Contents

Chapter 1	**Fundamentals of Numerical Analysis**	**1**
1.1	Numerical Methods and Their Basic Differences from Analytical Solutions	1
1.2	Interpolation Methods	2
1.3	Numerical Integration	11
1.4	Difference Approximations and Difference Operators	15
1.5	Numerical Integration of Initial Value Problems of Ordinary Differential Equations	19
1.6	Vector and Matrix	27
1.7	Linear Equations	31
1.8	Eigenvalues and Eigenvectors	35
1.9	Similarity Transformation and Jordan Canonical Form	42
Chapter 2	**Computer Solutions for One-Dimensional Eigenvalue Problems**	**52**
2.1	Boundary Value and Eigenvalue Problems Associated with Ordinary Differential Equations	52
2.2	Finite Difference Approximations	54
2.3	Analytical Expression of Eigenvectors and Eigenvalues for a Simple Problem	59
2.4	The Power Method	60
2.5	Wielandt Method	64
2.6	One-Dimensional Schroedinger Equations	66
2.7	One-Dimensional Multigroup Neutron Diffusion Equations	70
2.8	Chebyshev Polynomial Methods	73
Chapter 3	**Iterative Computational Methods for Solving Partial Differential Equations of the Elliptic Type**	**83**
3.1	Partial Differential Equations of the Elliptic Type	83

3.2 Derivation of Finite Difference Equations 84
3.3 Iterative Solution Methods and Their Representations in the Matrix Form 92
3.4 Convergence of Iterative Schemes 100
3.5 Basic Properties of Iterative Matrices 104
3.6 Properties of Jacobi Iterative Methods 110
3.7 Successive-over-relaxation (SOR) Methods 114
3.8 Cyclic Chebyshev Semiiterative Method 118
3.9 Strongly Implicit Method 123
3.10 Two-dimensional Neutron Diffusion Equations 130

Chapter 4 Numerical Solution for Partial Differential Equations of the Parabolic Type 139

4.1 Partial Differential Equation of the Parabolic Type 139
4.2 Derivation of Difference Equations 140
4.3 Stability of the Difference Equations 143
4.4 Truncation Error and Exponential Transformation 146
4.5 The Fourier Stability Analysis 149
4.6 Stability of Parabolic Equations with the Advective Term 153
4.7 Two-dimensional Parabolic Equations 155
4.8 Numerical Solutions of Time-dependent Neutron Diffusion Equations with Delayed Neutrons (One and Two Dimensions) 157

Chapter 5 Computational Fluid Dynamics—I 169

5.1 Experiments or Computations 169
5.2 Derivation of Characteristic Equations for One-dimensional Compressible Flow 171
5.3 Explicit Characteristic Method 175
5.4 Implicit Characteristic Method 179
5.5 Control Volume Method 187
5.6 Vorticity Method for Two-dimensional Incompressible Flow 193
5.7 MAC Method 199

Chapter 6 Weighted Residual Methods and Variational Principle 207

6.1 Variational Principle as a Modern Computational Technique 207

6.2 Weighted Residual Method 208
6.3 Variational Principle and Euler–Lagrange Equation 214
6.4 The Basic Functionals and Direct Methods 217
6.5 Variational Principle for Eigenvalue Problems 222
6.6 Boundary Conditions 225
6.7 Choice of Trial Functions and Use of Piecewise Polynomials 231
6.8 Semidirect Method and Flux Synthesis 234

Chapter 7 Finite Element Methods 245

7.1 Finite Element Versus Finite Difference 245
7.2 Finite Elements and Piecewise Polynomials 246
7.3 Application of the Finite Element Method to an Elliptic Partial Differential Equation 250
7.4 Finite Element Stress Analysis 258
7.5 Derivation of the Finite Element Equations for Viscous Incompressible Fluid Flow 268
7.7 Solution of the Nonlinear Finite Element Equations for Fluid Flow 275

Chapter 8 Coarse-Mesh Rebalancing Method 285

8.1 Rationale of Coarse-Mesh Rebalancing 285
8.2 Partitioning and Weighting 287
8.3 Properties of Coarse-Mesh Rebalancing Equations 294
8.4 Theoretical Analysis of the Coarse-Mesh Rebalancing Effect 299
8.5 Numerical Illustrations 317
8.6 Coarse-mesh Rebalancing Using Additive Corrections 327

Chapter 9 Monte Carlo Methods for Particle Transport and Heat Transfer 333

9.1 Random Walk of Particles 333
9.2 Decision of Events by Random Numbers 336
9.3 Random Walk in the Phase Space 341
9.4 Scoring Methods 348
9.5 Integral Transport Equation and Random Walks 353
9.6 Adjoint Monte Carlo 354
9.7 Nonanalog Monte Carlo 357
9.8 Eigenvalue Problem 365

9.9 Monte Carlo Method for Steady-state Heat-conduction Equations 367
9.10 Monte Carlo Solution of Laplace Equations via the Surface-density Technique 372
9.11 Monte Carlo Method for Transient Heat Conduction 377

Chapter 10 Computational Fluid Dynamics—II 389

10.1 Scope of Computer Simulations for Aerodynamic Flow 389
10.2 Finite Difference Solution to Subsonic Aerodynamic Flow 390
10.3 Transonic Thin Airfoil Perturbation Theory 397
10.4 Iterative Solution of the Transonic Thin Airfoil Perturbation Equation 403
10.5 Semiiterative Solution of the Transonic Equation 406
10.6 Iterative Solution of the Exact Transonic Equation by Successive Relaxation 413
10.7 The Fast Direct Solution (FDS) Methods for the Poisson Equation 418
10.8 The Fast Direct Solution (FDS) for the Cauchy–Rieman Equation 423

Appendices

I. Adjoint Equations and Their Physical Meaning 431
II. Adjoint Equation for the Surface Density Equation 444
III. Integral for Triangular Finite Elements 446
IV. Iterative Schemes for Implicit Methods of Characteristics 448
V. Factorization Formula for the FDS Method 451
