Preface ix

CHAPTER 1 Preliminaries

| | |
|--|----|
| 1.0. Introduction | 1 |
| 1.1. Operators Δ and E | 1 |
| 1.2. Negative Powers of Δ | 3 |
| 1.3. Factorial Powers and Discrete Taylor Formulas | 4 |
| 1.4. Bernoulli Numbers and Polynomials | 7 |
| 1.5. Difference Equations | 10 |
| 1.6. Comparison Results | 14 |
| 1.7. Problems | 22 |
| 1.8. Notes | 25 |

CHAPTER 2 Linear Difference Equations

| | |
|---|----|
| 2.0. Introduction | 27 |
| 2.1. Fundamental Theory | 27 |
| 2.2. The Method of Variation of Constants | 32 |
| 2.3. Equations with Constant Coefficients | 34 |
| 2.4. Use of Operators Δ and E | 39 |
| 2.5. Method of Generating Functions | 42 |
| 2.6. Stability of Solutions | 47 |

| | |
|---|----|
| 2.7. Absolute Stability | 49 |
| 2.8. Boundary Value Problems for Second Order Equations | 56 |
| 2.9. Problems | 57 |
| 2.10. Notes | 61 |

CHAPTER 3 Linear Systems of Difference Equations

| | |
|--|----|
| 3.0. Introduction | 63 |
| 3.1. Basic Theory | 63 |
| 3.2. Method of Variation of Constants | 67 |
| 3.3. Systems Representing Higher Order Equations | 69 |
| 3.4. Periodic Solutions | 75 |
| 3.5. Boundary Value Problems | 79 |
| 3.6. Problems | 83 |
| 3.7. Notes | 85 |

CHAPTER 4 Stability Theory

| | |
|--|-----|
| 4.0. Introduction | 87 |
| 4.1. Stability Notions | 87 |
| 4.2. The Linear Case | 90 |
| 4.3. Autonomous Linear Systems | 92 |
| 4.4. Linear Equations with Periodic Coefficients | 93 |
| 4.5. Use of the Comparison Principle | 95 |
| 4.6. Variation of Constants | 99 |
| 4.7. Stability by First Approximation | 102 |
| 4.8. Lyapunov Functions | 104 |
| 4.9. Domain of Asymptotic Stability | 111 |
| 4.10. Converse Theorems | 115 |
| 4.11. Total and Practical Stabilities | 119 |
| 4.12. Problems | 123 |
| 4.13. Notes | 124 |

CHAPTER 5 Applications to Numerical Analysis

| | |
|------------------------|-----|
| 5.0. Introduction | 127 |
| 5.1. Iterative Methods | 127 |
| 5.2. Local Results | 128 |
| 5.3. Semilocal Results | 132 |

| | |
|--|-----|
| 5.4. Unstable Problems: Miller's, Olver's and Clenshaw's Algorithms | 139 |
| 5.5. Unstable Problems: the "SWEEP" Method | 142 |
| 5.6. Monotone Iterative Methods | 144 |
| 5.7. Monotone Iterative Methods (Continued) | 147 |
| 5.8. Problems | 151 |
| 5.9. Notes | 152 |

CHAPTER 6 Numerical Methods for Differential Equations

| | |
|---------------------------------------|-----|
| 6.0. Introduction | 155 |
| 6.1. Linear Multistep Methods | 156 |
| 6.2. Finite Interval | 158 |
| 6.3. Infinite Interval | 161 |
| 6.4. Nonlinear Case | 163 |
| 6.5. Other Techniques | 165 |
| 6.6. The Method of Lines | 166 |
| 6.7. Spectrum of a Family of Matrices | 168 |
| 6.8. Problems | 172 |
| 6.9. Notes | 173 |

CHAPTER 7 Models of Real World Phenomena

| | |
|--|-----|
| 7.0. Introduction | 175 |
| 7.1. Linear Models for Population Dynamics | 175 |
| 7.2. The Logistic Equation | 179 |
| 7.3. Distillation of a Binary Liquid | 182 |
| 7.4. Models from Economics | 185 |
| 7.5. Models of Traffic in Channels | 188 |
| 7.6. Problems | 193 |
| 7.7. Notes | 193 |

Appendix A 195

| | |
|--|-----|
| A.1. Function of Matrices | 195 |
| A.2. Properties of the Component Matrices and Sequences of Matrices | 198 |
| A.3. Integral Form of a Function of Matrix | 203 |

| | |
|---|-----|
| A.4. Jordan Canonical Form | 204 |
| A.5. Norms of Matrices and Related Topics | 207 |
| A.6. Nonnegative Matrices | 209 |
| | |
| Appendix B—The Schur Criterium | 211 |
| | |
| Appendix C—Chebyshev Polynomials | 213 |
| C.1. Definitions | 213 |
| C.2. Properties of $T_n(z)$ and $U_n(z)$ | 214 |
| | |
| Solutions to the Problems | 217 |
| | |
| References | 231 |
| | |
| Index | 239 |
