PREFACE ix

INTRODUCTION xii

Part I The Method

1 ONE EQUATION IN ONE UNKNOWN 3

1-1 A Simple Continuation for Solving Quadratic Equations, 3
1-2 Singular Paths and the Independence Principle, 8
1-3 Solving Higher-Degree Equations, 12
1-4 The Geometry of Continuation, 14

2 TWO EQUATIONS IN TWO UNKNOWNS 19

2-1 Introduction, 19
2-2 Second-Degree Equations, 19
2-3 Continuation Equations, 25
2-4 Solutions at Infinity, 27
2-5 Schematics, 31
2-6 CONSOL Experiments, 32
2-7 Higher-Degree Equations, 34

3 GENERAL SYSTEMS 40

3-1 Introduction, 40
3-2 General Systems, 40
3-3 Solutions at Infinity, 45
3-4 Continuation, 60

4 IMPLEMENTATION **72**

4-1 Introduction, 72
4-2 CONSOL-E and CONSOL-A, 74
4-3 Environmental Issues, 79
4-4 Preprocessing, 81
4-5 Path Tracking, 82
4-5-1 *Ways of taking steps along a path*, 82
4-5-2 *Is* t *Just Another Variable?*, 85
4-5-3 *Solving Linear Systems*, 87
4-5-4 *Singular Solutions*, 88
4-5-5 *How Closely Should Paths Be Tracked? What to Do About Path Crossing*, 91
4-5-6 *Stopping Rules. Detecting "Path Failure"*, 93
4-5-7 *"Independent" Constants*, 95
4-5-8 *Using Solution Counting to Save Computer Time*, 96
4-6 Performance Evaluation, 98
4-7 The Experimental Laboratory, 100

5 SCALING **107**

5-1 Introduction, 107
5-2 Two Scaling Algorithms: SCLGEN and SCLCEN, 110
5-3 Computing with SCLGEN and SCLCEN; The Coefficient Tableau, 115

6 OTHER CONTINUATION METHODS **120**

6-1 Introduction, 120
6-2 General Principles, 121
6-3 The Convex–Linear Continuation, 135

Part II Applying the Method

7 REDUCTION **147**

7-1 Introduction, 147
7-2 Reducibility, 149
7-3 The Singularity of the SCLGEN Matrix, 152
7-4 Row Reducing the Coefficient Matrix, 156

8 GEOMETRIC INTERSECTION PROBLEMS 159

8-1 Introduction, 159
8-2 Intersection of Two Curves, 162
8-2-1 *Quadric Curves*, 162
8-2-2 *General Curves*, 171
8-3 Intersection of Three Surfaces, 174
8-3-1 *Introduction*, 174
8-3-2 *Quadric Surfaces*, 175
8-3-3 *General Surfaces*, 185
8-4 Tubes in Space, 187

9 CHEMICAL EQUILIBRIUM SYSTEMS 197

9-1 Introduction, 197
9-2 Simple Illustrative Problem, 198
9-3 The Methodology in General, 203
9-4 Two Combustion Chemistry Examples, 205
9-5 Final Example, 216

10 KINEMATICS OF MECHANISMS 228

10-1 Introduction, 228
10-2 Revolute Joint Planar Manipulators, 229
10-3 Reduction Basics for the Revolute Joint Planar Manipulator, 239
10-4 Revolute Joint Spatial Manipulators, 247

Appendices

1 NEWTON'S METHOD 267

2 EMULATING COMPLEX OPERATIONS IN REAL ARITHMETIC 282

3 SOME REAL-COMPLEX CALCULUS FORMULAS 284

4 PROOFS OF RESULTS FROM CHAPTER 3 291

5 GAUSSIAN ELIMINATION FOR SYSTEM REDUCTION 301

6 COMPUTER PROGRAMS 304
