Preface v

Acknowledgements vii

## 1 Model equations for groundwater flow problems 1

- 1.1 Conservation of mass 1
- 1.2 Darcy's law 2
- 1.3 Sources and sinks 4
- 1.4 Non-Darcy flow 4
- 1.5 Anisotropic media 5
- 1.6 Boundary conditions for saturated flow 7
- 1.7 Two-dimensional (Dupuit) flow in confined and unconfined aquifers 11
- 1.8 Unsaturated flow 15

## 2 Development of the Boundary Integral Equation Method 17

- 2.1 Integral equations in two- and three-dimensional forms 17
- 2.2 Discretization of the two-dimensional boundary into linear elements 23
- 2.3 A numerical example – flow through a rectangular region 26
  - 2.4 Interior solutions 31

## 3 Special elements 34

- 3.1 Singularities and singular elements 34
- 3.2 Flow around a right-angled corner 37
- 3.3 The sheetpile cut-off wall 38
- 3.4 The tailwater singularity 42
  - 3.5 Far field solutions 44
  - 3.6 Sources and sinks 49

<b>4</b>	<b>Zones</b>	<b>50</b>
4.1	The compatibility equations	51
4.2	The sheetpile problem	52
4.3	The interzonal singularity	53
4.4	Anisotropic aquifers	58
<b>5</b>	<b>Two-dimensional free surface flow problems</b>	<b>63</b>
5.1	Free surface boundary conditions in a finite difference form	63
5.2	Matrix formulation and assembly of equations	66
5.3	Free surface flow through a zoned dam	69
5.4	Recharge problems	74
5.5	Accuracy and stability of the time dependent free surface conditions	80
<b>6</b>	<b>Axisymmetric flow problems</b>	<b>86</b>
6.1	Integral equation for axisymmetric problems	86
6.2	Computation of the Green function	88
6.3	Numerical integration of the integral equation	90
6.4	Axisymmetric free surface flow problems	94
<b>7</b>	<b>Three-dimensional problems</b>	<b>111</b>
7.1	Discretization of the integral equation	111
7.2	Simple example	115
7.3	Free surface flow problems	117
7.4	Well problems	128
<b>8</b>	<b>Multiphase flows</b>	<b>134</b>
8.1	Theoretical formulation	134
8.2	The boundary integral equations	137
8.3	Numerical examples for transient problems	139
8.4	Approximate solutions for steady state problems	146
<b>9</b>	<b>A BIEM–finite element combination</b>	<b>150</b>
9.1	The finite element method	150
9.2	Combining the FEM with the BIEM	157
9.3	Reduction of the equations	160
9.4	Numerical examples	161

*Contents*

<b>10</b>	<b>General groundwater problems</b>	<b>170</b>
10.1	Unsteady flow in a confined aquifer	171
10.2	Nearly horizontal flows	183
10.3	Leaky aquifers	184
10.4	Numerical calculations	190
10.5	Unconfined aquifers	199
10.6	Calculations in complex basins	204
<b>11</b>	<b>Programs</b>	<b>212</b>
11.1	GM8	212
11.2	GM9	223
11.3	DAM	231
11.4	General remarks	233
	<b>Appendix</b>	<b>235</b>
A.1	Notation	235
A.2	Matrix notation	237
A.3	Free space Green functions for Laplace's equation	238
A.4	The integrals using linear interpolation	239
A.5	Gaussian quadrature over contours	240
A.6	Gaussian integration over triangular areas	245
	<b>Bibliography</b>	<b>248</b>
	<b>Author index</b>	<b>252</b>
	<b>Subject index</b>	<b>254</b>
