLACES 72

Table IV. WEIGHTS A_{kl} AND TABULAR POINTS $x_k = \frac{1-t_k}{1+t_k}$, t_k THE ROOTS OF THE CHEBYSHEV POLYNOMIALS OF THE FIRST KIND, FOR THE NUMERICAL FOURIER TRANSFORM, $n = 2(1)15$, TO TEN PLACES. 81

Table V. TABULAR POINTS AND WEIGHTS FOR FORMULA OF MAXIMUM DEGREE OF PRECISION $\int_0^{\infty} (1 + \sin x) f(x) dx \approx \sum_{k=1}^n A_{kf}(x_k)$, $f(x) = \frac{F(x)}{(1+x)^s}$, $|F(x)| < M$, FOR $s = 1.05(0.05)4$, $n = 1(1)10$, TO TEN PLACES. 90

Table VI. TABULAR POINTS AND WEIGHTS FOR FORMULA OF MAXIMUM DEGREE OF PRECISION $\int_0^{\infty} (1 + \cos x) f(x) dx \approx \sum_{k=1}^n A_{kf}(x_k)$, $f(x) = \frac{F(x)}{(1+x)^s}$, $|F(x)| < M$, FOR $s = 1.05(0.05)4$, $n = 1(1)10$, TO TEN PLACES. 121
