## I. PRELIMINARY DISCUSSIONS 1

1 INTRODUCTION    1

2 THE FINITE-ELEMENT CONCEPT    3  
    2.1 Historical Comment    3

3 MECHANICS OF CONTINUA    5

4 KINEMATIC PRELIMINARIES    5  
    4.1 Geometry and Motion    6  
    4.2 Deformation and Strain    8  
    4.3 Strain Invariants    10  
    4.4 Changes in Volume and Area    11  
    4.5 Velocity, Acceleration, and Deformation Rates    12  
    4.6 Curvilinear Coordinates    13

5 KINETIC PRELIMINARIES    15  
    5.1 Mass and Momentum Principles    15  
    5.2 External Forces and Stress    16  
    5.3 Cauchy's Laws of Motion    18

## II. THEORY OF FINITE ELEMENTS

21

<b>6</b>	<b>INTRODUCTION TO THE CONCEPT OF FINITE ELEMENTS</b>	<b>21</b>
6.1	One-dimensional Domain	22
6.2	Two-dimensional Domain	27
<b>7</b>	<b>FINITE-ELEMENT MODELS OF GENERAL FUNCTIONS</b>	<b>28</b>
7.1	Some Mathematical Preliminaries	28
7.2	Comment on Notation	33
7.3	Discrete Model of the Region $\mathcal{R}$	33
	Compatibility	36
	Multiplicity of Boundary Points	37
7.4	Discrete Model of a Function $F$	37
7.5	Examples	40
	Example 7.1 Scalar-valued Function on a Two-dimensional Domain	40
	Example 7.2 Local Coordinate Transformations	44
	Example 7.3 Vector Fields	46
	Example 7.4 Tensor Fields	48
	Example 7.5 Linear Interpolation	48
<b>8</b>	<b>HIGHER-ORDER REPRESENTATIONS</b>	<b>49</b>
8.1	General Properties of Higher-order Models	49
8.2	Examples	53
	Example 8.1 A Second-order Representation	53
	Example 8.2 Hermite Interpolation	54
<b>9</b>	<b>THEORY OF CONJUGATE APPROXIMATIONS</b>	<b>54</b>
9.1	Conjugate Spaces and Biorthogonal Bases	55
9.2	Conjugate Subspaces	56
	Inner Products and Norms	59
	Affine Transformations	60
	Summary	61
9.3	Best Approximation	61
	Generalization	63
9.4	Some Properties of Conjugate Approximations	54
	Moments and Volumes	65

- 9.5 Linear Operators 66
  - Eigenvalue Problems 68
  - Derivatives of Conjugate Approximations 69
- 9.6 Applications to Finite-element Approximations 71
  - Fundamental Properties 73
- 9.7 Generalized Conjugate Variables 77
- 9.8 Examples 80
  - Example 9.1 Mechanical Work 80
  - Example 9.2 Stress Calculations 80
  - Example 9.3 Two-dimensional Conjugate-approximation Functions 84
  - Example 9.4 Piecewise-linear Approximation Functions of One Variable 86
  - Example 9.5 Polynomials, Analytic Functions 91
  
- 10 FINITE ELEMENTS AND INTERPOLATION FUNCTIONS 93
  - 10.1 Operators on Normed Spaces 94
    - Cauchy Sequences and Completeness 94
    - Linear Operators 97
    - Nonlinear Operators 102
  - 10.2 Finite-element Approximations 106
  - 10.3 Finite-element Models of Operator Equations 117
    - The Ritz Method 118
    - Weighted Residuals 121
    - Galerkin's Method 123
    - Least-squares Approximations 124
  - 10.4 Examples of Finite Elements 125
    - 10.4.1 Simplex Models 126
      - Simplex in Three-dimensional Space 128
      - Simplex in a Two-dimensional Space 129
      - Simplex in a One-dimensional Space 131
      - Curvilinear Simplex Models 131
      - Natural Coordinates 131
    - 10.4.2 Complex Models 133
    - 10.4.3 Multiplex Models 134
      - Bilinear Approximation 134
      - Trilinear Approximation 135
      - Prismatic Elements 137
      - Parallelepiped Elements 137
    - 10.4.4 Isoparametric Elements 137
    - 10.4.5 Examples of Higher-order Elements 140
      - Higher-order Representations in  $\mathcal{E}^1$  140
      - Second-order Representation in  $\mathcal{E}^3$  141

	A Second-order Representation in $\mathcal{E}^2$	141
	A Third-order Representation in $\mathcal{E}^2$	142
	Comments on Other Higher-order Elements	143
10.4.6	Further Remarks on Finite-Element Models	144
<b>11</b>	<b>SELECTED APPLICATIONS</b>	<b>147</b>
11.1	Finite Elements in the Time Domain	148
	Two-dimensional Space-Time	149
	One-dimensional Waves	150
	Stability	152
	Dynamical Systems	153
11.2	Finite Elements in the Complex Plane; Schroedinger's Equation	154
11.3	A Nonlinear Partial Differential Equation	156
11.4	Kinetic Theory of Gases; Boltzmann's Equation	159
	Transient Couette Flow	162
<b>III.</b>	<b>THERMOMECHANICAL BEHAVIOR OF FINITE ELEMENTS OF CONTINUOUS MEDIA</b>	<b>167</b>
<b>12</b>	<b>THERMODYNAMIC PRELIMINARIES</b>	<b>167</b>
12.1	Basic Definitions and Concepts	168
12.2	Conservation of Energy; the First Law	170
12.3	Entropy; the Clausius-Duhem Inequality	173
12.4	Free Energy and Internal Dissipation	175
12.5	Thermodynamic Processes	176
<b>13</b>	<b>THERMOMECHANICS OF A FINITE ELEMENT</b>	<b>176</b>
13.1	Kinematics of a Finite Element	176
13.2	Energy of Finite Elements	180
	Kinetic Energy	181
	Internal Energy	182
	Mechanical Power	183
	Heat	185
13.3	Conservation of Energy in a Finite Element	185
13.4	General Equations of Motion of a Finite Element	185
13.5	Global Forms of the Equations of Motion	186
13.6	Equations of Motion in General Coordinates	189
13.7	Higher-order Representations	192
13.8	Entropy and Heat Conduction in Finite Elements	194

<b>14</b>	<b>CONSTITUTIVE EQUATIONS</b>	<b>197</b>
14.1	Introductory Comments	197
14.2	Physical Admissibility, Determinism, and Equipresence	198
14.3	Local Action	200
14.4	Material Frame Indifference and Symmetry	202
	Other Rules	206
14.5	Constitutive Functionals for Finite Elements	207

#### **IV. FINITE ELASTICITY**

**209**

<b>15</b>	<b>FOUNDATIONS OF THE THEORY OF ELASTICITY</b>	<b>209</b>
15.1	Introductory Remarks	210
15.2	Elastic Materials	210
15.3	Hyperelasticity, Thermodynamic Basis	212
15.4	Total Potentials	216
15.5	The Strain-energy Function	217
	Anisotropic Materials	218
	Polynomial Representation	219
	Isotropic Materials	220
	Incompressible Solids	222
	Integrability Conditions	225
<b>16</b>	<b>FINITE ELEMENTS OF ELASTIC BODIES</b>	<b>226</b>
16.1	Nonlinear Stiffness Relations	226
	Simplex Models	229
	Global Forms	232
16.2	Incompressible Materials	236
	Simplex Models	240
16.3	Generalized Forces and Stresses	242
	Approximations	245
	Stresses	250
16.4	Potential-energy Formulations	251
16.5	Incremental Forms	254
	General Equations	254
	Elastic Elements	257
	Incremental Stiffnesses	258
	Incompressible Elements	260
16.6	Curvilinear Coordinates	261

<b>17</b>	<b>NUMERICAL SOLUTION OF NONLINEAR EQUATIONS</b>	<b>262</b>	
17.1	Introductory Remarks	262	
	Geometrical Properties	263	
	Methods of Solution	265	
17.2	Fixed Points and Contraction Mappings	266	
17.3	Descent and Gradient Minimization Methods	271	
	Univariant Methods	272	
	The Method of Steepest Descent	273	
	Conjugate-gradient Methods	276	
	The Variable-metric Method	277	
17.4	The Newton-Raphson Method	279	
17.5	The Method of Incremental Loading	284	
	Modifications	288	
	Numerical Integration	290	
17.6	Search Methods	292	
	Simplex Search Method	292	
	Nonsequential (Random) Search Methods	295	
<b>18</b>	<b>SELECTED APPLICATIONS</b>	<b>298</b>	
18.1	Plane Stress	298	
	Elastic Membranes	298	
	Membrane Elements	302	
	Stretching of an Elastic Sheet	304	
	Sheet with a Circular Hole	308	
	Uniaxial Stretching of a Sheet with a Circular Hole	312	
	Effect of Form of the Strain-energy Function	314	
	Inflation of Elastic Membranes	318	
18.2	Incompressible Elastic Solids of Revolution	321	
	Finite-element Approximations	322	
	Simplified Forms	323	
	The Infinite-cylinder Problem	325	
	Thick-walled Container	332	
	Bending and Inflation of a Circular Plate	333	
18.3	Finite-plane Strain	338	
	Finite-element Approximations	339	
	Simple and Generalized Shear	339	
	Plane Body with Circular Hole	342	
<b>V.</b>	<b>NONLINEAR THERMOMECHANICAL BEHAVIOR</b>		<b>345</b>
<b>19</b>	<b>THERMOMECHANICS OF MATERIALS WITH MEMORY</b>	<b>345</b>	
19.1	Thermodynamics of Simple Materials	346	
	Smoothness Properties of Functionals	348	

Fading Memory 351  
Some Basic Properties of Thermomechanically Simple  
Materials 351

19.2 Special Forms of the Constitutive Equations for Simple  
Materials 354  
Thermorheologically Simple Materials 359  
Thermoelasticity 362

**20 FINITE-ELEMENT MODELS OF NONLINEAR  
THERMOMECHANICAL BEHAVIOR 366**

20.1 Finite Elements of Materials with Memory 366  
20.2 Application to Thermorheologically Simple Materials, 369  
An Example—Transient Response of a Thermoviscoelastic  
Thick-walled Cylinder 374  
20.3 Applications in Nonlinear Coupled Thermoelasticity 379  
An Example—A Nonlinearly Thermoelastic Half-space 379
